The Deloitte Accounting Research Tool (DART) is a comprehensive online library of accounting and financial disclosures literature. <u>iGAAP on DART</u> allows access to the full IFRS Standards, linking to and from:

- Deloitte's authoritative, up-to-date iGAAP manuals which provide guidance for reporting under IFRS Standards
- illustrative financial statements for entities reporting under IFRS Accounting Standards.

In addition, our <u>sustainability reporting</u> volumes of iGAAP provide guidance on disclosure requirements and recommendations which businesses must consider in light of the broader sustainability matters which can significantly drive the value of an entity.

To apply for a subscription to iGAAP on DART, click <u>here</u> to start the application process and select the iGAAP package.

For more information about iGAAP on DART, including pricing of the subscription packages, click here.

Deloitte's IAS Plus (www.iasplus.com) is one of the most comprehensive sources of global financial reporting news on the web. It is a central repository for information about International Financial Reporting Standards (IFRS) as well as the activities of the International Accounting Standards Board (IASB) and the International Sustainability Standards Board (ISSB). The site, which is also available in German, includes portals tailored to the United Kingdom and Canada (available in English and French), each with a focus on local GAAP and jurisdiction-specific corporate reporting requirements.

IAS Plus features:

- · news about global reporting developments, presented intuitively with related news, publications, events and more
- <u>summaries of all IFRS Standards, Interpretations and projects</u>, with complete histories of developments and standard-setter discussions together with related news and publications
- <u>rich jurisdiction-specific information</u>, including background and reporting requirements, links to country-specific resources, related news and publications and a comprehensive history of the adoption of IFRS Accounting Standards around the world
- · detailed personalisation of the site, which is available by selecting particular topics of interest and tailored views of the site
- <u>dedicated resource pages</u> for the IASB and the ISSB, including their advisory bodies
- important dates highlighted throughout the site for upcoming meetings, deadlines and more
- <u>a library of IFRS-related publications</u> available for download and subscription including our popular <u>iGAAP in Focus</u> newsletters and other publications
- IFRS Illustrative Financial Statements
- <u>Deloitte comment letters</u> to the IASB, ISSB and numerous other bodies
- an extensive electronic library of both global and jurisdiction-specific IFRS resources
- e-learning modules for most IFRS Accounting Standards
- enhanced search functionality, allowing easy access to topics of interest by tags, categories or free text searches, with search results intuitively presented by category with further filtering options
- a mobile-friendly interface and updates through X.

The illustrative financial statements of International GAAP Holdings Limited for the year ended 31 December 2024 are intended to illustrate the presentation and disclosure requirements of IFRS Accounting Standards without the use of any actual numbers. They also contain additional disclosures that are considered to be best practice, particularly where such disclosures are included in illustrative examples provided within a specific standard.

International GAAP Holdings Limited is assumed to have presented financial statements in accordance with IFRS Accounting Standards for a number of years. Therefore, it is not a first-time adopter of IFRS Accounting Standards. Readers should refer to IFRS 1 First-time Adoption of International Financial Reporting Standards for specific requirements regarding an entity's first IFRS financial statements.

It is further assumed that International GAAP Holdings Limited does not qualify as an investment entity as defined in IFRS 10 *Consolidated Financial Statements* and does not have any contracts that meet the definition of an insurance contract under IFRS 17 *Insurance Contracts*. Illustrative disclosures for entities applying IFRS 17 are available in Deloitte's publication <u>Illustrative disclosures for insurers applying IFRS 17.</u>

The illustrative financial statements demonstrate the impact of the application of the amendments to IFRS Accounting Standards that were issued on or before 15 May 2024 and are mandatorily effective for the annual period beginning on 1 January 2024. Accordingly, the illustrative financial statements do not demonstrate the impact of the application of new and revised IFRS Accounting Standards that are not yet mandatorily effective on 1 January 2024. As an exception to these dates, note 6 explains the agenda decision *Disclosure of Revenues and Expenses for Reportable Segments* published by the IFRS Interpretations Committee in the June 2024.

The illustrative financial statements do not include separate financial statements for the parent, which may be required by local laws or regulations, or may be prepared voluntarily. Where an entity presents separate financial statements that comply with IFRS Accounting Standards, the requirements of IAS 27 Separate Financial Statements will apply. Separate statements of profit or loss and other comprehensive income, financial position, changes in equity and cash flows for the parent will generally be required, together with supporting notes.

Further, these illustrative financial statements assume that neither the parent company nor its subsidiaries are entities whose functional currency is the currency of a hyperinflationary economy.

In addition, the illustrative financial statements have been presented without regard to local laws or regulations. Preparers of financial statements will need to ensure that the options selected under IFRS Accounting Standards do not conflict with such sources of regulation (e.g. the revaluation of assets is not permitted under certain reporting regimes—but these financial statements illustrate the presentation and disclosures required when an entity adopts the revaluation model under IAS 16 *Property, Plant and Equipment*). In addition, local laws or securities regulations may specify disclosures in addition to those required by IFRS Accounting Standards (e.g. in relation to directors' remuneration). Preparers of financial statements will consequently need to adapt the illustrative financial statements to comply with such additional local requirements.

Suggested disclosures are cross-referenced to the underlying requirements in the texts of the relevant standards and interpretations.

For the purposes of presenting the statements of profit or loss and other comprehensive income and cash flows, the alternatives allowed under IFRS Accounting Standards for those statements have been illustrated. Preparers should select the alternatives most appropriate to their circumstances and apply the chosen presentation method consistently.

Note that in these illustrative financial statements, we have frequently included line items that are not applicable to International GAAP Holdings Limited, so as to illustrate items that are commonly encountered in practice. This does not mean that we have illustrated all possible disclosures, nor should it be taken to mean that entities are required to display such line items in practice.

Areas that could be affected by climate change are marked with a icon in the margin. The icon indicates that disclosures might need to be adapted to explain how risks and uncertainties arising from climate change or the transition to a lower carbon economy could impact on the financial statements. The table in Appendix 1 gives an overview of all areas affected by climate change.

Commentary:

One statement vs. two statements

IAS 1 Presentation of Financial Statements permits an entity to present profit or loss and other comprehensive income (OCI) in either a single statement or in two separate but consecutive statements. The alternative presented above illustrates the presentation of profit or loss and OCI in two separate but consecutive statements with expenses analysed by function. The alternative presented on the following pages illustrates the presentation of profit or loss and OCI in one statement with expenses analysed by nature.

Whichever presentation approach is adopted, the distinction is retained between items recognised in profit or loss and items recognised in OCI. Under both approaches, profit or loss, total OCI, as well as comprehensive income for the period (being the total of profit or loss and OCI) should be presented. Under the two-statement approach, the separate statement of profit or loss ends at 'profit for the year', and this 'profit for the year' is then the starting point for the statement of comprehensive income. In addition, the analysis of 'profit for the year' between the amount attributable to the owners of the parent company and the amount attributable to non-controlling interests is presented as part of the separate statement of profit or loss.

Note that where the two-statement approach is adopted (as above), as required by IAS 1:10A, the statement of profit or loss must be displayed immediately before the statement of comprehensive income.

International GAAP Holdings Limited

Commentary:

OCI: items that may or may not be reclassified

Irrespective of whether the one-statement or the two-statement approach is followed, the items of OCI should be classified by nature and grouped into those that, in accordance with other IFRS Accounting Standards: (a) will not be reclassified subsequently to profit or loss; and (b) may be reclassified subsequently to profit or loss when specific conditions are met. An entity should present its share of OCI of associates and joint ventures accounted for using the equity method separately from those arising from the group.

Presentation options for reclassification adjustments

In addition, in accordance with IAS 1:94, an entity may present reclassification adjustments in the statement of profit or loss and other comprehensive income or in the notes. In these illustrative financial statements the reclassification adjustments have been presented in the notes.

Presentation options for income tax relating to items of OCI

Furthermore, for items of OCI, additional presentation options are available as follows: the individual items of OCI may be presented net of tax in the statement of profit or loss and other comprehensive income, or they may be presented gross with a single line deduction for tax relating to those items by allocating the tax between the items that may be reclassified subsequently to the profit or loss section and those that will not be reclassified subsequently to the profit or loss section as presented in these illustrative financial statements. Whichever option is selected, the income tax relating to each item of OCI must be disclosed, either in the statement of profit or loss and other comprehensive income or in the notes (see note 13).

Subtotals

When an entity presents subtotals, IAS 1:85A requires that those subtotals:

- Comprise of line items made up of amounts recognised and measured in accordance with IFRS Accounting Standards
- Be presented and labelled in a manner that makes the line items that constitute the subtotal clear and understandable
- Be consistent from period to period
- Not be displayed with more prominence than the subtotals and totals required in IFRS Accounting Standards

Immaterial items

An entity need not provide a specific disclosure required by an IFRS Accounting Standard if the information resulting from that disclosure is not material. This is the case even if the IFRS Accounting Standard contains a list of specific requirements or describes them as minimum requirements.

Commentary:

IAS 1:40A requires an entity to present a statement of financial position as at the beginning of the preceding period (third statement of financial position) if:

- it applies an accounting policy retrospectively, makes a retrospective restatement of items in its financial statements or reclassifies items in its financial statements
- the retrospective application, retrospective restatement or the reclassification has a material effect on the information in the third statement of financial position.

Other than disclosures of certain specified information as required by IAS 1:41-44 and IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors the related notes to the third statement of financial position are not required to be disclosed.

instruments, other assets or services.

International GAAP Holdings Limited

to IAS 1
Presentation
of Financial
Statements—
Non-current
Liabilities with

Covenants

Amendments The group has adopted the amendments to IAS 1, published in November 2022, for the first time in the to IAS 1 current year.

The amendments specify that only covenants that an entity is required to comply with on or before the end of the reporting period affect the entity's right to defer settlement of a liability for at least twelve months after the reporting date (and therefore must be considered in assessing the classification of the liability as current or non-current). Such covenants affect whether the right exists at the end of the reporting period, even if compliance with the covenant is assessed only after the reporting date (e.g. a covenant based on the entity's financial position at the reporting date that is assessed for compliance only after the reporting date).

The IASB also specifies that the right to defer settlement of a liability for at least twelve months after the reporting date is not affected if an entity only has to comply with a covenant after the reporting period. However, if the entity's right to defer settlement of a liability is subject to the entity complying with covenants within twelve months after the reporting period, an entity discloses information that enables users of financial statements to understand the risk of the liabilities becoming repayable within twelve months after the reporting period. This would include information about the covenants (including the nature of the covenants and when the entity is required to comply with them), the carrying amount of related liabilities and facts and circumstances, if any, that indicate that the entity may have difficulties complying with the covenants.

Amendments to IFRS 16 Leases—Lease Liability in a Sale and Leaseback

Amendments The group has adopted the amendments to IFRS 16 for the first time in the current year.

The amendments to IFRS 16 add subsequent measurement requirements for sale and leaseback transactions that satisfy the requirements in IFRS 15 *Revenue from Contracts with Customers* to be accounted for as a sale. The amendments require the seller-lessee to determine 'lease payments' or 'revised lease payments' such that the seller-lessee does not recognise a gain or loss that relates to the right of use retained by the seller-lessee, after the commencement date.

The amendments do not affect the gain or loss recognised by the seller-lessee relating to the partial or full termination of a lease. Without these new requirements, a seller-lessee may have recognised a gain on the right of use it retains solely because of a remeasurement of the lease liability (for example, following a lease modification or change in the lease term) applying the general requirements in IFRS 16. This could have been particularly the case in a leaseback that includes variable lease payments that do not depend on an index or rate.

As part of the amendments, the IASB amended an Illustrative Example in IFRS 16 and added a new example to illustrate the subsequent measurement of a right-of-use asset and lease liability in a sale and leaseback transaction with variable lease payments that do not depend on an index or rate. The illustrative examples also clarify that the liability that arises from a sale and leaseback transaction that qualifies as a sale applying IFRS 15 is a lease liability.

A seller-lessee applies the amendments retrospectively in accordance with IAS 8 to sale and leaseback transactions entered into after the date of initial application, which is defined as the beginning of the annual reporting period in which the entity first applied IFRS 16.

IAS 8:30-31

New and revised IFRS Accounting Standards in issue but not yet effective

Commentary:

Entities are required to disclose in their financial statements the potential impact of new and revised IFRS Accounting Standards that have been issued but are not yet effective. The disclosures below reflect a cut off date of 15 May 2024. The potential impact of the application of any new and revised IFRS Accounting Standard issued by the IASB after 15 May 2024 but before the financial statements are issued should also be considered and disclosed. The impact of the application of the new and revised IFRS Accounting Standards (see below) is for illustrative purposes only. Entities should analyse the impact based on their specific facts and circumstances.

At the date of authorisation of these financial statements, the group has not applied the following new and revised IFRS Accounting Standards that have been issued but are not yet effective [and [in some cases] have not yet been adopted by the [relevant body]]:

Amendments to IAS 21 Lack of Exchangeability

IFRS 18Presentation and Disclosures in Financial StatementsIFRS 19Subsidiaries without Public Accountability: Disclosures

The directors do not expect that the adoption of the standards listed above will have a material impact on the financial statements of the group in future periods, except if indicated below.

International GAAP Holdings Limited

Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates titled Lack of Exchangeability

The amendments specify how to assess whether a currency is exchangeable, and how to determine the exchange rate when it is not.

The amendments state that a currency is exchangeable into another currency when an entity is able to obtain the other currency within a time frame that allows for a normal administrative delay and through a market or exchange mechanism in which an exchange transaction would create enforceable rights and obligations.

An entity assesses whether a currency is exchangeable into another currency at a measurement date and for a specified purpose. If an entity is able to obtain no more than an insignificant amount of the other currency at the measurement date for the specified purpose, the currency is not exchangeable into the other currency.

The assessment of whether a currency is exchangeable into another currency depends on an entity's ability to obtain the other currency and not on its intention or decision to do so.

When a currency is not exchangeable into another currency at a measurement date, an entity is required to estimate the spot exchange rate at that date. An entity's objective in estimating the spot exchange rate is to reflect the rate at which an orderly exchange transaction would take place at the measurement date between market participants under prevailing economic conditions.

The amendments do not specify how an entity estimates the spot exchange rate to meet that objective. An entity can use an observable exchange rate without adjustment or another estimation technique. Examples of an observable exchange rate include:

- a spot exchange rate for a purpose other than that for which an entity assesses exchangeability
- the first exchange rate at which an entity is able to obtain the other currency for the specified purpose after exchangeability of the currency is restored (first subsequent exchange rate).

An entity using another estimation technique may use any observable exchange rate—including rates from exchange transactions in markets or exchange mechanisms that do not create enforceable rights and obligations—and adjust that rate, as necessary, to meet the objective as set out above.

When an entity estimates a spot exchange rate because a currency is not exchangeable into another currency, the entity is required to disclose information that enables users of its financial statements to understand how the currency not being exchangeable into the other currency affects, or is expected to affect, the entity's financial performance, financial position and cash flows.

The amendments add a new appendix as an integral part of IAS 21. The appendix includes application guidance on the requirements introduced by the amendments. The amendments also add new Illustrative Examples accompanying IAS 21, which illustrate how an entity might apply some of the requirements in hypothetical situations based on the limited facts presented.

In addition, the IASB made consequential amendments to IFRS 1 to align with and refer to the revised IAS 21 for assessing exchangeability.

The amendments are effective for annual reporting periods beginning on or after 1 January 2025, with earlier application permitted. An entity is not permitted to apply the amendments retrospectively. Instead, an entity is required to apply the specific transition provisions included in the amendments.

The directors of the company anticipate that the application of these amendments may have an impact on the group's consolidated financial statements in future periods.

IFRS 18 Presentation and Disclosures in Financial Statements

IFRS 18 replaces IAS 1, carrying forward many of the requirements in IAS 1 unchanged and complementing them with new requirements. In addition, some IAS 1 paragraphs have been moved to IAS 8 and IFRS 7. Furthermore, the IASB has made minor amendments to IAS 7 and IAS 33 *Earnings per Share*.

IFRS 18 introduces new requirements to:

- present specified categories and defined subtotals in the statement of profit or loss
- provide disclosures on management-defined performance measures (MPMs) in the notes to the financial statements
- improve aggregation and disaggregation.

Source International GAAP Holdings Limited

An entity is required to apply IFRS 18 for annual reporting periods beginning on or after 1 January 2027, with earlier application permitted. The amendments to IAS 7 and IAS 33, as well as the revised IAS 8 and IFRS 7, become effective when an entity applies IFRS 18. IFRS 18 requires retrospective application with specific transition provisions.

The directors of the company anticipate that the application of these amendments may have an impact on the group's consolidated financial statements in future periods.

IFRS 19 Subsidiaries without Public Accountability: Disclosures

IFRS 19 permits an eligible subsidiary to provide reduced disclosures when applying IFRS Accounting Standards in its financial statements.

A subsidiary is eligible for the reduced disclosures if it does not have public accountability and its ultimate or any intermediate parent produces consolidated financial statements available for public use that comply with IFRS Accounting Standards.

IFRS 19 is optional for subsidiaries that are eligible and sets out the disclosure requirements for subsidiaries that elect to apply it.

An entity is only permitted to apply IFRS 19 if, at the end of the reporting period:

- it is a subsidiary (this includes an intermediate parent)
- it does not have public accountability, and
- its ultimate or any intermediate parent produces consolidated financial statements available for public use that comply with IFRS Accounting Standards.

A subsidiary has public accountability if:

- its debt or equity instruments are traded in a public market or it is in the process of issuing such instruments for trading in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets), or
- it holds assets in a fiduciary capacity for a broad group of outsiders as one of its primary businesses (for example, banks, credit unions, insurance entities, securities brokers/dealers, mutual funds and investment banks often meet this second criterion).

Eligible entities can apply IFRS 19 in their consolidated, separate or individual financial statements. An eligible intermediate parent that does not apply IFRS 19 in its consolidated financial statement may do so in its separate financial statements.

The new standard is effective for reporting periods beginning on or after 1 January 2027 with earlier application permitted. If an entity elects to apply IFRS 19 for a reporting period earlier than the reporting period in which it first applies IFRS 18, it is required to apply a modified set of disclosure requirements set out in an appendix to IFRS 19. If an entity elects to apply IFRS 19 for an annual reporting period before it applied the amendments to IAS 21, it is not required to apply the disclosure requirements in IFRS 19 with regard to *Lack of Exchangeability*.

The directors of the company do not anticipate that IFRS 19 will be applied for purposes of the consolidated financial statements of the group.

Commentary:

IAS 8:30 requires entities to give known or reasonably estimable information relevant to assessing the possible impact that the application of any new or revised IFRS Accounting Standard will have on the entity's financial statements in the period of initial application. The regulatory requirements in the various jurisdictions may differ as to how detailed the disclosures need to be; some regulators may require both qualitative and quantitative information to be disclosed whereas others may consider that qualitative information (e.g. key areas that may be affected by the new or revised IFRS Accounting Standard) suffices in many circumstances. For this reason, relevant regulatory guidance should also be taken into account in preparing the disclosure.

This applies to all new or revised IFRS Accounting Standards that have been issued but are not yet effective.

International GAAP Holdings Limited

IAS 1:112(a)

3. Accounting policies

Commentary:

Entities are required to disclose material accounting policy information. Accounting policy information is material if it can reasonably be expected to influence decisions that the primary users of financial statements make on the basis of those financial statements when considered together with other information included in the financial statements.

Accounting policy information is expected to be material if the users of the financial statements need the information to understand other material information in the financial statements. For example, accounting policy information is likely to be considered material if the information relates to material transactions, other events or conditions and the accounting policy:

- has changed during the period resulting in a material change to the information in the financial statements
- was chosen from alternatives permitted by IFRS Accounting Standards
- was developed in accordance with IAS 8 in the absence of an IFRS Accounting Standard which specifically applies
- relates to an area for which the entity is required to make significant judgements and assumptions which are disclosed in accordance with IAS 1:122 and 125
- relates to complex accounting for which users of the financial statements would otherwise not understand the relating transactions, other events or conditions.

Accounting policy information which relates to immaterial transactions, other events or conditions is immaterial and does not need to be disclosed. However, there may be accounting policy information which is considered material due to the nature of related transactions, other events or conditions even if the amounts are immaterial. Conversely, accounting policy information relating to material transactions, other events or conditions should not necessarily be considered material.

IAS 1:117C notes that accounting policy information which is entity-specific, focusing on how the entity has applied the requirements of IFRS Accounting Standards to its own circumstances, is more useful to users of the financial statements than standardised information or information which duplicates or summarises the requirements of the relevant IFRS Accounting Standards.

If an entity chooses to disclose immaterial accounting policy information, that information should not obscure material accounting policy information. Further, if an entity concludes that accounting policy information is immaterial, that conclusion does not affect the related disclosure requirements of other IFRS Accounting Standards.

Please note that the accounting policy information included in this document is provided for illustrative purposes, without an assessment of its materiality.

IAS 1:16 IAS 1:17(b) IAS 1:112(a) IAS 1:117-117E

Basis of accounting

The financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS Accounting Standards).

Commentary:

The above statement should be tailored to be specific to the entity.

Most jurisdictions have a mechanism for incorporating IFRS Accounting Standards into their financial reporting system. These mechanisms range from direct adoption of 'IFRS Accounting Standards as issued by the IASB', through adopting local standards that are 'equivalent to IFRS Accounting Standards', to the extensive endorsement mechanism used, for example, in the European Union and the United Kingdom.

The accounting policies adopted are set out below.

Source International GAAP Holdings Limited

IAS 1:25

Going concern

The directors have, at the time of approving the financial statements, a reasonable expectation that the group has adequate resources to continue in operational existence for the foreseeable future. Thus, the group has applied the going concern basis of accounting in preparing the financial statements.

Basis of consolidation

The consolidated financial statements incorporate the financial statements of the parent company and entities controlled by the group made up to 31 December each year. Control is achieved when the group:

- has power over the investee
- is exposed, or has rights, to variable returns from its involvement with the investee
- has the ability to use its power to affect its returns.

The group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above.

When the group has less than a majority of the voting rights of an investee, it considers that it has power over the investee when the voting rights are sufficient to give it the practical ability to direct the relevant activities of the investee unilaterally. The group considers all relevant facts and circumstances in assessing whether or not the group's voting rights in an investee are sufficient to give it power, including:

- the size of the group's holding of voting rights relative to the size and dispersion of holdings of the other vote holders
- potential voting rights held by the group, other vote holders or other parties
- rights arising from other contractual arrangements
- any additional facts and circumstances that indicate that the group has, or does not have, the current ability to direct
 the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders'
 meetings.

Consolidation of a subsidiary begins when the group obtains control over the subsidiary and ceases when the group loses control of the subsidiary. Specifically, the results of subsidiaries acquired or disposed of during the year are included in profit or loss from the date the group gains control until the date when the group ceases to control the subsidiary.

Where necessary, adjustments are made to the financial statements of subsidiaries to bring the accounting policies used into line with the group's accounting policies.

All intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between the members of the group are eliminated on consolidation.

Non-controlling interests in subsidiaries are identified separately from the group's equity therein. Those interests of non-controlling shareholders that are present ownership interests entitling their holders to a proportionate share of net assets upon liquidation may initially be measured at fair value or at the non-controlling interests' proportionate share of the fair value of the acquiree's identifiable net assets. The choice of measurement is made on an acquisition-by-acquisition basis. Other non-controlling interests are initially measured at fair value. Subsequent to acquisition, the carrying amount of non-controlling interests is the amount of those interests at initial recognition plus the non-controlling interests' share of subsequent changes in equity.

Profit or loss and each component of other comprehensive income are attributed to the owners of the parent company and to the non-controlling interests. Total comprehensive income of the subsidiaries is attributed to the owners of the parent company and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

^{*}This icon indicates that this area of the illustrative financial statements may be affected by the effects of climate change. Please see the table in Appendix 1 to see how this area may be affected. For areas affected by the effects of climate change, it would be expected that the entity discusses in its disclosures how the area is affected.

International GAAP Holdings Limited

Changes in the group's interests in subsidiaries that do not result in a loss of control are accounted for as equity transactions. The carrying amount of the group's interests and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries. Any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received is recognised directly in equity and attributed to the owners of the parent company.

When the group loses control of a subsidiary, the gain or loss on disposal recognised in profit or loss is calculated as the difference between (i) the aggregate of the fair value of the consideration received and the fair value of any retained interest and (ii) the previous carrying amount of the assets (including goodwill), less liabilities of the subsidiary and any non-controlling interests. All amounts previously recognised in other comprehensive income in relation to that subsidiary are accounted for as if the group had directly disposed of the related assets or liabilities of the subsidiary (i.e. reclassified to profit or loss or transferred to another category of equity as required/permitted by applicable IFRS Accounting Standards). The fair value of any investment retained in the former subsidiary at the date when control is lost is regarded as the fair value on initial recognition for subsequent accounting under IFRS 9 *Financial Instruments* when applicable, or the cost on initial recognition of an investment in an associate or a joint venture.

Business combinations

Acquisitions of businesses are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of assets transferred by the group, liabilities incurred by the group to the former owners of the acquiree and the equity interest issued by the group in exchange for control of the acquiree. Acquisition-related costs are recognised in profit or loss as incurred.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognised at their fair value at the acquisition date, except that:

- deferred tax assets or liabilities and assets or liabilities related to employee benefit arrangements are recognised and measured in accordance with IAS 12 *Income Taxes* and IAS 19 *Employee Benefits* respectively
- liabilities or equity instruments related to share-based payment arrangements of the acquiree or share-based payment arrangements of the group entered into to replace share-based payment arrangements of the acquiree are measured in accordance with IFRS 2 *Share-based Payment* at the acquisition date (see below)
- assets (or disposal groups) that are classified as held for sale in accordance with IFRS 5 Non-current Assets Held for Sale and Discontinued Operations are measured in accordance with that standard.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree, and the fair value of the acquirer's previously held equity interest in the acquiree (if any) over the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed. If, after reassessment, the net of the acquisition-date amounts of the identifiable assets acquired and liabilities assumed exceeds the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree and the fair value of the acquirer's previously held interest in the acquiree (if any), the excess is recognised immediately in profit or loss as a bargain purchase gain.

When the consideration transferred by the group in a business combination includes a contingent consideration arrangement, the contingent consideration is measured at its acquisition-date fair value and included as part of the consideration transferred in a business combination. Changes in fair value of the contingent consideration that qualify as measurement period adjustments are adjusted retrospectively, with corresponding adjustments against goodwill. Measurement period adjustments are adjustments that arise from additional information obtained during the 'measurement period' (which cannot exceed one year from the acquisition date) about facts and circumstances that existed at the acquisition date.

The subsequent accounting for changes in the fair value of the contingent consideration that do not qualify as measurement period adjustments depends on how the contingent consideration is classified. Contingent consideration that is classified as equity is not remeasured at subsequent reporting dates and its subsequent settlement is accounted for within equity. Other contingent consideration is remeasured to fair value at subsequent reporting dates with changes in fair value recognised in profit or loss.

International GAAP Holdings Limited

When a business combination is achieved in stages, the group's previously held interests (including joint operations) in the acquired entity are remeasured to its acquisition-date fair value and the resulting gain or loss, if any, is recognised in profit or loss. Amounts arising from interests in the acquiree prior to the acquisition date that have previously been recognised in other comprehensive income are reclassified to profit or loss, where such treatment would be appropriate if that interest were disposed of.

If the initial accounting for a business combination is incomplete by the end of the reporting period in which the combination occurs, the group reports provisional amounts for the items for which the accounting is incomplete. Those provisional amounts are adjusted during the measurement period (see above), or additional assets or liabilities are recognised, to reflect new information obtained about facts and circumstances that existed as of the acquisition date that, if known, would have affected the amounts recognised as of that date.

Goodwill

Goodwill is initially recognised and measured as set out above.

Goodwill is not amortised but is reviewed for impairment at least annually. For the purpose of impairment testing, goodwill is allocated to each of the group's cash-generating units (or groups of cash-generating units) expected to benefit from the synergies of the combination. Cash-generating units to which goodwill has been allocated are tested for impairment annually, or more frequently when there is an indication that the unit may be impaired. If the recoverable amount of the cash-generating unit is less than the carrying amount of the unit, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro-rata on the basis of the carrying amount of each asset in the unit. An impairment loss recognised for goodwill is not reversed in a subsequent period.

On disposal of a cash-generating unit, the attributable amount of goodwill is included in the determination of the profit or loss on disposal.

The group's policy for goodwill arising on the acquisition of an associate is described below.

Investments in associates and joint ventures

An associate is an entity over which the group has significant influence and that is neither a subsidiary nor an interest in a joint venture. Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies.

A joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

The results and assets and liabilities of associates or joint ventures are incorporated in these financial statements using the equity method of accounting, except when the investment is classified as held for sale, in which case it is accounted for in accordance with IFRS 5.

Under the equity method, an investment in an associate or a joint venture is recognised initially in the consolidated statement of financial position at cost and adjusted thereafter to recognise the group's share of the profit or loss and other comprehensive income of the associate or joint venture. When the group's share of losses of an associate or a joint venture exceeds the group's interest in that associate or joint venture (which includes any long-term interests that, in substance, form part of the group's net investment in the associate or joint venture), the group discontinues recognising its share of further losses. Additional losses are recognised only to the extent that the group has incurred legal or constructive obligations or made payments on behalf of the associate or joint venture.

An investment in an associate or a joint venture is accounted for using the equity method from the date on which the investee becomes an associate or a joint venture. On acquisition of the investment in an associate or a joint venture, any excess of the cost of the investment over the group's share of the net fair value of the identifiable assets and liabilities of the investee is recognised as goodwill, which is included within the carrying amount of the investment. Any excess of the group's share of the net fair value of the identifiable assets and liabilities over the cost of the investment, after reassessment, is recognised immediately in profit or loss in the period in which the investment is acquired.

International GAAP Holdings Limited

If there is objective evidence that the group's net investment in an associate or joint venture is impaired, the requirements of IAS 36 Impairment of Assets are applied to determine whether it is necessary to recognise any impairment loss with respect to the group's investment. When necessary, the entire carrying amount of the investment (including goodwill) is tested for impairment in accordance with IAS 36 as a single asset by comparing its recoverable amount (higher of value in use and fair value less costs of disposal) with its carrying amount. Any impairment loss recognised is not allocated to any asset, including goodwill that forms part of the carrying amount of the investment. Any reversal of that impairment loss is recognised in accordance with IAS 36 to the extent that the recoverable amount of the investment subsequently increases.

The group discontinues the use of the equity method from the date when the investment ceases to be an associate or a joint venture. When the group retains an interest in the former associate or a joint venture and the retained interest is a financial asset, the group measures the retained interest at fair value at that date and the fair value is regarded as its fair value on initial recognition in accordance with IFRS 9. The difference between the carrying amount of the associate or a joint venture at the date the equity method was discontinued, and the fair value of any retained interest and any proceeds from disposing of a part interest in the associate or a joint venture is included in the determination of the gain or loss on disposal of the associate or joint venture. In addition, the group accounts for all amounts previously recognised in other comprehensive income in relation to that associate on the same basis as would be required if that associate had directly disposed of the related assets or liabilities. Therefore, if a gain or loss previously recognised in other comprehensive income by that associate or joint venture would be reclassified to profit or loss on the disposal of the related assets or liabilities, the group reclassifies the gain or loss from equity to profit or loss (as a reclassification adjustment) when the associate or joint venture is disposed of.

When the group reduces its ownership interest in an associate or a joint venture but the group continues to use the equity method, the group reclassifies to profit or loss the proportion of the gain or loss that had previously been recognised in other comprehensive income relating to that reduction in ownership interest if that gain or loss would be reclassified to profit or loss on the disposal of the related assets or liabilities.

When a group entity transacts with an associate or a joint venture of the group, profits and losses resulting from the transactions with the associate or joint venture are recognised in the group's consolidated financial statements only to the extent of interests in the associate or joint venture that are not related to the group.

The group applies IFRS 9, including the impairment requirements, to long-term interests in an associate or joint venture to which the equity method is not applied and which form part of the net investment in the investee. Furthermore, in applying IFRS 9 to long-term interests, the group does not take into account adjustments to their carrying amount required by IAS 28 *Investments in Associates and Joint Ventures* (i.e. adjustments to the carrying amount of long-term interests arising from the allocation of losses of the investee or assessment of impairment in accordance with IAS 28).

Interests in joint operations

A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

When the group undertakes its activities under joint operations, the group as a joint operator recognises in relation to its interest in a joint operation:

- its assets, including its share of any assets held jointly
- its liabilities, including its share of any liabilities incurred jointly
- its revenue from the sale of its share of the output arising from the joint operation
- its share of the revenue from the sale of the output by the joint operation
- its expenses, including its share of any expenses incurred jointly.

The group accounts for the assets, liabilities, revenue and expenses relating to its interest in a joint operation in accordance with the IFRS Accounting Standards applicable to the particular assets, liabilities, revenue and expenses.

When the group transacts with a joint operation in which it is a joint operator (such as a sale or contribution of assets), the group is considered to be conducting the transaction with the other parties to the joint operation, and gains and losses resulting from the transactions are recognised in the group's consolidated financial statements only to the extent of other parties' interests in the joint operation.

When the group transacts with a joint operation in which it is a joint operator (such as a purchase of assets), the group does not recognise its share of the gains and losses until it resells those assets to a third party.

International GAAP Holdings Limited

Non-current assets held for sale

Non-current assets (and disposal groups) classified as held for sale are measured at the lower of carrying amount and fair value less costs to sell.

Non-current assets and disposal groups are classified as held for sale if their carrying amount will be recovered through a sale transaction rather than through continuing use. This condition is regarded as met only when the sale is highly probable and the asset (or disposal group) is available for immediate sale in its present condition. Management must be committed to the sale which should be expected to qualify for recognition as a completed sale within one year from the date of classification.

When the group is committed to a sale plan involving loss of control of a subsidiary, all of the assets and liabilities of that subsidiary are classified as held for sale when the criteria described above are met, regardless of whether the group will retain a non-controlling interest in its former subsidiary after the sale.

When the group is committed to a sale plan involving disposal of an investment in an associate or, a portion of an investment in an associate, the investment, or the portion of the investment in the associate, that will be disposed of is classified as held for sale when the criteria described above are met. The group then ceases to apply the equity method in relation to the portion that is classified as held for sale. Any retained portion of an investment in an associate that has not been classified as held for sale continues to be accounted for using the equity method.

Revenue recognition

The group recognises revenue from the following major sources:

- sale of leisure goods and electronic equipment, including the related loyalty programme 'Maxi-Points Scheme', as disclosed in note 60, maintenance included in the price of products sold, as well as warranties granted under local legislation as disclosed in note 39
- installation of computer software for specialised business applications
- construction of residential properties.

IFRS 15:31 IFRS 15:46 IFRS 15:47

IFRS 15:119

Revenue is measured based on the consideration to which the group expects to be entitled in a contract with a customer and excludes amounts collected on behalf of third parties. The group recognises revenue when it transfers control of a product or service to a customer.

Sale of leisure goods

IFRS 15:119(e) IFRS 15:B30 The group sells sport shoes, sport equipment and outdoor play equipment both to the wholesale market and directly to customers through its own retail outlets. Sales-related warranties associated with leisure goods cannot be purchased separately and they serve as an assurance that the products sold comply with agreed-upon specifications. Accordingly, the group accounts for warranties in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* (see note 39).

IFRS 15:125

IFRS 15:108 IFRS 15:125 For sales of leisure goods to the wholesale market, revenue is recognised when control of the goods has transferred, being when the goods have been shipped to the wholesaler's specific location (delivery). Following delivery, the wholesaler has full discretion over the manner of distribution and price to sell the goods, has the primary responsibility when onselling the goods and bears the risks of obsolescence and loss in relation to the goods. A receivable is recognised by the group when the goods are delivered to the wholesaler as this represents the point in time at which the right to consideration becomes unconditional, as only the passage of time is required before payment is due.

IFRS 15:125

For sales of goods to retail customers, revenue is recognised when control of the goods has transferred, being at the point the customer purchases the goods at the retail outlet. Payment of the transaction price is due immediately at the point the customer purchases the goods.

IFRS 15:55 IFRS 15:119(d) IFRS 15:126(b) IFRS 15:126(d) IFRS 15:B21 Under the group's standard contract terms, customers have a right of return within 30 days. At the point of sale, a refund liability and a corresponding adjustment to revenue is recognised for those products expected to be returned. At the same time, the group has a right to recover the product when customers exercise their right of return so consequently recognises a right to returned goods asset and a corresponding adjustment to cost of sales. The group uses its accumulated historical experience to estimate the number of returns on a portfolio level using the expected value method. It is considered highly probable that a significant reversal in the cumulative revenue recognised will not occur given the consistent level of returns over previous years.

International GAAP Holdings Limited Source Sale of electronic equipment The group sells electronic equipment to the wholesale market and directly to customers both through its own retail outlets IFRS 15:55 IFRS 15:125 and through internet sales. IFRS 15:119(d) IFRS 15:B21 For sales of electronic equipment to the wholesale market and through retail outlets and internet sales, revenue is recognised by the group at a point in time in line with the policy outlined above for the sale of leisure goods. For sales to retail customers (from both retail outlet and internet sales) there exists the same 30-day right of return and accordingly a refund liability and a right to returned goods asset are recognised in relation to electronic equipment expected to be returned. For internet sales, revenue is recognised when control of the goods has transferred to the customer, being at the point the IFRS 15:106 goods are delivered to the customer. Delivery occurs when the goods have been shipped to the customer's specific location. IFRS 15:117 IFRS 15:125 When the customer initially purchases the goods online the transaction price received by the group is recognised as a contract liability until the goods have been delivered to the customer. 'Maxi-Points' customer loyalty programme The group operates a 'Maxi-Points' loyalty programme through which retail customers accumulate points on purchases of IFRS 15:B39 leisure goods and electronic equipment that entitle them to discounts on future purchases. These points provide a discount IFRS 15:B40 to customers that they would not receive without purchasing the leisure goods or electronic equipment (i.e. a material right). The promise to provide the discount to the customer is therefore a separate performance obligation. The transaction price is allocated between the product, the maintenance services (if the product is electronic equipment, IFRS 15:74 IFRS 15:106 as described below) and the points on a relative stand-alone selling price basis. The stand-alone selling price per point IFRS 15:117 is estimated based on the discount to be given when the points are redeemed by the customer and the likelihood of IFRS 15:B42 redemption, as evidenced by the group's historical experience. A contract liability is recognised for revenue relating to the loyalty points at the time of the initial sales transaction. Revenue from the loyalty points is recognised when the points are redeemed by the customer. Revenue for points that are not expected to be redeemed is recognised in proportion to the pattern of rights exercised by customers. Maintenance relating to electronic equipment Included in the transaction price for the sale of electronic equipment is an after-sales service. This service relates to IFRS 15:B41 maintenance work that may be required to be carried out on the equipment for a three-year period after sale. This period can then be extended if the customer requires additional years of maintenance services. The renewal of services after the three-year period will be for the price at which these are sold by the group to all of its customers as at the date of renewal regardless of the existence of a renewal option. Consequently, the option to extend the renewal period does not provide customers with any advantage when they enter into the initial contract and therefore no revenue has been deferred relating to this renewal option. The maintenance service is considered to be a distinct service as it is both regularly supplied by the group to other IFRS 15:27 customers on a stand-alone basis and is available for customers from other providers in the market. A portion of the IFRS 15:74 IFRS 15:81 transaction price is therefore allocated to the maintenance services based on the stand-alone selling price of those services. IFRS 15:126(c) Discounts are not considered as they are only given in rare circumstances and are never material. IFRS 15:B29 Revenue relating to the maintenance services is recognised over time. The transaction price allocated to these services is IFRS 15:35(a) IFRS 15:123(a) recognised as a contract liability at the time of the initial sales transaction and is released on a straight-line basis over the IFRS 15:124 period of service (i.e. three years when the services are purchased together with the underlying equipment). IFRS 15:106 IFRS 15:117 Installation of software services The group provides a service of installation of various software products for specialised business operations. Such services IFRS 15:35(b) are recognised as a performance obligation satisfied over time. Revenue is recognised for these installation services based IFRS 15:124 IFRS 15:107 on the stage of completion of the contract. The directors have assessed that the stage of completion determined as the IFRS 15:117 proportion of the total time expected to install that has elapsed at the end of the reporting period is an appropriate measure of progress towards complete satisfaction of these performance obligations under IFRS 15. Payment for installation of software services is not due from the customer until the installation services are complete and therefore a contract asset is recognised over the period in which the installation services are performed representing the entity's right to consideration

for the services performed to date.

International GAAP Holdings Limited

Construction of residential properties

IFRS 15:35(c) IFRS 15:124 The group constructs and sells residential properties under long-term contracts with customers. Such contracts are entered into before construction of the residential properties begins. Under the terms of the contracts, the group is contractually restricted from redirecting the properties to another customer and has an enforceable right to payment for work done. Revenue from construction of residential properties is therefore recognised over time on a cost-to-cost method, i.e. based on the proportion of contract costs incurred for work performed to date relative to the estimated total contract costs. The directors consider that this input method is an appropriate measure of the progress towards complete satisfaction of these performance obligations under IFRS 15.

IFRS 15:117 IFRS 15:106 IFRS 15:107 IFRS 15:126 The group becomes entitled to invoice customers for construction of residential properties based on achieving a series of performance-related milestones. When a particular milestone is reached the customer is sent a relevant statement of work signed by a third party assessor and an invoice for the related milestone payment. The group will previously have recognised a contract asset for any work performed. Any amount previously recognised as a contract asset is reclassified to trade receivables at the point at which it is invoiced to the customer. If the milestone payment exceeds the revenue recognised to date under the cost-to-cost method then the group recognises a contract liability for the difference. There is not considered to be a significant financing component in construction contracts with customers as the period between the recognition of revenue under the cost-to-cost method and the milestone payment is always less than one year.

Leases

IFRS 16:51

IFRS 16:5 IFRS 16:6 IFRS 16:9

IFRS 16:60

(a) The group as lessee

The group assesses whether a contract is, or contains, a lease, at inception of the contract. The group recognises a right-of-use asset and a corresponding lease liability with respect to all lease arrangements in which it is the lessee, except for short-term leases (defined as leases with a lease term of 12 months or less) and leases of low value assets (such as tablets and personal computers, small items of office furniture and telephones). For these leases, the group recognises the lease payments as an operating expense on a straight-line basis over the term of the lease unless another systematic basis is more representative of the time pattern in which economic benefits from the leased assets are consumed.

IFRS 16:26

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted by using the rate implicit in the lease. If this rate cannot be readily determined, the group uses its incremental borrowing rate.

The incremental borrowing rate depends on the term, currency and start date of the lease and is determined based on a series of inputs including: the risk-free rate based on government bond rates; a country-specific risk adjustment; a credit risk adjustment based on bond yields; and an entity-specific adjustment when the risk profile of the entity that enters into the lease is different to that of the group and the lease does not benefit from a guarantee from the group.

IFRS 16:27

Lease payments included in the measurement of the lease liability comprise :

- · fixed lease payments (including in-substance fixed payments), less any lease incentives receivable
- variable lease payments that depend on an index or rate, initially measured using the index or rate at the commencement date
- the amount expected to be payable by the lessee under residual value guarantees
- the exercise price of purchase options, if the lessee is reasonably certain to exercise the options
- payments of penalties for terminating the lease, if the lease term reflects the exercise of an option to terminate the lease.

IFRS 16:39

The lease liability is subsequently measured by increasing the carrying amount to reflect interest on the lease liability (using the effective interest method) and by reducing the carrying amount to reflect the lease payments made.

IFRS 16:40(a)

The group remeasures the lease liability (and makes a corresponding adjustment to the related right-of-use asset) whenever:

IFRS 16:40(a

• the lease term has changed or there is a significant event or change in circumstances resulting in a change in the assessment of exercise of a purchase option, in which case the lease liability is remeasured by discounting the revised lease payments using a revised discount rate

IFRS 16:42

• the lease payments change due to changes in an index or rate or a change in expected payment under a guaranteed residual value, in which cases the lease liability is remeasured by discounting the revised lease payments using an unchanged discount rate (unless the lease payments change is due to a change in a floating interest rate, in which case a revised discount rate is used)

IFRS 16:45(c)

• a lease contract is modified and the lease modification is not accounted for as a separate lease, in which case the lease liability is remeasured based on the lease term of the modified lease by discounting the revised lease payments using a revised discount rate at the effective date of the modification.

Source	International GAAP Holdings Limited
	The group did not make any such adjustments during the periods presented.
IFRS 16:24 IFRS 16:30	The right-of-use assets comprise the initial measurement of the corresponding lease liability, lease payments made at or before the commencement day, less any lease incentives received and any initial direct costs. They are subsequently measured at cost less accumulated depreciation and impairment losses.
	Whenever the group incurs an obligation for costs to dismantle and remove a leased asset, restore the site on which it is located or restore the underlying asset to the condition required by the terms and conditions of the lease, a provision is recognised and measured under IAS 37. To the extent that the costs relate to a right-of-use asset, the costs are included in the related right-of-use asset, unless those costs are incurred to produce inventories.
IFRS 16:32	Right-of-use assets are depreciated over the shorter period of lease term and useful life of the right-of-use asset. If a lease transfers ownership of the underlying asset or the cost of the right-of-use asset reflects that the group expects to exercise a purchase option, the related right-of-use asset is depreciated over the useful life of the underlying asset. The depreciation starts at the commencement date of the lease.
	The group applies IAS 36 to determine whether a right-of-use asset is impaired and accounts for any identified impairment loss as described in the 'Property, Plant and Equipment' policy.
IFRS 16:38	Variable rents that do not depend on an index or rate are not included in the measurement the lease liability and the right-of-use asset. The related payments are recognised as an expense in the period in which the event or condition that triggers those payments occurs and are included in the line "Other expenses" in profit or loss (see note 30).
IFRS 16:12 IFRS 16:15	As a practical expedient, IFRS 16 permits a lessee not to separate non-lease components, and instead account for any lease and associated non-lease components as a single arrangement. The group has not used this practical expedient. For contracts that contain a lease component and one or more additional lease or non-lease components, the group allocates the consideration in the contract to each lease component on the basis of the relative stand-alone price of the lease component and the aggregate stand-alone price of the non-lease components.
IFRS 16:89	(b) The group as lessor
IFRS 16:61 IFRS 16:62	The group enters into lease agreements as a lessor with respect to some of its investment properties. The group also rents equipment to retailers necessary for the presentation and customer fitting and testing of footwear and equipment manufactured by the group.
	Leases for which the group is a lessor are classified as finance or operating leases. Whenever the terms of the lease transfer substantially all the risks and rewards of ownership to the lessee, the contract is classified as a finance lease. All other leases are classified as operating leases.
IFRS 16:B58	When the group is an intermediate lessor, it accounts for the head lease and the sub-lease as two separate contracts. The sub-lease is classified as a finance or operating lease by reference to the right-of-use asset arising from the head lease.
IFRS 16:81 IFRS 16:83	Rental income from operating leases is recognised on a straight-line basis over the term of the relevant lease. Initial direct costs incurred in negotiating and arranging an operating lease are added to the carrying amount of the leased asset and recognised on a straight-line basis over the lease term.
IFRS 16:67 IFRS 16:75	Amounts due from lessees under finance leases are recognised as receivables at the amount of the group's net investment in the leases. Finance lease income is allocated to accounting periods so as to reflect a constant periodic rate of return on the group's net investment outstanding in respect of the leases.
	Subsequent to initial recognition, the group regularly reviews the estimated unguaranteed residual value and applies the impairment requirements of IFRS 9, recognising an allowance for expected credit losses on the finance lease receivables.
	Finance lease income is calculated with reference to the gross carrying amount of the lease receivables, except for credit-impaired financial assets for which interest income is calculated with reference to their amortised cost (i.e. after a deduction of the loss allowance).
IFRS 16:17	When a contract includes both lease and non-lease components, the group applies IFRS 15 to allocate the consideration under the contract to each component.
	Foreign currencies
40	In preparing the financial statements of the group entities, transactions in currencies other than the entity's functional currency (foreign currencies) are recognised at the rates of exchange prevailing on the dates of the transactions. At each reporting date, monetary assets and liabilities that are denominated in foreign currencies are retranslated at the rates prevailing at that date. Non-monetary items carried at fair value that are denominated in foreign currencies are translated at the rates prevailing at the date when the fair value was determined. Non-monetary items that are measured in terms of

at the rates prevailing at the date when the fair value was determined. Non-monetary items that are measured in terms of

historical cost in a foreign currency are not retranslated.

International GAAP Holdings Limited

Exchange differences are recognised in profit or loss in the period in which they arise except for:

- exchange differences on foreign currency borrowings relating to assets under construction for future productive use,
 which are included in the cost of those assets when they are regarded as an adjustment to interest costs on those foreign currency borrowings
- exchange differences on transactions entered into to hedge certain foreign currency risks (see below under financial instruments/hedge accounting)
- exchange differences on monetary items receivable from or payable to a foreign operation for which settlement is neither planned nor likely to occur in the foreseeable future (therefore forming part of the net investment in the foreign operation), which are recognised initially in other comprehensive income and reclassified from equity to profit or loss on disposal or partial disposal of the net investment.

For the purpose of presenting consolidated financial statements, the assets and liabilities of the group's foreign operations are translated at exchange rates prevailing on the reporting date. Income and expense items are translated at the average exchange rates for the period, unless exchange rates fluctuate significantly during that period, in which case the exchange rates at the date of transactions are used. Exchange differences arising, if any, are recognised in other comprehensive income and accumulated in a foreign exchange translation reserve (attributed to non-controlling interests as appropriate).

On the disposal of a foreign operation (i.e. a disposal of the group's entire interest in a foreign operation, or a disposal involving loss of control over a subsidiary that includes a foreign operation or a partial disposal of an interest in a joint arrangement or an associate that includes a foreign operation of which the retained interest becomes a financial asset), all of the exchange differences accumulated in a foreign exchange translation reserve in respect of that operation attributable to the owners of the parent company are reclassified to profit or loss.

In addition, in relation to a partial disposal of a subsidiary that includes a foreign operation that does not result in the group losing control over the subsidiary, the proportionate share of accumulated exchange differences are re-attributed to non-controlling interests and are not recognised in profit or loss. For all other partial disposals (i.e. partial disposals of associates or joint arrangements that do not result in the group losing significant influence or joint control), the proportionate share of the accumulated exchange differences is reclassified to profit or loss.

Goodwill and fair value adjustments arising on the acquisition of a foreign entity are treated as assets and liabilities of the foreign entity and translated at the closing rate. Exchange differences arising are recognised in other comprehensive income.

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, which are assets that necessarily take a substantial period of time to get ready for their intended use or sale, are added to the cost of those assets, until such time as the assets are substantially ready for their intended use or sale.

To the extent that variable rate borrowings are used to finance a qualifying asset and are hedged in an effective cash flow hedge of interest rate risk, the effective portion of the derivative is recognised in other comprehensive income and reclassified to profit or loss when the qualifying asset affects profit or loss. To the extent that fixed rate borrowings are used to finance a qualifying asset and are hedged in an effective fair value hedge of interest rate risk, the capitalised borrowing costs reflect the hedged interest rate.

Investment income earned on the temporary investment of specific borrowings pending their expenditure on qualifying assets is deducted from the borrowing costs eligible for capitalisation.

All other borrowing costs are recognised in profit or loss in the period in which they are incurred.

IAS 20:39(a)

Government grants

Government grants are not recognised until there is reasonable assurance that the group will comply with the conditions attaching to them and that the grants will be received.

Government grants are recognised in profit or loss on a systematic basis over the periods in which the group recognises as expenses the related costs for which the grants are intended to compensate. Specifically, government grants whose primary condition is that the group should purchase, construct or otherwise acquire non-current assets (including property, plant and equipment) are recognised as deferred income in the consolidated statement of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

Government grants that are receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the group with no future related costs are recognised in profit or loss in the period in which they become receivable.

International GAAP Holdings Limited

The benefit of a government loan at a below-market rate of interest is treated as a government grant, measured as the difference between proceeds received and the fair value of the loan based on prevailing market interest rates.

Retirement and termination benefit costs

Payments to defined contribution retirement benefit plans are recognised as an expense when employees have rendered service entitling them to the contributions. Payments made to state-managed retirement benefit plans are accounted for as payments to defined contribution plans where the group's obligations under the plans are equivalent to those arising in a defined contribution retirement benefit plan.

For defined benefit retirement plans, the cost of providing benefits is determined using the projected unit credit method, with actuarial valuations being carried out at the end of each annual reporting period. Remeasurements comprising actuarial gains and losses, the effect of the asset ceiling (if applicable) and the return on plan assets (excluding interest) are recognised immediately in the statement of financial position with a charge or credit to other comprehensive income in the period in which they occur. Remeasurements recognised in other comprehensive income are not reclassified. Past service cost is recognised in profit or loss when the plan amendment or curtailment occurs, or when the group recognises related restructuring costs or termination benefits, if earlier. Gains or losses on settlement of a defined benefit plan are recognised when the settlement occurs. Net interest is calculated by applying a discount rate to the net defined benefit liability or asset. Defined benefit costs are split into three categories:

- service costs, which includes current service cost, past service cost and gains and losses on curtailments and settlements
- net interest expense or income
- remeasurements.

The group recognises service costs within profit or loss as cost of sales and administrative expenses (see note 58).

Net interest expense or income is recognised within finance costs (see note 11).

The retirement benefit obligation recognised in the consolidated statement of financial position represents the deficit or surplus in the group's defined benefit plans. Any surplus resulting from this calculation is limited to the present value of any economic benefits available in the form of refunds from the plans or reductions in future contributions to the plans. [If applicable include alternative explanation about rights to refunds: The Trust Deed provides International GAAP Holdings Limited with an unconditional right to a refund of surplus assets assuming the full settlement of plan liabilities in the event of a plan wind-up. Furthermore, in the ordinary course of business the Trustee has no rights to unilaterally wind up, or otherwise augment the benefits due to members of, the plan. Based on these rights, any net surplus in the plan is recognised in full.]

A liability for a termination benefit is recognised at the earlier of when the entity can no longer withdraw the offer of the termination benefit and when the entity recognises any related restructuring costs.

Discretionary contributions made by employees or third parties reduce service cost upon payment of these contributions to the plan.

When the formal terms of the plans specify that there will be contributions from employees or third parties, the accounting treatment depends on whether the contributions are linked to service, as follows:

- if the contributions are not linked to services (e.g. contributions are required to reduce a deficit arising from losses on plan assets or from actuarial losses), they are reflected in the remeasurement of the net defined benefit liability (asset)
- if contributions are linked to services, they reduce service costs. For the amount of contribution that is dependent on the number of years of service, the entity reduces service cost by attributing the contributions to periods of service using the attribution method required by IAS 19:70 for the gross benefits. For the amount of contribution that is independent of the number of years of service, the entity [reduces service cost in the period in which the related service is rendered/reduces service cost by attributing contributions to the employees' periods of service in accordance with IAS 19:70].

International GAAP Holdings Limited

Short-term and other long-term employee benefits

A liability is recognised for benefits accruing to employees in respect of wages and salaries, annual leave and sick leave in the period the related service is rendered at the undiscounted amount of the benefits expected to be paid in exchange for that service.

Liabilities recognised in respect of short-term employee benefits are measured at the undiscounted amount of the benefits expected to be paid in exchange for the related service.

Liabilities recognised in respect of other long-term employee benefits are measured at the present value of the estimated future cash outflows expected to be made by the group in respect of services provided by employees up to the reporting date.

Taxation

The income tax expense represents the sum of current and deferred income tax expense.

Current tax

The tax currently payable is based on taxable profit for the year. Taxable profit differs from net profit as reported in profit or loss because it excludes items of income or expense that are taxable or deductible in other years and it further excludes items that are never taxable or deductible. The group's liability for current tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period.

A provision is recognised for those matters for which the tax determination is uncertain but it is considered probable that there will be a future outflow of funds to a tax authority. The provisions are measured at the best estimate of the amount expected to become payable. The assessment is based on the judgement of tax professionals within the group supported by previous experience in respect of such activities and in certain cases based on specialist independent tax advice.

Deferred tax

Deferred tax is the tax expected to be payable or recoverable on differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit, and is accounted for using the liability method. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that taxable profits will be available against which deductible temporary differences can be utilised. Such assets and liabilities are not recognised if the temporary difference arises from the initial recognition (other than in a business combination or for transactions that give rise to equal taxable and deductible temporary differences) of other assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit. In addition, a deferred tax liability is not recognised if the temporary difference arises from the initial recognition of goodwill.

Deferred tax liabilities are recognised for taxable temporary differences arising on investments in subsidiaries and associates, and interests in joint ventures, except where the group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future. Deferred tax assets arising from deductible temporary differences associated with such investments and interests are only recognised to the extent that it is probable that there will be sufficient taxable profits against which to utilise the benefits of the temporary differences and they are expected to reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered.

Deferred tax is calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realised based on tax laws and rates that have been enacted or substantively enacted at the reporting date.

The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the group expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

International GAAP Holdings Limited

For the purposes of measuring deferred tax liabilities and deferred tax assets for investment properties that are measured using the fair value model, the carrying amounts of such properties are presumed to be recovered entirely through sale, unless the presumption is rebutted. The presumption is rebutted when the investment property is depreciable and is held within a business model whose objective is to consume substantially all of the economic benefits embodied in the investment property over time, rather than through sale. The directors reviewed the group's investment property portfolios and concluded that none of the group's investment properties are held under a business model whose objective is to consume substantially all of the economic benefits embodied in the investment properties over time, rather than through sale. Therefore, the directors have determined that the 'sale' presumption set out in the amendments to IAS 12 is not rebutted. As a result, the group has not recognised any deferred taxes on changes in fair value of the investment properties as the group is not subject to any income taxes on the fair value changes of the investment properties on disposal.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the group intends to settle its current tax assets and liabilities on a net basis.

Current tax and deferred tax for the year

Current and deferred tax are recognised in profit or loss, except when they relate to items that are recognised in other comprehensive income or directly in equity, in which case the current and deferred tax are also recognised in other comprehensive income or directly in equity respectively. Where current tax or deferred tax arises from the initial accounting for a business combination, the tax effect is included in the accounting for the business combination.

IAS 16:73(a)-(c) Property, plant and equipment

Land and buildings held for use in the production or supply of goods or services for rental to others (excluding investment properties), or for administrative purposes, are measured in the statement of financial position at their revalued amounts, being the fair value at the date of revaluation, less any accumulated depreciation and accumulated impairment losses. Revaluations are performed with sufficient regularity such that the carrying amount does not differ materially from that which would be determined using fair values at the reporting date.

Any revaluation increase arising on the revaluation of such land and buildings is credited to the properties revaluation reserve, except to the extent that it reverses a revaluation decrease for the same asset previously recognised as an expense, in which case the increase is credited to profit or loss to the extent of the decrease previously expensed. A decrease in carrying amount arising on the revaluation of such land and buildings is charged as an expense to the extent that it exceeds the balance, if any, held in the properties revaluation reserve relating to a previous revaluation of that asset.

Depreciation on revalued buildings is recognised in profit or loss. On the subsequent sale or retirement of a revalued property, the attributable revaluation surplus remaining in the properties revaluation reserve is transferred directly to retained earnings.

Properties in the course of construction for production, supply or administrative purposes, or for purposes not yet determined, are carried at cost, less any recognised impairment loss. Cost includes professional fees and, for qualifying assets, borrowing costs capitalised in accordance with the group's accounting policy. Depreciation of these assets, determined on the same basis as other property assets, commences when the assets are ready for their intended use.

Freehold land is not depreciated.

Plant, machinery, fixtures and fittings are stated at cost less accumulated depreciation and accumulated impairment loss.

Depreciation is recognised so as to write off the cost or valuation of assets (other than freehold land and properties under construction) less their residual values over their useful lives, using the straight-line method, on the following bases:

Buildings 4 per cent per annum

Plant and machinery 10 per cent - 25 per cent per annum Fixtures and fittings 10 per cent - 30 per cent per annum

International GAAP Holdings Limited

The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis.

Right-of-use assets are depreciated over the shorter period of the lease term and the useful life of the underlying asset. If a lease transfers ownership of the underlying asset or the cost of the right-of-use asset reflects that the group expects to exercise a purchase option, the related right-of-use asset is depreciated over the useful life of the underlying asset.

An item of property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. The gain or loss arising on the disposal or retirement of an asset is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in profit or loss.

Commentary:

Provide additional explanation if the group has elected to use fair value or a previous revaluation as deemed cost on transition to IFRS Accounting Standards.

IAS 40:75(a)

Investment property

Investment property, which is property held to earn rentals and/or for capital appreciation (including property under construction for such purposes), is measured initially at cost, including transaction costs. Subsequent to initial recognition, investment property is measured at fair value. Gains or losses arising from changes in the fair value of investment property are included in profit or loss in the period in which they arise.

An investment property is derecognised upon disposal or when the investment property is permanently withdrawn from use and no future economic benefits are expected from the disposal. Any gain or loss arising on derecognition of the property (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is included in profit or loss in the period in which the property is derecognised.

Commentary:

A group that elects to use the cost model for investment property (not illustrated in these illustrative financial statements) should disclose an appropriate policy and make reference, if relevant, to the use of the elections to use fair value or previous revaluations as deemed cost on transition.

IAS 38:118(a)

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at cost less accumulated amortisation and accumulated impairment losses. Amortisation is recognised on a straight-line basis over their estimated useful lives which are disclosed in note 17. The estimated useful life and amortisation method are reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis. Intangible assets with indefinite useful lives that are acquired separately are carried at cost less accumulated impairment losses.

Internally-generated intangible assets - research and development expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

An internally-generated intangible asset arising from development (or from the development phase of an internal project) is recognised if, and only if, all of the following conditions have been demonstrated:

- the technical feasibility of completing the intangible asset so that it will be available for use or sale
- the intention to complete the intangible asset and use or sell it
- the ability to use or sell the intangible asset
- how the intangible asset will generate probable future economic benefits
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset
- the ability to measure reliably the expenditure attributable to the intangible asset during its development.

The amount initially recognised for internally-generated intangible assets is the sum of the expenditure incurred from the date when the intangible asset first meets the recognition criteria listed above. Where no internally-generated intangible asset can be recognised, development expenditure is recognised in profit or loss in the period in which it is incurred.

Subsequent to initial recognition, internally-generated intangible assets are reported at cost less accumulated amortisation and accumulated impairment losses, on the same basis as intangible assets that are acquired separately.

International GAAP Holdings Limited

Intangible assets acquired in a business combination

Intangible assets acquired in a business combination and recognised separately from goodwill are recognised initially at their fair value at the acquisition date (which is regarded as their cost).

IAS 38:118(b)

Subsequent to initial recognition, intangible assets acquired in a business combination are reported at cost less accumulated amortisation and accumulated impairment losses, on the same basis as intangible assets that are acquired separately.

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an intangible asset, measured as the difference between the net disposal proceeds and the carrying amount of the asset, are recognised in profit or loss when the asset is derecognised.

Patents and trademarks

Patents and trademarks are measured initially at purchase cost and are amortised on a straight-line basis over their estimated useful lives.

Impairment of property, plant and equipment and intangible assets excluding goodwill

At each reporting date, the group reviews the carrying amounts of its property, plant and equipment and intangible assets to determine whether there is any indication that those assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the asset is estimated to determine the extent of the impairment loss (if any). Where the asset does not generate cash flows that are independent from other assets, the group estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Intangible assets with an indefinite useful life are tested for impairment at least annually and whenever there is an indication at the end of a reporting period that the asset may be impaired.

Recoverable amount is the higher of fair value less costs of disposal and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or cash-generating unit) is reduced to its recoverable amount. An impairment loss is recognised immediately in profit or loss, unless the relevant asset is carried at a revalued amount, in which case the impairment loss is treated as a revaluation decrease and to the extent that the impairment loss is greater than the related revaluation surplus, the excess impairment loss is recognised in profit or loss.

Where an impairment loss subsequently reverses, the carrying amount of the asset (or cash-generating unit) is increased to the revised estimate of its recoverable amount, but so that the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognised for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognised immediately in profit or loss to the extent that it eliminates the impairment loss which has been recognised for the asset in prior years. Any increase in excess of this amount is treated as a revaluation increase.

IAS 2:36(a)

Inventories

Inventories are stated at the lower of cost and net realisable value. Cost comprises direct materials and, where applicable, direct labour costs and those overheads that have been incurred in bringing the inventories to their present location and condition. Cost is calculated using the weighted average cost method. Net realisable value represents the estimated selling price less all estimated costs of completion and [list the estimated costs necessary to make the sale, for example, costs to be incurred in marketing, selling and distribution].

Cash and cash equivalents

In the statement of financial position, cash and cash equivalents are comprised of cash (i.e. cash on hand and on-demand deposits) and cash equivalents. Cash equivalents are short-term (generally with original maturity of three months or less), highly liquid investments that are readily convertible to a known amount of cash and which are subject to an insignificant risk of changes in value. Cash equivalents are held for the purpose of meeting short-term cash commitments rather for investment or other purposes.

Bank balances for which use by the group is subject to third party contractual restrictions are included as part of cash unless the restrictions result in a bank balance no longer meeting the definition of cash. Contractual restrictions affecting use of bank balances are disclosed in note 54. If the contractual restrictions to use the cash extend beyond 12 months after the end of the reporting period, the related amounts are classified as non-current in the statement of financial position.

For the purposes of the statement of cash flows, cash and cash equivalents consist of cash and cash equivalents as defined above, net of outstanding bank overdrafts which are repayable on demand and form an integral part of the group's cash management. Such overdrafts are presented as short-term borrowings in the statement of financial position.

IFRS 7:21 Financial instruments

Financial assets and financial liabilities are recognised in the group's statement of financial position when the group becomes a party to the contractual provisions of the instrument.

Financial assets and financial liabilities are initially measured at fair value, except for trade receivables that do not have a significant financing component which are measured at transaction price. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets and financial liabilities at fair value through profit or loss) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognised immediately in profit or loss.

Financial assets

IFRS 7:B5(c)

All regular way purchases or sales of financial assets are recognised and derecognised on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the marketplace.

All recognised financial assets are measured subsequently in their entirety at either amortised cost or fair value, depending on the classification of the financial assets.

Classification of financial assets

Debt instruments that meet the following conditions are measured subsequently at amortised cost:

- the financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Debt instruments that meet the following conditions are measured subsequently at fair value through other comprehensive income (FVTOCI):

- the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling the financial assets
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

By default, all other financial assets are measured subsequently at fair value through profit or loss (FVTPL).

Despite the foregoing, the group may make the following irrevocable election / designation at initial recognition of a financial asset:

- the group may irrevocably elect to present subsequent changes in fair value of an equity investment in other comprehensive income if certain criteria are met (see (iii) below)
- the group may irrevocably designate a debt investment that meets the amortised cost or FVTOCI criteria as measured at FVTPL if doing so eliminates or significantly reduces an accounting mismatch (see (iv) below).

(i) Amortised cost and effective interest method

The effective interest method is a method of calculating the amortised cost of a debt instrument and of allocating interest income over the relevant period.

International GAAP Holdings Limited

For financial assets other than purchased or originated credit-impaired financial assets (i.e. assets that are credit-impaired on initial recognition), the effective interest rate is the rate that exactly discounts estimated future cash flows (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) excluding expected credit losses, through the expected life of the debt instrument, or, where appropriate, a shorter period, to the gross carrying amount of the debt instrument on initial recognition. For purchased or originated credit-impaired financial assets, a credit-adjusted effective interest rate is calculated by discounting the estimated future cash flows, including expected credit losses, to the amortised cost of the debt instrument on initial recognition.

The amortised cost of a financial asset is the amount at which the financial asset is measured at initial recognition minus the principal repayments, plus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, adjusted for any loss allowance. The gross carrying amount of a financial asset is the amortised cost of a financial asset before adjusting for any loss allowance.

IFRS 7:B5(e)

Interest income is recognised using the effective interest method for debt instruments measured subsequently at amortised cost and at FVTOCI. For financial assets other than purchased or originated credit-impaired financial assets, interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired (see below). For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset. If, in subsequent reporting periods, the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset.

For purchased or originated credit-impaired financial assets, the group recognises interest income by applying the credit-adjusted effective interest rate to the amortised cost of the financial asset from initial recognition. The calculation does not revert to the gross basis even if the credit risk of the financial asset subsequently improves so that the financial asset is no longer credit-impaired. Interest income is recognised in profit or loss and is included in the "finance income - interest income" line item (note 9).

(ii) Debt instruments classified as at FVTOCI

The corporate bonds held by the group are classified as at FVTOCI. Fair value is determined in the manner described in note 62(a)(i). The corporate bonds are initially measured at fair value plus transaction costs. Subsequently, changes in the carrying amount of these corporate bonds as a result of foreign exchange gains and losses (see below), impairment gains or losses (see below), and interest income calculated using the effective interest method (see (i) above) are recognised in profit or loss. The amounts that are recognised in profit or loss are the same as the amounts that would have been recognised in profit or loss if these corporate bonds had been measured at amortised cost. All other changes in the carrying amount of these corporate bonds are recognised in other comprehensive income and accumulated under the heading of investments revaluation reserve. When these corporate bonds are derecognised, the cumulative gains or losses previously recognised in other comprehensive income are reclassified to profit or loss.

(iii) Equity instruments designated as at FVTOCI

On initial recognition, the group may make an irrevocable election (on an instrument-by-instrument basis) to designate investments in equity instruments as at FVTOCI. Designation at FVTOCI is not permitted if the equity investment is held for trading or if it is contingent consideration recognised by an acquirer in a business combination.

Investments in equity instruments at FVTOCI are initially measured at fair value plus transaction costs. Subsequently, they are measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in the investments revaluation reserve. The cumulative gain or loss is not reclassified to profit or loss on disposal of the equity investments, instead, it is transferred to retained earnings.

Dividends on these investments in equity instruments are recognised in profit or loss in accordance with IFRS 9, unless the dividends clearly represent a recovery of part of the cost of the investment. Dividends are included in the 'Finance income - Other' line item (note 9) in profit or loss. The group designated all investments in equity instruments that are not held for trading as at FVTOCI on initial recognition (see note 24).

A financial asset is held for trading if either:

- it has been acquired principally for the purpose of selling it in the near term
- on initial recognition it is part of a portfolio of identified financial instruments that the group manages together and has evidence of a recent actual pattern of short-term profit-taking
- it is a derivative (except for a derivative that is a financial guarantee contract or a designated and effective hedging instrument).

(iv) Financial assets at FVTPL

Financial assets that do not meet the criteria for being measured at amortised cost or FVTOCI (see (i) to (iii) above) are measured at FVTPL. Specifically:

- investments in equity instruments are classified as at FVTPL, unless the group designates an equity investment that is neither held for trading nor a contingent consideration arising from a business combination as at FVTOCI on initial recognition (see (iii) above)
- debt instruments that do not meet the amortised cost criteria or the FVTOCI criteria (see (i) and (ii) above) are classified
 as at FVTPL. In addition, debt instruments that meet either the amortised cost criteria or the FVTOCI criteria may be
 designated as at FVTPL upon initial recognition if such designation eliminates or significantly reduces a measurement
 or recognition inconsistency (so called 'accounting mismatch') that would arise from measuring assets or liabilities or
 recognising the gains and losses on them on different bases. The group has not designated any debt instruments as
 at FVTPL.

IFRS 7:B5(e)

Financial assets at FVTPL are measured at fair value at the end of each reporting period, with any fair value gains or losses recognised in profit or loss to the extent they are not part of a designated hedging relationship (see hedge accounting policy). The net gain or loss recognised in profit or loss includes any dividend or interest earned on the financial asset and is included in the 'other gains and losses' line item (note 10). Fair value is determined in the manner described in note 62(a)(i).

Foreign exchange gains and losses

The carrying amount of financial assets that are denominated in a foreign currency is determined in that foreign currency and translated at the spot rate at the end of each reporting period. Specifically:

- for financial assets measured at amortised cost that are not part of a designated hedging relationship, exchange differences are recognised in profit or loss in the 'other gains and losses' line item (note 10)
- for debt instruments measured at FVTOCI that are not part of a designated hedging relationship, exchange differences on the amortised cost of the debt instrument are recognised in profit or loss in the 'other gains and losses' line item (note 10). As the foreign currency element recognised in profit or loss is the same as if it was measured at amortised cost, the residual foreign currency element based on the translation of the carrying amount (at fair value) is recognised in other comprehensive income in the investments revaluation reserve
- for financial assets measured at FVTPL that are not part of a designated hedging relationship, exchange differences are recognised in profit or loss in the 'other gains and losses' line item as part of the fair value gain or loss (note 10)
- for equity instruments measured at FVTOCI, exchange differences are recognised in other comprehensive income in the investments revaluation reserve.

See hedge accounting policy regarding the recognition of exchange differences where the foreign currency risk component of a financial asset is designated as a hedging instrument for a hedge of foreign currency risk.

IFRS 7:35F

Impairment of financial assets

The group recognises a loss allowance for expected credit losses on investments in debt instruments that are measured at amortised cost or at FVTOCI, lease receivables, trade receivables and contract assets, as well as on financial guarantee contracts. The amount of expected credit losses is updated at each reporting date to reflect changes in credit risk since initial recognition of the respective financial instrument.

The group always recognises lifetime expected credit losses (ECL) for trade receivables, contract assets and lease receivables. The expected credit losses on these financial assets are estimated using a provision matrix based on the group's historical credit loss experience, adjusted for factors that are specific to the debtors, general economic conditions and an assessment of both the current as well as the forecast direction of conditions at the reporting date, including time value of money where appropriate.

For all other financial instruments, the group recognises lifetime ECL when there has been a significant increase in credit risk since initial recognition. However, if the credit risk on the financial instrument has not increased significantly since initial recognition, the group measures the loss allowance for that financial instrument at an amount equal to 12-month ECL.

Lifetime ECL represents the expected credit losses that will result from all possible default events over the expected life of a financial instrument. In contrast, 12-month ECL represents the portion of lifetime ECL that is expected to result from default events on a financial instrument that are possible within 12 months after the reporting date.

IFRS 7:35F(a)

(i) Significant increase in credit risk

IFRS 7:35G(b)

In assessing whether the credit risk on a financial instrument has increased significantly since initial recognition, the group compares the risk of a default occurring on the financial instrument at the reporting date with the risk of a default occurring on the financial instrument at the date of initial recognition. In making this assessment, the group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort. Forward-looking information considered includes the future prospects of the industries in which the group's debtors operate, obtained from economic expert reports, financial analysts, governmental bodies, relevant think-tanks and other similar organisations, as well as consideration of various external sources of actual and forecast economic information that relate to the group's core operations.

IFRS 7:35F(a)
IFRS 7:35G(a)
(ii)

In particular, the following information is taken into account when assessing whether credit risk has increased significantly since initial recognition:

- an actual or expected significant deterioration in the financial instrument's external (if available) or internal credit rating
- significant deterioration in external market indicators of credit risk for a particular financial instrument, e.g. a significant increase in the credit spread, the credit default swap prices for the debtor, or the length of time or the extent to which the fair value of a financial asset has been less than its amortised cost
- existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant decrease in the debtor's ability to meet its debt obligations
- an actual or expected significant deterioration in the operating results of the debtor
- significant increases in credit risk on other financial instruments of the same debtor
- an actual or expected significant adverse change in the regulatory, economic, or technological environment of the debtor that results in a significant decrease in the debtor's ability to meet its debt obligations.

Irrespective of the outcome of the above assessment, the group presumes that the credit risk on a financial asset has increased significantly since initial recognition when contractual payments are more than 30 days past due, unless the group has reasonable and supportable information that demonstrates otherwise.

Despite the foregoing, the group assumes that the credit risk on a financial instrument has not increased significantly since initial recognition if the financial instrument is determined to have low credit risk at the reporting date. A financial instrument is determined to have low credit risk if:

- the financial instrument has a low risk of default
- the debtor has a strong capacity to meet its contractual cash flow obligations in the near term
- adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

IFRS 7:35F(a)(i)

The group considers a financial asset to have low credit risk when the asset has external credit rating of 'investment grade' in accordance with the globally understood definition or if an external rating is not available, the asset has an internal rating of 'performing'. Performing means that the counterparty has a strong financial position and there are no past due amounts.

For financial guarantee contracts, the date that the group becomes a party to the irrevocable commitment is considered to be the date of initial recognition for the purposes of assessing the financial instrument for impairment. In assessing whether there has been a significant increase in the credit risk since initial recognition of a financial guarantee contract, the group considers the changes in the risk that the specified debtor will default on the contract.

The group regularly monitors the effectiveness of the criteria used to identify whether there has been a significant increase in credit risk and revises them as appropriate to ensure that the criteria are capable of identifying significant increase in credit risk before the amount becomes past due.

IFRS 7:35F(b)

(ii) Definition of default

The group considers the following as constituting an event of default for internal credit risk management purposes as historical experience indicates that financial assets that meet either of the following criteria are generally not recoverable:

when there is a breach of financial covenants by the debtor

International GAAP Holdings Limited

• information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the group, in full (without taking into account any collateral held by the group).

Irrespective of the above analysis, the group considers that default has occurred when a financial asset is more than 90 days past due unless the group has reasonable and supportable information to demonstrate that a more lagging default criterion is more appropriate.

IFRS 7:35F(d)
IFRS 7:35G(a)
(iii)

(iii) Credit-impaired financial assets

A financial asset is credit-impaired when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired includes observable data about the following events:

- significant financial difficulty of the issuer or the borrower
- a breach of contract, such as a default or past due event (see (ii) above)
- the lender(s) of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider
- it is becoming probable that the borrower will enter bankruptcy or other financial reorganisation
- the disappearance of an active market for that financial asset because of financial difficulties.

IFRS 7:35F(e)

(iv) Write-off policy

The group writes off a financial asset when there is information indicating that the debtor is in severe financial difficulty and there is no realistic prospect of recovery, e.g. when the debtor has been placed under liquidation or has entered into bankruptcy proceedings, or in the case of trade receivables, when the amounts are over two years past due, whichever occurs sooner. Financial assets written off may still be subject to enforcement activities under the group's recovery procedures, taking into account legal advice where appropriate. Any recoveries made are recognised in profit or loss.

IFRS 7:35G(a)

(v) Measurement and recognition of expected credit losses

The measurement of expected credit losses is a function of the probability of default, loss given default (i.e. the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on historical data adjusted by forward-looking information as described above. As for the exposure at default, for financial assets, this is represented by the assets' gross carrying amount at the reporting date; for financial guarantee contracts, the exposure includes the amount of guaranteed debt that has been drawn down as at the reporting date, together with any additional guaranteed amounts expected to be drawn down by the borrower in the future by default date determined based on historical trend, the group's understanding of the specific future financing needs of the debtors, and other relevant forward-looking information.

For financial assets, the expected credit loss is estimated as the difference between all contractual cash flows that are due to the group in accordance with the contract and all the cash flows that the group expects to receive, discounted at the original effective interest rate. For a lease receivable, the cash flows used for determining the expected credit losses is consistent with the cash flows used in measuring the lease receivable in accordance with IFRS 16.

For a financial guarantee contract, as the group is required to make payments only in the event of a default by the debtor in accordance with the terms of the instrument that is guaranteed, the expected loss allowance is the expected payments to reimburse the holder for a credit loss that it incurs less any amounts that the group expects to receive from the holder, the debtor or any other party.

If the group has measured the loss allowance for a financial instrument at an amount equal to lifetime ECL in the previous reporting period, but determines at the current reporting date that the conditions for lifetime ECL are no longer met, the group measures the loss allowance at an amount equal to 12-month ECL at the current reporting date, except for assets for which the simplified approach was used.

The group recognises an impairment gain or loss in profit or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account, except for investments in debt instruments that are measured at FVTOCI, for which the loss allowance is recognised in other comprehensive income and accumulated in the investment revaluation reserve, and does not reduce the carrying amount of the financial asset in the statement of financial position.

International GAAP Holdings Limited

Derecognition of financial assets

The group derecognises a financial asset only when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the group neither transfers nor retains substantially all the risks and rewards of ownership and continues to control the transferred asset, the group recognises its retained interest in the asset and an associated liability for amounts it may have to pay. If the group retains substantially all the risks and rewards of ownership of a transferred financial asset, the group continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received.

On derecognition of a financial asset measured at amortised cost, the difference between the asset's carrying amount and the sum of the consideration received and receivable is recognised in profit or loss. In addition, on derecognition of an investment in a debt instrument classified as at FVTOCI, the cumulative gain or loss previously accumulated in the investments revaluation reserve is reclassified to profit or loss. In contrast, on derecognition of an investment in an equity instrument which the group has elected on initial recognition to measure at FVTOCI, the cumulative gain or loss previously accumulated in the investments revaluation reserve is not reclassified to profit or loss, but is transferred to retained earnings.

Financial liabilities and equity

Classification as debt or equity

Debt and equity instruments are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the group are recognised at the proceeds received, net of direct issue costs.

The repurchase of equity instruments issued by the group is recognised and deducted directly in equity. No gain or loss is recognised in profit or loss on the purchase, sale, issue or cancellation of equity instruments issued by the group.

Compound instruments

The component parts of convertible loan notes issued by the group are classified separately as financial liabilities and equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument. A conversion option that will be settled by the exchange of a fixed amount of cash or another financial asset for a fixed number of equity instruments issued by the group is an equity instrument.

At the date of issue, the fair value of the liability component is estimated using the prevailing market interest rate for a similar non-convertible instrument. This amount is recognised as a liability on an amortised cost basis using the effective interest method until extinguished upon conversion or at the instrument's maturity date.

The conversion option classified as equity is determined by deducting the amount of the liability component from the fair value of the compound instrument as a whole. This is recognised and included in equity, net of income tax effects, and is not subsequently remeasured. In addition, the conversion option classified as equity will remain in equity until the conversion option is exercised, in which case the balance recognised in equity will be transferred to [share premium/other equity [describe]]. Where the conversion option remains unexercised at the maturity date of the convertible loan note, the balance recognised in equity will be transferred to [retained earnings/other equity [describe]]. No gain or loss is recognised in profit or loss upon conversion or expiration of the conversion option.

Transaction costs that relate to the issue of the convertible loan notes are allocated to the liability and equity components in proportion to the allocation of the gross proceeds. Transaction costs relating to the equity component are recognised directly in equity. Transaction costs relating to the liability component are included in the carrying amount of the liability component and are amortised over the lives of the convertible loan notes using the effective interest method.

Financial liabilities

All financial liabilities are measured subsequently at amortised cost using the effective interest method or at FVTPL.

However, financial liabilities that arise when a transfer of a financial asset does not qualify for derecognition or when the continuing involvement approach applies, and financial guarantee contracts issued by the group, are measured in accordance with the specific accounting policies set out below.

International GAAP Holdings Limited

Financial liabilities at FVTPL

Financial liabilities are classified as at FVTPL when the financial liability is (i) contingent consideration of an acquirer in a business combination, (ii) held for trading or (iii) it is designated as at FVTPL.

A financial liability is classified as held for trading if either:

- it has been acquired principally for the purpose of repurchasing it in the near term
- on initial recognition it is part of a portfolio of identified financial instruments that the group manages together and has a recent actual pattern of short-term profit-taking
- it is a derivative, except for a derivative that is a financial guarantee contract or a designated and effective hedging instrument.

A financial liability other than a financial liability held for trading or contingent consideration of an acquirer in a business combination may be designated as at FVTPL upon initial recognition if either:

- such designation eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise
- the financial liability forms part of a group of financial assets or financial liabilities or both, which is managed and its performance is evaluated on a fair value basis, in accordance with the group's documented risk management or investment strategy, and information about the grouping is provided internally on that basis
- it forms part of a contract containing one or more embedded derivatives, and IFRS 9 permits the entire combined contract to be designated as at FVTPL.

IFRS 7:B5(e)

Financial liabilities at FVTPL are measured at fair value, with any gains or losses arising on changes in fair value recognised in profit or loss to the extent that they are not part of a designated hedging relationship (see Hedge accounting policy). The net gain or loss recognised in profit or loss incorporates any interest paid on the financial liability and is included in the 'Other gains and losses' line item (note 10) in profit or loss.

However, for financial liabilities that are designated as at FVTPL, the amount of change in the fair value of the financial liability that is attributable to changes in the credit risk of that liability is recognised in other comprehensive income, unless the recognition of the effects of changes in the liability's credit risk in other comprehensive income would create or enlarge an accounting mismatch in profit or loss. The remaining amount of change in the fair value of liability is recognised in profit or loss. Changes in fair value attributable to a financial liability's credit risk that are recognised in other comprehensive income are not subsequently reclassified to profit or loss; instead, they are transferred to retained earnings upon derecognition of the financial liability.

Gains or losses on financial guarantee contracts issued by the group that are designated by the group as at FVTPL are recognised in profit or loss.

Fair value is determined in the manner described in note 62(a)(i).

Financial liabilities measured subsequently at amortised cost

Financial liabilities that are not (i) contingent consideration of an acquirer in a business combination, (ii) held-for-trading, or (iii) designated as at FVTPL, are measured subsequently at amortised cost using the effective interest method.

The effective interest method is a method of calculating the amortised cost of a financial liability and of allocating interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash flows (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial liability, or (where appropriate) a shorter period, to the amortised cost of a financial liability.

Financial guarantee contract liabilities

A financial guarantee contract is a contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payments when due in accordance with the terms of a debt instrument.

Financial guarantee contract liabilities are measured initially at their fair values and, if not designated as at FVTPL and do not arise from a transfer of an asset, are measured subsequently at the higher of:

- the amount of the loss allowance determined in accordance with IFRS 9 (see financial assets above)
- the amount recognised initially less, where appropriate, cumulative amortisation recognised in accordance with the revenue recognition policies set out above.

Foreign exchange gains and losses

For financial liabilities that are denominated in a foreign currency and are measured at amortised cost at the end of each reporting period, the foreign exchange gains and losses are determined based on the amortised cost of the instruments. These foreign exchange gains and losses are recognised in the 'other gains and losses' line item in profit or loss (note 10) for financial liabilities that are not part of a designated hedging relationship. For those which are designated as a hedging instrument for a hedge of foreign currency risk foreign exchange gains and losses are recognised in other comprehensive income and accumulated in a separate component of equity.

The fair value of financial liabilities denominated in a foreign currency is determined in that foreign currency and translated at the spot rate at the end of the reporting period. For financial liabilities that are measured as at FVTPL, the foreign exchange component forms part of the fair value gains or losses and is recognised in profit or loss for financial liabilities that are not part of a designated hedging relationship.

Derecognition of financial liabilities

The group derecognises financial liabilities when, and only when, the group's obligations are discharged, cancelled or have expired. The difference between the carrying amount of the financial liability derecognised and the consideration paid and payable is recognised in profit or loss.

When the group exchanges with the existing lender one debt instrument into another one with substantially different terms, such exchange is accounted for as an extinguishment of the original financial liability and the recognition of a new financial liability. Similarly, the group accounts for substantial modification of terms of an existing liability or part of it as an extinguishment of the original financial liability and the recognition of a new liability. It is assumed that the terms are substantially different if the discounted present value of the cash flows under the new terms, including any fees paid net of any fees received and discounted using the original effective interest rate is at least 10 per cent different from the discounted present value of the remaining cash flows of the original financial liability. If the modification is not substantial, the difference between: (1) the carrying amount of the liability before the modification; and (2) the present value of the cash flows after modification is recognised in profit or loss as the modification gain or loss within other gains and losses.

IFRS 7:21 Derivative financial instruments

The group enters into a variety of derivative financial instruments to manage its exposure to interest rate and foreign exchange rate risks, including foreign exchange forward contracts, options and interest rate swaps. Further details of derivative financial instruments are disclosed in notes 34 and 62(c).

Derivatives are recognised initially at fair value at the date a derivative contract is entered into and are subsequently remeasured to their fair value at each reporting date. The resulting gain or loss is recognised in profit or loss immediately unless the derivative is designated and effective as a hedging instrument, in which event the timing of the recognition in profit or loss depends on the nature of the hedge relationship.

A derivative with a positive fair value is recognised as a financial asset whereas a derivative with a negative fair value is recognised as a financial liability. Derivatives are not offset in the financial statements unless the group has both a legally enforceable right and intention to offset. The impact of the master netting agreements on the group's financial position is disclosed in note 34. A derivative is presented as a non-current asset or a non-current liability if the remaining maturity of the instrument is more than 12 months and it is not due to be realised or settled within 12 months. Other derivatives are presented as current assets or current liabilities.

Embedded derivatives

An embedded derivative is a component of a hybrid contract that also includes a non-derivative host – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

Derivatives embedded in hybrid contracts with a financial asset host within the scope of IFRS 9 are not separated. The entire hybrid contract is classified and subsequently measured as either amortised cost or fair value as appropriate.

Derivatives embedded in hybrid contracts with hosts that are not financial assets within the scope of IFRS 9 (e.g. financial liabilities) are treated as separate derivatives when they meet the definition of a derivative, their risks and characteristics are not closely related to those of the host contracts and the host contracts are not measured at FVTPL.

If the hybrid contract is a quoted financial liability, instead of separating the embedded derivative, the group generally designates the whole hybrid contract at FVTPL.

An embedded derivative is presented as a non-current asset or non-current liability if the remaining maturity of the hybrid instrument to which the embedded derivative relates is more than 12 months and is not expected to be realised or settled within 12 months.

IFRS 7:21 Hedge accounting

The group designates certain derivatives as hedging instruments in respect of foreign currency risk and interest rate risk in fair value hedges, cash flow hedges, or hedges of net investments in foreign operations. Hedges of foreign exchange risk on firm commitments are accounted for as cash flow hedges.

At the inception of the hedge relationship, the group documents the relationship between the hedging instrument and the hedged item, along with its risk management objectives and its strategy for undertaking various hedge transactions. Furthermore, at the inception of the hedge and on an ongoing basis, the group documents whether the hedging instrument is effective in offsetting changes in fair values or cash flows of the hedged item attributable to the hedged risk, which is when the hedging relationships meet all of the following hedge effectiveness requirements:

- there is an economic relationship between the hedged item and the hedging instrument
- the effect of credit risk does not dominate the value changes that result from that economic relationship
- the hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the group actually hedges and the quantity of the hedging instrument that the group actually uses to hedge that quantity of hedged item.

If a hedging relationship ceases to meet the hedge effectiveness requirement relating to the hedge ratio but the risk management objective for that designated hedging relationship remains the same, the group adjusts the hedge ratio of the hedging relationship (i.e. rebalances the hedge) so that it meets the qualifying criteria again.

The group designates the full change in the fair value of a forward contract (i.e. including the forward elements) as the hedging instrument for all of its hedging relationships involving forward contracts.

The group designates only the intrinsic value of option contracts as a hedged item, i.e. excluding the time value of the option. The changes in the fair value of the aligned time value of the option are recognised in other comprehensive income and accumulated in the cost of hedging reserve. If the hedged item is transaction-related, the time value is reclassified to profit or loss when the hedged item affects profit or loss. If the hedged item is time-period related, then the amount accumulated in the cost of hedging reserve is reclassified to profit or loss on a rational basis – the group applies straight-line amortisation. Those reclassified amounts are recognised in profit or loss in the same line as the hedged item. If the hedged item is a non-financial item, then the amount accumulated in the cost of hedging reserve is removed directly from equity and included in the initial carrying amount of the recognised non-financial item. Furthermore, if the group expects that some or all of the loss accumulated in cost of hedging reserve will not be recovered in the future, that amount is immediately reclassified to profit or loss.

Note 62(a) sets out details of the fair values of the derivative instruments used for hedging purposes. Movements in the hedging reserve in equity are detailed in note 46.

Fair value hedges

The fair value change on qualifying hedging instruments is recognised in profit or loss except when the hedging instrument hedges an equity instrument designated at FVTOCI in which case it is recognised in other comprehensive income.

The carrying amount of a hedged item not already measured at fair value is adjusted for the fair value change attributable to the hedged risk with a corresponding entry in profit or loss. For debt instruments measured at FVTOCI, the carrying amount is not adjusted as it is already at fair value, but the hedging gain or loss is recognised in profit or loss instead of other comprehensive income. When the hedged item is an equity instrument designated at FVTOCI, the hedging gain or loss remains in other comprehensive income to match that of the hedging instrument.

Where hedging gains or losses are recognised in profit or loss, they are recognised in the same line as the hedged item.

The group discontinues hedge accounting only when the hedging relationship (or a part thereof) ceases to meet the qualifying criteria (after rebalancing, if applicable). This includes instances when the hedging instrument expires or is sold, terminated or exercised. The discontinuation is accounted for prospectively. The fair value adjustment to the carrying amount of the hedged item arising from the hedged risk is amortised to profit or loss from that date.

International GAAP Holdings Limited

Cash flow hedges

The effective portion of changes in the fair value of derivatives and other qualifying hedging instruments that are designated and qualify as cash flow hedges is recognised in other comprehensive income and accumulated under the heading of cash flow hedging reserve, limited to the cumulative change in fair value of the hedged item from inception of the hedge. The gain or loss relating to the ineffective portion is recognised immediately in profit or loss, and is included in the 'other gains and losses' line item.

Amounts previously recognised in other comprehensive income and accumulated in equity are reclassified to profit or loss in the periods when the hedged item affects profit or loss, in the same line as the recognised hedged item. However, when the hedged forecast transaction results in the recognition of a non-financial asset or a non-financial liability, the gains and losses previously recognised in other comprehensive income and accumulated in equity are removed from equity and included in the initial measurement of the cost of the non-financial asset or non-financial liability. This transfer does not affect other comprehensive income. Furthermore, if the group expects that some or all of the loss accumulated in the cash flow hedging reserve will not be recovered in the future, that amount is immediately reclassified to profit or loss.

The group discontinues hedge accounting only when the hedging relationship (or a part thereof) ceases to meet the qualifying criteria (after rebalancing, if applicable). This includes instances when the hedging instrument expires or is sold, terminated or exercised. The discontinuation is accounted for prospectively. Any gain or loss recognised in other comprehensive income and accumulated in cash flow hedge reserve at that time remains in equity and is reclassified to profit or loss when the forecast transaction occurs. When a forecast transaction is no longer expected to occur, the gain or loss accumulated in the cash flow hedge reserve is reclassified immediately to profit or loss.

Hedges of net investments in foreign operations

Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges. Any gain or loss on the foreign currency forward contracts relating to the effective portion of the hedge is recognised in other comprehensive income and accumulated in the foreign currency translation reserve. The gain or loss relating to the ineffective portion is recognised immediately in profit or loss, and is included in the 'other gains and losses' line item.

Gains and losses on the hedging instrument accumulated in the foreign currency translation reserve are reclassified to profit or loss on the disposal or partial disposal of the foreign operation.

Provisions

Provisions are recognised when the group has a present obligation (legal or constructive) as a result of a past event, it is probable that the group will be required to settle that obligation and a reliable estimate can be made of the amount of the obligation.

The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation at the reporting date, taking into account the risks and uncertainties surrounding the obligation. Where a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (when the effect of the time value of money is material).

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

Restructurings

A restructuring provision is recognised when the group has developed a detailed formal plan for the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement the plan or announcing its main features to those affected by it. The measurement of a restructuring provision includes only the direct expenditures arising from the restructuring, which are those amounts that are both necessarily entailed by the restructuring and not associated with the ongoing activities of the entity.

Warranties

Provisions for the expected cost of warranty obligations under local sale of goods legislation are recognised at the date of sale of the relevant products, at the directors' best estimate of the expenditure required to settle the group's obligation.

Onerous contracts

Present obligations arising under onerous contracts are recognised and measured as provisions. An onerous contract is considered to exist where the group has a contract under which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.

International GAAP Holdings Limited

Restoration provisions

Provisions for the costs to restore leased plant assets to their original condition, as required by the terms and conditions of the lease, are recognised when the obligation is incurred, either at the commencement date or as a consequence of having used the underlying asset during a particular period of the lease, at the directors' best estimate of the expenditure that would be required to restore the assets. Estimates are regularly reviewed and adjusted as appropriate for new circumstances.

Contingent liabilities acquired in a business combination

Contingent liabilities acquired in a business combination are initially measured at fair value at the acquisition date. At the end of subsequent reporting periods, such contingent liabilities are measured at the higher of the amount that would be recognised in accordance with IAS 37 and the amount recognised initially less cumulative amount of income recognised in accordance with the principles of IFRS 15.

Own shares

Own shares represent the shares of the parent company International GAAP Holdings Limited that are held in treasury or by the employee benefit trust. Own shares are measured at cost and deducted from equity.

Share-based payments

Share-based payment transactions of the parent company

Equity-settled share-based payments to employees and others providing similar services are measured at the fair value of the equity instruments at the grant date. The fair value excludes the effect of non-market-based vesting conditions. Details regarding the determination of the fair value of equity-settled share-based transactions are set out in note 57.

The fair value determined at the grant date of the equity-settled share-based payments is expensed on a straight-line basis over the vesting period, based on the group's estimate of the number of equity instruments that will eventually vest. At each reporting date, the group revises its estimate of the number of equity instruments expected to vest as a result of the effect of non-market-based vesting conditions. The impact of the revision of the original estimates, if any, is recognised in profit or loss such that the cumulative expense reflects the revised estimate, with a corresponding adjustment to reserves.

Equity-settled share-based payment transactions with parties other than employees are measured at the fair value of the goods or services received, except where that fair value cannot be estimated reliably, in which case they are measured at the fair value of the equity instruments granted, measured at the date the entity obtains the goods or the counterparty renders the service.

For cash-settled share-based payments, a liability is recognised for the goods or services acquired, measured initially at the fair value of the liability. At each reporting date until the liability is settled, and at the date of settlement, the fair value of the liability is remeasured, with any changes in fair value recognised in profit or loss for the year.

Share-based payment transactions of the acquiree in a business combination

When the share-based payment awards held by the employees of an acquiree (acquiree awards) are replaced by the group's share-based payment awards (replacement awards), both the acquiree awards and the replacement awards are measured in accordance with IFRS 2 ("market-based measure") at the acquisition date. The portion of the replacement awards that is included in measuring the consideration transferred in a business combination equals the market-based measure of the acquiree awards multiplied by the ratio of the portion of the vesting period completed to the greater of the total vesting period or the original vesting period of the acquiree award. The excess of the market-based measure of the replacement awards over the market-based measure of the acquiree awards included in measuring the consideration transferred is recognised as remuneration cost for post-combination service.

However, when the acquiree awards expire as a consequence of a business combination and the group replaces those awards when it does not have an obligation to do so, the replacement awards are measured at their market-based measure in accordance with IFRS 2. All of the market-based measure of the replacement awards is recognised as remuneration cost for post-combination service.

At the acquisition date, when the outstanding equity-settled share-based payment transactions held by the employees of an acquiree are not exchanged by the group for its share-based payment transactions, the acquiree share-based payment transactions are measured at their market-based measure at the acquisition date. If the share-based payment transactions have vested by the acquisition date, they are included as part of the non-controlling interest in the acquiree. However, if the share-based payment transactions have not vested by the acquisition date, the market-based measure of the unvested share-based payment transactions is allocated to the non-controlling interest in the acquiree based on the ratio of the portion of the vesting period completed to the greater of the total vesting period or the original vesting period of the share-based payment transaction. The balance is recognised as remuneration cost for post-combination service.

International GAAP Holdings Limited

Factoring of receivables

When an entity enters into arrangements for factoring of receivables where they are not fully derecognised, it is important that the policy adopted for the treatment of cash flows arising is clearly explained and that any non-cash financing transactions are disclosed in accordance with IAS 7:43. In particular, an explanation of whether the cash flows received on the receivables are treated as operating inflows with associated financing outflows that are deemed to repay the financing liability that was recognised when the receivables were transferred. Balances that will give rise to financing cash flows should also be included in the disclosure of changes in such balances required by IAS 7:44A-44E.

4. Critical accounting judgements and key sources of estimation uncertainty

Commentary:

The following are examples of the types of disclosures that might be required in this area. The nature of these disclosures is specific to an individual group's particular circumstances. Although the illustrative financial statements illustrate disclosures to comply with these requirements, it is unlikely that these specific illustrative disclosures would be appropriate other than in very rare circumstances.

In applying the group's accounting policies, which are described in note 3, the directors are required to make judgements (other than those involving estimations) that have a significant impact on the amounts recognised and to make estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

IAS 1:122

Critical judgements in applying the group's accounting policies

The following are the critical judgements, apart from those involving estimations (which are presented separately below), that the directors have made in the process of applying the group's accounting policies and that have the most significant effect on the amounts recognised in financial statements.

IFRS 15:123(a) IFRS 15:125

Judgements in determining the timing of satisfaction of performance obligations

Note 7 describes the expenditure required in the year for rectification work carried out on goods supplied to one of the group's major customers. These goods were delivered to the customer in the months of __ to __ 2024, and shortly thereafter the defects were identified by the customer. Following negotiations, a schedule of works was agreed, which will involve expenditure by the group until 2025. In the light of the problems identified, management was required to consider whether it was appropriate to recognise the revenue from these transactions of

CU_ million in the current year, in line with the group's general policy of recognising revenue when goods are delivered, or whether it was more appropriate to defer recognition until the rectification work was complete.

In making their judgement, the directors considered the detailed criteria for the recognition of revenue set out in IFRS 15 and, in particular, whether the group had transferred control of the goods to the customer. Following the detailed quantification of the group's liability in respect of rectification work, and the agreed limitation on the customer's ability to require further work or to require replacement of the goods, the directors are satisfied that control has been transferred and that recognition of the revenue in the current year is appropriate, in conjunction with the recognition of an appropriate warranty provision for the rectification costs.

Capitalisation of borrowing costs

As described in note 3, the group capitalises borrowing costs directly attributable to the acquisition, construction or production of qualifying assets. Capitalisation of the borrowing costs relating to construction of the group's premises in [A Land] was suspended in 2023, while the development was delayed as management reconsidered its detailed plans. Capitalisation of borrowing costs recommenced in 2024 – following the finalisation of revised plans, and the resumption of the activities necessary to prepare the asset for its intended use. Although construction of the premises was not restarted until May 2024, borrowing costs have been capitalised from February 2024, at which time the technical and administrative work associated with the project recommenced.

International GAAP Holdings Limited

Business model assessment

Classification and measurement of financial assets depends on the results of the SPPI and the business model test (please see financial assets sections of note 3). The group determines the business model at a level that reflects how groups of financial assets are managed together to achieve a particular business objective. This assessment includes judgement reflecting all relevant evidence including how the performance of the assets is evaluated and their performance measured, the risks that affect the performance of the assets and how these are managed and how the managers of the assets are compensated. The group monitors financial assets measured at amortised cost or fair value through other comprehensive income that are derecognised prior to their maturity to understand the reason for their disposal and whether the reasons are consistent with the objective of the business for which the asset was held. Monitoring is part of the group's continuous assessment of whether the business model for which the remaining financial assets are held continues to be appropriate and if it is not appropriate whether there has been a change in business model and so a prospective change to the classification of those assets. No such changes were required during the periods presented.

Significant increase in credit risk

As explained in note 3, ECL are measured as an allowance equal to 12-month ECL for stage 1 assets, or lifetime ECL for stage 2 or stage 3 assets. An asset moves to stage 2 when its credit risk has increased significantly since initial recognition. IFRS 9 does not define what constitutes a significant increase in credit risk. In assessing whether the credit risk of an asset has significantly increased, the group takes into account qualitative and quantitative reasonable and supportable forward-looking information.

Deferred taxation on investment properties

For the purposes of measuring deferred tax liabilities or deferred tax assets arising from investment properties that are measured using the fair value model, the directors have reviewed the group's investment property portfolios and concluded that the group's investment properties are not held under a business model whose objective is to consume substantially all of the economic benefits embodied in the investment properties over time, rather than through sale. Therefore, in determining the group's deferred taxation on investment properties, the directors have determined that the presumption that the carrying amounts of investment properties measured using the fair value model are recovered entirely through sale is not rebutted. As a result, the group has not recognised any deferred taxes on changes in fair value of investment properties as the group is not subject to any income taxes on the fair value changes of the investment properties on disposal.

IFRS 12:7(a)

IFRS 12:9(b)

Control over Subsidiary B Limited

Significant influence over Associate B Limited

Note 20 describes that Subsidiary B Limited is a subsidiary of the group even though the group has only a 45 per cent ownership interest and has only 45 per cent of the voting rights in Subsidiary B Limited. Subsidiary B Limited is listed on the stock exchange of [A Land]. The group has held its 45 per cent ownership since June 2018 and the remaining 55 per cent of the ownership interests are held by thousands of shareholders that are unrelated to the group.

The directors of the parent company assessed whether or not the group has control over Subsidiary B Limited based on whether the group has the practical ability to direct the relevant activities of Subsidiary B Limited unilaterally. In making their judgement, the directors considered the group's absolute size of holding in Subsidiary B Limited and the relative size of and dispersion of the shareholdings owned by the other shareholders. After assessment, the directors concluded that the group has a sufficiently dominant voting interest to direct the relevant activities of Subsidiary B Limited and therefore the group has control over Subsidiary B Limited.

If the directors had concluded that the 45 per cent ownership interest was insufficient to give the group control, Subsidiary B Limited would instead have been classified as an associate and the group would have accounted for it using the equity method of accounting.

IFRS 12:7(b)

IFRS 12:9(e)

Note 21 describes that Associate B Limited is an associate of the group although the group only owns a 17 per cent ownership interest in Associate B Limited. The group has significant influence over Associate B Limited by virtue of its contractual right to appoint two out of seven directors to the board of directors of that entity.

International GAAP Holdings Limited

Judgement in identifying whether a contract includes a lease - Contract for the supply of sports shoes

The group has entered into a contract with [Manufacturer A] for the supply of sports shoes for a three-year period. Each month the type of sports shoes and the production volume, up to a limit of [X] pairs, are determined by the group and are not specified in the contract.

[Manufacturer A] has only one factory that can meet the needs of the group and is unable to supply the sports shoes from another factory or source the sports shoes from a third party supplier. [Manufacturer A] makes all decisions about the operations of the factory, including the production level at which to run the factory and which customer contracts to fulfil with the output of the factory that is not used to fulfil the group's contract for that month.

The directors of the parent company assessed whether or not the group has contracted for the rights to substantially all of the capacity of the factory and whether the contract with [Manufacturer A] contains a lease for the factory. After making inquiries based on forecast production volumes over the contract term the directors have established that [Manufacturer A] can regularly use the factory for other purposes during the course of the contract to supply other customers and therefore the group does not have the right to obtain substantially all of the economic benefits from the use of the factory. As a result the directors concluded that the group has not contracted for substantially all of the capacity of the factory, including the plant therein, and therefore the contract does not contain a lease.

IAS 1:125

IAS 1:128

IAS 1:129 IAS 1:131

Key sources of estimation uncertainty

The key assumptions concerning the future, and other key sources of estimation uncertainty at the reporting period that may have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are discussed below.

Taxation provisions

The group's current tax provision of CU__ relates to management's assessment of the amount of tax payable on open tax positions where the liabilities remain to be agreed with [insert name of relevant Tax Authority]. Uncertain tax items for which a provision of CU__ is made, relate principally to the interpretation of tax legislation regarding arrangements entered into by the group. Due to the uncertainty associated with such tax items, there is a possibility that, on conclusion of open tax matters at a future date, the final outcome may differ significantly. Whilst a range of outcomes is reasonably possible, the extent of the reasonably possible range is from additional liabilities of up to CU__ to a reduction in liabilities of up to CU__.

Impairment testing

Following the assessment of the recoverable amount of goodwill allocated to 'Leisure goods – retail outlets', to which goodwill of CU__ is allocated, the directors consider the recoverable amount of goodwill allocated to 'Leisure goods – retail outlets' to be most sensitive to the achievement of the 2025 budget. Budgets comprise forecasts of revenue, staff costs and overheads based on current and anticipated market conditions that have been considered and approved by the board. Whilst the group is able to manage most of 'Leisure goods – retail outlets' costs, the revenue projections are inherently uncertain due to the short-term nature of the business and unstable market conditions. Revenue of the CGU is most sensitive to changes in the sectors demand for sales in retail outlets, reflecting the increased use of internet sales by rivals, a service which the group does not currently offer.

The market for 'Leisure goods – retail outlets' products has seen a significant slowdown over the past 18 months due to a decline in the customer appetite for retail sales and increases in internet sales of rivals in the sector. It is possible that further underperformance may occur in 2025 if prevailing trends continue.

The sensitivity analysis in respect of the recoverable amount of 'Leisure goods – retail outlets' goodwill is presented in note 16.

Calculation of loss allowance

When measuring ECL the group uses reasonable and supportable forward-looking information, which is based on assumptions for the future movement of different economic drivers and how these drivers will affect each other.

Loss given default is an estimate of the loss arising on default. It is based on the difference between the contractual cash flows due and those that the lender would expect to receive, taking into account cash flows from collateral and integral credit enhancements.

Probability of default constitutes a key input in measuring ECL. Probability of default is an estimate of the likelihood of default over a given time horizon, the calculation of which includes historical data, assumptions and expectations of future conditions.

If the ECL rates on trade receivables between 61 and 90 days past due had been __ per cent higher (lower) as of December 2024, the loss allowance on trade receivables would have been CU_ million (2023: CU_ million) higher (lower).

International GAAP Holdings Limited

If the ECL rates on trade receivables between 31 and 60 days past due had been __ per cent higher (lower) as of December 2024, the loss allowance on trade receivables would have been CU_ million (2023: CU_ million) higher (lower).

Discount rate used to determine the carrying amount of the group's defined benefit obligation

The determination of the group's defined benefit obligation depends on certain assumptions, which include selection of the discount rate. The discount rate is set by reference to market yields at the end of the reporting period on high quality corporate bonds. Significant assumptions are required to be made when setting the criteria for bonds to be included in the population from which the yield curve is derived. The most significant criteria considered for the selection of bonds include the issue size of the corporate bonds, quality of the bonds and the identification of outliers which are excluded. These assumptions are considered to be a key source of estimation uncertainty as relatively small changes in the assumptions used may have a significant effect on the group's financial statements within the next year. Further information on the carrying amounts of the group's defined benefit obligation and the sensitivity of those amounts to changes in discount rate are provided in note 58.

Fair value measurements and valuation processes

Some of the group's assets and liabilities are measured at fair value for financial reporting purposes. The board of directors of the parent company has set up a valuation committee, which is headed up by the Chief Financial Officer of the parent company, to determine the appropriate valuation techniques and inputs for fair value measurements.

In estimating the fair value of an asset or a liability, the group uses market-observable data to the extent it is available. Where Level 1 inputs are not available, the group engages third party qualified valuers to perform the valuation. The valuation committee works closely with the qualified external valuers to establish the appropriate valuation techniques and inputs to the model. The Chief Financial Officer reports the valuation committee's findings to the board of directors of the parent company every quarter to explain the cause of fluctuations in the fair value of the assets and liabilities.

The valuations of private equity investments, contingent consideration in business combinations and non-derivative financial assets held for trading are particularly sensitive to changes in one or more unobservable inputs which are considered reasonably possible within the next financial year. Further information on the carrying amounts of these assets and the sensitivity of those amounts to changes in unobservable inputs are provided in note 62(a)(i).

Provision for restoration of contaminated land

On 15 December 2024, new legislation in [A Land] was enacted which resulted in the requirement for the group to clean up historically contaminated waste sites in [A Land] and bear the costs thereof. Consequently, a provision of CU_ million has been recognised. In estimating the provision, the directors have made assumptions regarding the interpretation of the legislation and have estimated costs based on currently available information about the likely extent of contamination and potential clean-up techniques. Due to the associated uncertainty, it is possible that estimates may need to be revised during the next year as interpretations of the legislation evolve and the extent of contamination and potential approaches to clean-up are assessed in more detail. Whilst a range of outcomes is possible, the directors believe that the reasonably possible range is an increase in provisions of up to CU_ million to a reduction in provisions of up to CU_ million. See note 39 for further details.

Assessment as to whether the right-of-use assets are impaired

In January 2018, [Subsidiary D Limited], a subsidiary of the group, entered into a 10-year lease for an office building located in [location]. Following the acquisition of [Acquisition A Limited] on [date] 2024 and the subsequent restructuring programme, the group identified that the office space occupied by [Subsidiary E Limited], which is also located in [location], could accommodate all of the staff of [Subsidiary D Limited], and took the decision to relocate staff to a single office. The leased property previously occupied by [Subsidiary D Limited], has been marketed with a local estate agent and is expected to be sub-leased by the firm for the remainder of the lease term.

The directors have estimated that the entirety of the lease payment will be recoverable through the sub-lease of the property. This reflects the current achievable market rates for similar properties with similar lease terms and therefore no impairment has been recognised. The carrying amount of right-of-use asset in respect of the property is CU__ at 31 December 2024 (2023; CU__).

In estimating the recoverable amount of the right-of-use asset, the directors have made assumptions about the achievable market rates for similar properties with similar lease terms. Due to the associated uncertainty, it is possible that the estimates of the amount of lease payment that will be recovered through the sub-lease of the property may need to be revised during the next year. Achieving a sub-lease for only 95 per cent of the lease payment is considered reasonably possible based on recent experience in the market and would lead to an impairment charge of CU__ against the right-of-use asset in respect of the property.

IFRS 15:113(a)

5. Revenue

IFRS 15:115

The group derives its revenue from contracts with customers for the transfer of goods and services over time and at a point in time in the following major product lines. The disclosure of revenue by product line is consistent with the revenue information that is disclosed for each reportable segment under IFRS 8 *Operating Segments* (see note 6).

IFRS 15:114 IFRS 15:B87-B89

Disaggregation of revenue

31/12/2024	31/12/2023

Goods transferred over time

Services transferred at a point in time

Services transferred over time

Commentary:

IFRS 15:114 requires an entity to disaggregate revenue recognised from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. This disaggregation will depend on the entity's individual facts and circumstances.

In the illustrative financial statements the group has assessed that the disaggregation of revenue by operating segments is appropriate in meeting this disclosure requirement as this is the information regularly reviewed by the chief operating decision maker (CODM) in order to evaluate the financial performance of the entity.

If an entity discloses disaggregated revenue on a basis other than that used for revenue information disclosed for each reportable segment then the entity should disclose sufficient information to allow users of the financial statements to understand the relationship between these two disclosures.

International GAAP Holdings Limited Source The transaction price allocated to [unsatisfied and/or partially unsatisfied] obligations at 31 December 2024 are as set out IFRS 15:120(a) below. 31/12/2024 31/12/2023 CU CU Maintenance obligations relating to electronic equipment Installation of computer software services Construction of residential properties Management expects that __ per cent of the transaction price allocated to the [unsatisfied and/or partially unsatisfied] IFRS 15:120(b) contracts as of the year ended 2024 will be recognised as revenue during the next reporting period (CU__ million). The remaining __ per cent, CU_ million will be recognised in the 2026 financial year and CU_ million in the 2027 financial year. Commentary: There is no requirement in IFRS 15 for contract balances (i.e. contract assets, receivables and contract liabilities) to be disclosed together at a single place in the financial statements. Indeed, entities will likely continue to include balances arising from contracts with customers within the same financial statement line item and related note as previously under IAS 18 Revenue (e.g. contract liabilities within a deferred revenue note). IFRS 15 allows entities to use terms other than contract asset and contract liability to describe such balances. Contract balances and the related disclosures have been included in the following places in the notes to the group's accounts: Receivables Balance described as 'Trade receivables' (note 31) Contract assets Note 27 Note 28 Contract costs Contract liabilities Note 60 Materiality considerations will affect the line items to be disclosed separately within each relevant IFRS 15 contract balance. A single

net contract asset or liability should be presented for each contract balance.

International GAAP Holdings Limited

6. Operating segments

Commentary:

The following segment information is required by IFRS 8 to be presented in the consolidated financial statements of a group with a parent (and in the separate or individual financial statements of an entity):

- whose debt or equity instruments are traded in a public market (a domestic or foreign stock exchange or an over the counter market, including local and regional markets)
- that files, or is in the process of filing, its (consolidated) financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market.

IFRS 8:22 requires entities to give a brief description of the operating segments that have been aggregated and the economic indicators that have been assessed in determining the aggregated operating segments share similar economic characteristics.

According to IFRS 8:12, two or more operating segments may be aggregated into a single operating segment if the segments have similar economic characteristics and the segments are similar in each of the following respects:

- the nature of the products and services
- the nature of the production processes
- the type or class of customer for their products and services
- the methods used to distribute their products or provide their services
- if applicable, the nature of the regulatory environment, for example, banking, insurance or public utilities.

IFRS 8:22

Products and services from which reportable segments derive their revenues

Information reported to the group's Chief Executive (the Chief Operating Decision Maker (CODM)) for the purposes of resource allocation and assessment of segment performance is focused on the category of customer for each type of activity. The principal categories of customer are direct sales to major customers, wholesalers and internet sales. The group's reportable segments under IFRS 8 are therefore as follows:

[Segment A] – Electronic equipment – direct sale customers

[Segment B] – Electronic equipment – wholesale customers

[Segment C] – Electronic equipment – internet customers

[Segment D] – Leisure goods – wholesale customers

[Segment E] – Leisure goods – retail outlets

[Segment F] - Computer software – installation of computer software for specialised business applications

[Segment G] - Construction - construction of residential properties

IFRS 8:22(aa)

The leisure goods segments supply sports shoes and equipment, as well as outdoor play equipment.

The electronic equipment (direct sales) segment includes a number of direct sales operations in various cities within [A Land] each of which is considered as a separate operating segment by the CODM. For financial statements presentation purposes, these individual operating segments have been aggregated into a single operating segment taking into account the following factors:

- these operating segments have similar long-term gross profit margins
- the nature of the products and production processes are similar
- the methods used to distribute the products to the customers are the same
- [other factors, please specify].

Commentary:

In June 2024, the IFRS Interpretations Committee published an agenda decision titled 'Disclosure of Revenues and Expenses for Reportable Segments', which considers the requirement in IFRS 8:23(f) to disclose, for each reportable segment, material items of income and expense disclosed in accordance with IAS 1:97.

The key points highlighted in the agenda decision include:

- an entity is required to disclose the specified amounts for each reportable segment when they are:
- included in the measure of segment profit or loss reviewed by the chief operating decision maker (CODM), even if they are not separately provided to or reviewed by the CODM, or
- regularly provided to the CODM, even if they are not included in the measure of segment profit or loss
- the material items to be disclosed include, but are not limited to, the items listed in IAS 1:98 (e.g. write-downs of assets, restructuring expenses or gains/losses on disposal)
- an entity is not required to disclose, by reportable segment, each item of income and expense presented in its statement of profit or loss or disclosed in the notes
- in determining the information to disclose for each reportable segment, an entity applies judgement and considers:
- the principles of materiality and aggregation in IAS 1, and
- the core principle of IFRS 8, which requires an entity to disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates.

[Segment C] – Electronic equipment – internet customers		
[Segment D] – Leisure goods – wholesale customers		
[Segment E] – Leisure goods – retail outlets		
[Segment F] – Computer software – installation of computer software for specialised business applications		
[Segment G] – Construction – construction of residential properties		
Other		
Total segment assets		
Assets relating to discontinued operations		
Unallocated assets		
Consolidated total assets		

IFRS 8:27(c)

IFRS 8:28(c)

For the purposes of monitoring segment performance and allocating resources between segments the group's Chief Executive monitors the tangible, intangible and financial assets attributable to each segment. All assets are allocated to reportable segments with the exception of investments in associates and joint ventures, other financial assets (except for trade and other receivables) (see note 31) and tax assets. Goodwill has been allocated to reportable segments as described in note 16. Assets used jointly by reportable segments are allocated on the basis of the revenues earned by individual reportable segments.

International GAAP Holdings Limited Source 12. Income tax 31/12/2024 31/12/2023 CU CU Corporation income tax: IAS 12:79-80 Current year Adjustments in respect of prior years Deferred tax (see note 35) IAS 12:79-80 Origination and reversal of temporary differences Effect of changes in tax rates Write-down of previously recognised deferred tax assets Other [describe] The standard rate of corporation tax applied to reported profit is __per cent (2023: __per cent). IAS 12:85 Commentary: The applicable rate used in the tax reconciliation should provide the most meaningful information to users of the financial statements. When profits are earned across a number of jurisdictions default to the tax rate in the country of domicile may not provide the most meaningful information. It may be more appropriate to use a weighted average applicable rate for the year, reflecting the applicable rates for the countries in which the group earned profits. The applicable rate has changed following [describe the impact of any changes in the tax authorities' tax rates (and tax laws) that IAS 12:81(d) have been enacted or substantively enacted by the end of the reporting period]. Taxation for other jurisdictions is calculated at the rates prevailing in the respective jurisdictions. No tax charge or credit arose on the disposal of [name of subsidiary]. IAS 12:81(h) The group has applied the temporary exception issued by the IASB in May 2023 from the accounting requirements for IAS 12:82A deferred taxes in IAS 12. Accordingly, the Group neither recognises nor discloses information about deferred tax assets and liabilities related to Pillar Two income taxes. On [date] 2023, the government of [A Land], where the parent company is incorporated, enacted the Pillar Two income taxes legislation effective from 1 January 2024. Under the legislation, the parent company is required to pay, in [A Land], top-up tax on profits of its subsidiaries that are taxed at an effective tax rate of less than 15 per cent. The main jurisdictions in which exposures to this tax may exist include [C Land] and [D Land]. The group's current tax expense (income) related to Pillar Two income taxes is CU. IAS 12:88B

Source International GAAP Holdings Limited

Commentary:

Many countries have now enacted Pillar Two-related laws, some of which became effective 1 January 2024, and it is anticipated that many more will follow suit throughout 2024. For entities incorporated in jurisdictions where Pillar Two income taxes legislation is not yet effective, additional disclosure is required in line with IAS 12:88C-88D. Example wording of the additional disclosures is as follows:

IAS 12:88C-88D

As at 31 December 2024, approximately __ per cent of the group's annual profits may be subject to the tax which are currently taxed at the average effective tax rate applicable to those profits of __ per cent. This information is based on the profits and tax expense determined as part of the preparation of the group's consolidated financial statements, considering only certain adjustments that would have been required applying the legislation, namely [explain which adjustments were made]. Because not all of the adjustments that would have been required by the legislation were made, the actual impact that the Pillar Two income taxes legislation would have had on the group's results if it had been in effect for the year ending 31 December 2024 may have been significantly different.

The group is continuing to assess the impact of the Pillar Two income taxes legislation on its future financial performance.

IAS 12:81(c)

The charge for the year can be reconciled to the profit before tax as follows:

31/12/2024 31/12/2023 CU

Profit before tax on continuing operations

Tax at the [A Land] corporation tax rate of __ per cent (2023: __ per cent)

Tax effect of share of results of associates

Tax effect of expenses that are not deductible in determining taxable profit

Tax effect of income not taxable in determining taxable profit

Tax effect of utilisation of tax losses not previously recognised

Change in unrecognised deferred tax assets

Effect of different tax rates of subsidiaries operating in other jurisdictions

Tax expense for the year

IAS 12:84

Commentary:

The reconciliation should enable users of financial statements to understand whether the relationship between tax expense (income) and accounting profit is unusual and to understand the significant factors that could affect that relationship in the future. Distinguishing between recurring and non-recurring items may assist with this. It is also informative to state the effective tax rate. The relationship between tax expense (income) and accounting profit may be affected by such factors as revenue that is exempt from taxation, expenses that are not deductible in determining taxable profit (tax loss), the effect of tax losses and the effect of foreign tax rates and it is useful to explain these items.

International GAAP Holdings Limited Source In addition, on [date] the board resolved to dispose of the group's [specify] operations and negotiations with several IFRS 5:41 interested parties have subsequently taken place. The disposal is consistent with the group's long-term policy to focus its IFRS 5:38 activities on the group's other businesses. These operations, which are expected to be sold within 12 months, have been classified as a disposal group held for sale and presented separately in the statement of financial position. The proceeds of disposal are expected to substantially exceed the carrying amount of the related net assets and accordingly no impairment losses have been recognised on the classification of these operations as held for sale. The major classes of assets and liabilities comprising the operations classified as held for sale are as follows: 31/12/2024 CU Goodwill Property, plant and equipment Inventories Trade and other receivables Cash and cash equivalents Total assets classified as held for sale Trade and other payables Tax liabilities Bank overdrafts and loans Total liabilities associated with assets classified as held for sale Net assets of disposal group 14. Dividends 31/12/2024 31/12/2023 CU CU Amounts recognised as distributions to equity holders in the year: Final dividend for the year ended 31 December 2023 of CU_ (2022: CU_) per share Interim dividend for the year ended 31 December 2024 of CU_ (2023: CU_) per share Proposed final dividend for the year ended 31 December 2024 of CU__(2023: CU__) per share IAS 1:107

IAS 1:137(a) IAS 10:13

The proposed final dividend is subject to approval by shareholders at the annual general meeting and has not been included as a liability in these financial statements. The proposed dividend is payable to all shareholders on the register of members on [insert date]. The total estimated dividend to be paid is CU__ per share. The payment of this dividend will not have any tax consequences for the group.

Under an arrangement dated [date], [name] who holds [number] ordinary shares representing __ per cent of the parent company's called up share capital, has agreed to waive all dividends due to [him/her] for a period of [specify].

International GAAP Holdings Limited Source 15. Earnings per share IAS 33:2-3 Commentary: IAS 33 requires that earnings per share (EPS) information be presented in the consolidated financial statements of a group with a parent (and in the separate or individual financial statements of an entity): whose ordinary shares or potential ordinary shares are traded in a public market (a domestic or foreign stock exchange or an overthe-counter market, including local or regional markets), or that files, or is in the process of filing, its (consolidated) financial statements with a securities commission or other regulatory organisation for the purpose of issuing ordinary shares in a public market. If other entities choose to disclose EPS information voluntarily in their financial statements that comply with IFRS Accounting Standards, the disclosures in relation to the EPS information should comply fully with the requirements set out in IAS 33. From continuing and discontinued operations The calculation of the basic and diluted earnings per share is based on the following data: 31/12/2024 31/12/2023 CU CU **Earnings** IAS 33:70(a) Earnings for the purposes of basic earnings per share being net profit attributable to owners of the parent company Effect of dilutive potential ordinary shares: Interest on convertible loan notes (net of tax) Earnings for the purposes of diluted earnings per share 31/12/2024 31/12/2023 **Number of shares** Weighted average number of ordinary shares for the purposes of basic earnings per IAS 33:70(b) Effect of dilutive potential ordinary shares IAS 33:70(c) Share options Convertible loan notes Weighted average number of ordinary shares for the purposes of diluted earnings per share The denominator for the purposes of calculating both basic and diluted earnings per share has been adjusted to reflect the

capitalisation issue in 2024.

IAS 36:134-135 The carrying amount of goodwill has been allocated to CGUs as follows: | 31/12/2024 | 31/12/2023 | | CU | CU | | [Segment C] - Electronic equipment - internet sales | | [Segment G] - Construction - Alpha Construction | | [Segment G] - Construction - other |

The group tests goodwill annually for impairment, or more frequently if there are indications that goodwill might be impaired.

Electronic equipment - internet sales

The recoverable amount of the 'electronic equipment – internet sales' segment as a cash-generating unit is determined based on a value in use calculation which uses cash flow projections based on financial budgets approved by the directors covering a five-year period and a pre-tax discount rate of __ per cent per annum

(2023: __ per cent per annum) calculated by [describe method used to determine the discount rate].

The key assumptions used by management in setting the financial budgets for the initial five-year period were as follows:

Forecast sales growth rates

Forecast sales growth rates are based on past experience adjusted for [discuss reasons for adjusting the historic measures, for example, sales/market trends and the strategic decisions made in respect of the cash-generating unit].

Operating profits

Operating profits are forecast based on historical experience of operating margins, adjusted for the impact of [describe reasons for adjusting the historical measures, for example, changes to product costs and cost saving initiatives].

Cash conversion

Cash conversion is the ratio of operating cash flows to operating profit. Management forecasts cash conversion rates based on historical experience.

Cash flows beyond that five-year period have been extrapolated using a steady __ per cent (2023: __ per cent) per annum growth rate. This growth rate exceeds by __ percentage points the long-term average growth rate for the international electronic equipment market. However, among other factors, the internet sales cash-generating unit benefits from the protection of a 20-year patent on the Series Z electronic equipment, granted in 2018, which is still acknowledged as one of the top models in the market.

The steady growth rate of __ per cent is estimated by the directors of the parent company based on past performance of the cash-generating unit and their expectations of market development. The directors estimate that a decrease in growth rate by __ per cent to __ per cent would reduce the headroom in the cash-generating unit to nil but would not result in an impairment charge.

Leisure goods - retail outlets

The recoverable amount of this cash-generating unit is determined based on a value in use calculation which uses cash flow projections based on financial budgets approved by the directors covering a five-year period, and a pre-tax discount rate of __per cent per annum (2023: __per cent per annum) calculated by [describe method used to determine the discount rate].

The key assumptions used by management in setting the financial budgets for the initial five-year period were as follows: Forecast sales growth rates

Forecast sales growth rates are based on past experience adjusted for [discuss reasons for adjusting the historic measures, for example, sales/market trends and the strategic decisions made in respect of the cash-generating unit].

Operating profits

Operating profits are forecast based on historical experience of operating margins, adjusted for the impact of [describe reasons for adjusting the historical measures, for example, changes to product costs and cost saving initiatives].

Source

International GAAP Holdings Limited

Cash conversion

Cash conversion is the ratio of operating cash flows to operating profit. Management forecasts cash conversion rates based on historical experience.

Cash flow projections during the budget period are based on the same expected gross margins and inventory price inflation throughout the budget period. The cash flows beyond that five-year period have been extrapolated using a steady __ per cent (2023: __ per cent) per annum growth rate which is the projected long-term average growth rate for the international leisure goods market.

Construction operations - Alpha Construction

The goodwill associated with Alpha Construction arose when that business was acquired by the group in 2016. The business has continued to operate on a satisfactory basis, but without achieving any significant increase in market share.

During the year, the government of [A Land] introduced new regulations requiring registration and certification of builders for government contracts. In the light of the decision to focus the group's construction activities through the other operating units in Subsidiary C Limited, the directors have decided not to register Alpha Construction for this purpose, which means that it has no prospects of obtaining future contracts. The directors have consequently determined to write off the goodwill directly related to Alpha Construction amounting to CU__. No other write-down of the assets of Alpha Construction is considered necessary. Contracts in progress at the end of the year will be completed without loss to the group. The recoverable amount of the Alpha Construction cash-generating unit amounted to CU__ as at 31 December 2024.

The impairment loss has been included in profit or loss in the [other expenses/cost of sales] line item.

Construction operations - other

The recoverable amount of the group's remaining construction operations has been determined based on a value in use calculation which uses cash flow projections based on financial budgets approved by the directors covering a five-year period, and a pre-tax discount rate of __ per cent per annum (2023: __ per cent per annum) calculated by [describe method used to determine the discount rate].

The key assumptions used by management in setting the financial budgets for the initial five-year period were as follows:

Forecast sales growth rates

Forecast sales growth rates are based on past experience adjusted for [discuss reasons for adjusting the historic measures, for example, sales/market trends and the strategic decisions made in respect of the cash-generating unit].

Operating profits

Operating profits are forecast based on historical experience of operating margins, adjusted for the impact of [describe reasons for adjusting the historical measures, for example, changes to product costs and cost saving initiatives].

Cash conversion

Cash conversion is the ratio of operating cash flows to operating profit. Management forecasts cash conversion rates based on historical experience.

Cash flows beyond that five-year period have been extrapolated using a steady __ per cent (2023: __ per cent) per annum growth rate. This growth rate does not exceed the long-term average growth rate for the construction market in [A Land].

Sensitivity analysis

The group has conducted an analysis of the sensitivity of the impairment test to changes in the key assumptions used to determine the recoverable amount for each of the group of CGUs to which goodwill is allocated. The directors believe that any reasonably possible change in the key assumptions on which the recoverable amount of 'Electronic equipment – internet sales' and 'Construction operations – other' is based would not cause the aggregate carrying amount to exceed the aggregate recoverable amount of the related CGUs.

At the beginning of the financial year the recoverable amount of 'Leisure goods – retail outlets' was substantially in excess of its carrying amount. Due to current market conditions at the year-end, as discussed in note 4, the recoverable amount exceeds the carrying amount by CU__.

A __ per cent underperformance against forecast sales growth rates for 'Leisure goods – retail outlets' is considered reasonably possible based on recent experience and would lead to an impairment charge of CU__.

A __ per cent underperformance against forecast sales growth rates would reduce the headroom in 'Leisure goods – retail outlets' to nil but would not result in an impairment charge.

	Fair value measurement of the grou		•		

The group's freehold land and buildings are stated at their revalued amounts, being the fair value at the date of revaluation, less any subsequent accumulated depreciation and subsequent accumulated impairment losses. The fair value measurements of the group's freehold land and buildings as at 31 December 2024 and 31 December 2023 were performed by [name of valuers], independent valuers not related to the group. [Name of valuers] are members of the Institute of Valuers of [A Land], and they have appropriate qualifications and recent experience in the fair value measurement of properties in the relevant locations. The valuation conforms to International Valuation Standards and was based on recent market transactions on arm's length terms for similar properties.

The fair value of the freehold land was determined based on the market comparable approach that reflects recent transaction prices for similar properties/other methods [describe].

The fair value of the buildings was determined using the cost approach that reflects the cost to a market participant to construct assets of comparable utility and age, adjusted for obsolescence/other methods [describe]. [Describe the valuation techniques and the inputs used in determining the fair value]

There has been no change to the valuation technique during the year.

International GAAP Holdings Limited Source Details of the group's freehold land and buildings and information about the fair value hierarchy as at the end of the IFRS 13:93(a)reporting period are as follows: (b) Fair value as at Level 2 31/12/2024 Level 3 CU CU CU A manufacturing plant in [A Land] contains: Freehold land Buildings Fair value as at Level 2 Level 3 31/12/2023 CU CU CU A manufacturing plant in [A Land] contains: Freehold land Buildings Commentary: The categorisation of fair value measurements into the different levels of the fair value hierarchy depends on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement. The above categorisations are for illustrative purpose only. It is worth noting the following points: the classification into the 3-level hierarchy is not an accounting policy choice. For land and buildings, given their unique nature, it is extremely rare that the fair value measurement would be identified as a Level 1 measurement. Whether the fair value measurement in its entirety should be classified into Level 2 or Level 3 would depend on the extent to which the inputs and assumptions used in arriving at the fair value are observable. In many situations where valuation techniques (with significant unobservable inputs) are used in estimating the fair value of the real estate properties, the fair value measurement as a whole would be classified as Level 3 • the level within which the fair value measurement is categorised bears no relation to the quality of the valuation. For example, the fact that a real estate property is classified as a Level 3 fair value measurement does not mean that the property valuation is not reliable—it merely indicates that significant unobservable inputs have been used and significant judgement was required in arriving at the fair value. IFRS 13:95 **Commentary:**

Where there had been a transfer between different levels of the fair value hierarchy, the group should disclose the reasons for the transfer and the group's policy for determining when transfers between levels are deemed to have occurred (for example, at the beginning or end of the reporting period or at the date of the event that caused the transfer).

International GAAP Holdings Limited Source Had the group's freehold land and buildings (other than land and buildings classified as held for sale or included in a disposal IAS 16:77(e) group) been measured on a historical cost basis, their carrying amount would have been as follows: As at 31/12/2024 As at 31/12/2023 CU CU Freehold land Buildings The revaluation surplus is disclosed in note 43. The revaluation surplus arises in a subsidiary and cannot be distributed to the parent due to legal restrictions in the country of incorporation. At 31 December 2024, the group had entered into contractual commitments for the acquisition of property, plant and equipment amounting to CU__ million (2023: CU__ million). Impairment losses recognised in the year During the year, as the result of the unexpected poor performance of a manufacturing plant, the group carried out a review of the recoverable amount of that manufacturing plant and the related equipment. The poor performance of the plant can be attributed to [insert description of reasons for poor performance, for example, this could include whether the impairment loss was prompted by external data or changes in the parent company's own estimates]. These assets are used in the group's [name segment] reportable segment. The review led to the recognition of an impairment loss of CU__, which has been recognised in profit or loss. The group also estimated the fair value less costs of disposal of the manufacturing plant and the related equipment, which is based on the recent market prices of assets with similar age and obsolescence. The fair value less costs of disposal is less than the value in use and hence the recoverable amount of the relevant assets has been determined on the basis of their value in use. The manufacturing plant and the related equipment were impaired to their recoverable amount based on value in use of CU__, which is their carrying value at year end. The discount rate used in measuring value in use was __ per cent per annum. No impairment assessment was performed in IAS 36:130(a)-2023 as there was no indication of impairment. (g) Additional impairment losses recognised in respect of plant and machinery in the year amounted to CU_ million. These IAS 36:131

IAS 36:126(a)

losses are attributable to greater than anticipated wear and tear. Those assets have been impaired in full and they belong to the group's [name segment] reportable segment.

The impairment losses have been included in the profit and loss in the [other expenses/cost of sales] line item.

The impairment loss on fixtures and equipment arose in connection with the restructuring following the disposal of [specify/ provide cross-reference].

IAS 16:74(a)

Assets pledged as security

Freehold land and buildings with a carrying amount of CU_ million (2023: CU_ million) have been pledged to secure borrowings of the group (see note 32). The group is not allowed to pledge these assets as security for other borrowings or to sell them to another entity.

International GAAP Holdings Limited

IFRS 13:93(c)

Commentary:

Where there had been a transfer between the different levels of the fair value hierarchy, the group should disclose the reasons for the transfer and the group's policy for determining when transfers between levels are deemed to have occurred (for example, at the beginning or end of the reporting period or at the date of the event that caused the transfer).

The group shall transfer a property to, or from, investment property when, and only when, there is evidence of a change in use. A change in use occurs if property meets, or ceases to meet, the definition of investment property. A change in management's intentions for the use of a property by itself does not constitute evidence of a change in use.

Commentary:

Fair value hierarchy

The categorisation of fair value measurements into the different levels of the fair value hierarchy depends on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement. The above categorisations are for illustrative purposes only. It is worth noting the following points:

- the classification into the 3-level hierarchy is not an accounting policy choice. For land and buildings, given their unique nature, it is extremely rare that the fair value measurement would be identified as a Level 1 measurement. Whether the fair value measurement in its entirety should be classified into Level 2 or Level 3 would depend on the extent to which the inputs and assumptions used in arriving at the fair value are observable. In many situations where valuation techniques (with significant unobservable inputs) are used in estimating the fair value of the real estate properties, the fair value measurement as a whole would be classified as Level 3
- the level within which the fair value measurement is categorised bears no relation to the quality of the valuation. For example, the fact that a real estate property is classified as a Level 3 fair value measurement does not mean that the property valuation is not reliable—it merely indicates that significant unobservable inputs have been used and significant judgement was required in arriving at the fair value.

Fair value disclosures for investment properties measured using the cost model

For investment properties that are measured using the cost model, paragraph 79(e) of IAS 40 Investment Property requires the fair value of the properties to be disclosed in the notes to the financial statements. In that case, the fair value of the properties (for disclosure purpose) should be measured in accordance with IFRS 13 Fair Value Measurement. In addition, IFRS 13:97 requires the following disclosures:

- the level in which fair value measurement is categorised (i.e. Level 1, 2 or 3)
- when the fair value measurement is categorised within Level 2 or Level 3, a description of the valuation technique(s) and the inputs used in the fair value measurement
- the highest and best use of the properties (if different from their current use) and the reasons why the properties are being used in a manner that is different from their highest and best use

Source	International GAAP Holdin	gs Limited		
IFRS 13:93(d) IFRS 13:93(h)(i)		Valuation technique(s)	Significant unobservable input(s)	Sensitivity
	Commercial property units located in [A Land] – [C City]	Income Capitalisation Approach	Capitalisation rate, taking into account the capitalisation of rental income potential, nature of the property, and prevailing market condition, of per cent per cent (2023: per cent per cent).	A slight increase in the capitalisation rate used would result in a significant decrease in fair value, and vice versa.
			Monthly market rent, taking into account the differences in location, and individual factors, such as frontage and size, between the comparables and the property, at an average of CU(2023: CU) per square metre ("sqm") per month.	A significant increase in the market rent used would result in a significant increase in fair value, and vice versa.

Commentary:

In considering the level of disaggregation of the properties for the above disclosure, management of the entity should take into account the nature and characteristics of the properties in order to provide meaningful information to the users of the financial statements regarding the fair value measurement information of the different types of properties. The breakdown above is for illustrative purposes only.

As illustrated above, for fair value measurements categorised within Level 3 of the fair value hierarchy, an entity provides quantitative information about the significant unobservable inputs used in the fair value measurement. An entity is not required to create quantitative information to comply with this disclosure requirement if quantitative unobservable inputs are not developed by the entity when measuring fair value (e.g. when an entity uses prices from prior transactions or third-party pricing information without adjustment). However, when providing this disclosure an entity cannot ignore quantitative unobservable inputs that are significant to the fair value measurement and are reasonably available to the entity.

The group has pledged all of its investment property to secure general banking facilities granted to the group.

IAS 40:75(f)

The property rental income earned by the group from its investment property, all of which is leased out under operating leases, amounted to CU_ million (2023: CU_ million). Direct operating expenses arising on the investment property, all of which generated rental income in the year, amounted to CU_ million (2023: CU_ million).

IAS 40:75(h)

The group has entered into a contract for the maintenance of its investment property for the next five years, which will give rise to an annual charge of CU_ million.

20. Subsidiaries

Commentary:

IFRS Accounting Standards do not require an entity to disclose a list of its subsidiaries in the consolidated financial statements. Nevertheless, local laws or regulations may require an entity to make such a disclosure. The disclosure below is for information only and may have to be modified to comply with the additional local requirements.

IFRS 12:18

During the year, the group disposed of a __ per cent of its interest in [name of subsidiary]. The proceeds on disposal of CU_ million were received in cash. An amount of CU_ million (being the proportion share of the carrying amount of net assets in [name of subsidiary] has been transferred to non-controlling interests (see note 51). The gain on disposal of [name of subsidiary] is disclosed in note 52. No investment was retained in the former subsidiary. The gain on disposal is included in the loss on discontinued operations, which is analysed in note 15.

IFRS 12:14-17

Commentary:

When the group provides financial support to a consolidated structured entity, the nature and risks (including the type and amount of support provided) should be disclosed in the financial statements. Please see paragraph 15 of IFRS 12 Disclosure of Interests in Other Entities for details.

21. Associates

IFRS 12:21(a)

Details of material associates

Details of each of the group's material associates at the end of the reporting period are as follows:

Commentary:

For illustrative purposes, the following associates are assumed to be material to the group.

Name of associate	Principal activity	Place of incorporation and principal place of business	Proportion of ownership inter rights held by the group	est and voting
			31/12/2024	31/12/2023
Associate A Limited (i) & (ii)	[insert Activity X]	[A Land]		
Associate B Limited (iii)	[insert Activity Y]	[B Land]		

IFRS 12:21(b)

All of the above associates are accounted for using the equity method in these consolidated financial statements as set out in the group's accounting policies in note 3.

IFRS 12:21(a) (iv)

(i) Pursuant to a shareholder agreement, the parent company has the right to cast __ per cent of the votes at shareholder meetings of Associate A Limited.

IFRS 12:22(b) IFRS 12:21(b) (iii) IFRS 13:97 (ii) The financial year end date of Associate A Limited is 31 October. This was the reporting date established when that entity was incorporated, and a change of reporting date is not permitted in [A Land]. For the purposes of applying the equity method of accounting, the financial statements of Associate A Limited for the year ended 31 October 2024 have been used, and appropriate adjustments have been made for the effects of significant transactions between that date and 31 December 2024. As at 31 December 2024, the fair value of the group's interest in Associate A Limited, which is listed on the stock exchange of [A Land], was CU_ million (2023: CU_ million) based on the quoted market price available on the stock exchange of [A Land], which is a Level 1 input in terms of IFRS 13.

IFRS 12:9(e)

(iii) Although the group holds less than __ per cent of the equity shares of Associate B Limited, and it has less than __ per cent of the voting power at shareholder meetings, the group exercises significant influence by virtue of its contractual right to appoint two out of seven directors to the board of directors of that entity.

IFRS 7:11B

- Apart from the disposal of __ per cent of Associate C Limited as disclosed in note 21 which resulted in the group's loss of significant influence over the associate, no other shares have been disposed of during the current reporting period.
- (iii) The group has also invested in a portfolio of listed shares which are held for trading.
- (iv) The bills of exchange have maturity dates ranging between __ to __ months from the reporting date and return a variable rate of interest. The weighted average interest rate on these securities is __ per cent per annum (2023: __ per cent per annum). The counterparties have a minimum A credit rating. See below for impairment assessment.

The debentures return interest of __ per cent per annum payable monthly, and mature on [date]. The counterparties have a minimum BBB- credit rating. See below for impairment assessment.

The group holds listed redeemable notes returning __ per cent per annum. The notes are redeemable at par value on [date]. The notes are held with a single counterparty with an AA credit rating. The group holds no collateral over these notes. See below for impairment assessment.

The group has provided its associates with short-term loans at rates comparable to the average commercial rate of interest. Further information about these loans is contained in note 64. See below for impairment assessment.

The group has provided a joint venture, JV A Limited, with a long-term loan which forms part of the net investment in the joint venture. The loan is repayable in 2070 and interest of __ per cent is receivable annually. The group does not apply the equity method of accounting to this instrument because it does not entitle the group to the share of net assets of the joint venture. As the loan settlement is neither planned nor likely to occur in the foreseeable future, for the purpose of accounting for losses of JV A Limited, the loan would form part of the group's net investment. Therefore, any losses recognised using the equity method in excess of the group's investment in ordinary shares of JV A Limited will be applied to the long-term loan. The loan is held by the group within a business model whose objective is to collect contractual cash flows which are solely payments of principal and interest on the principal amount outstanding. Hence the loan to the joint venture is classified at amortised cost. See below for impairment assessment.

The bills of exchange, debentures, redeemable notes, and short-term loan to associates and loans to other parties are held by the group within a business model whose objective is to collect their contractual cash flows which are solely payments of principal and interest on the principal amount outstanding. Hence all of those financial assets are classified as at amortised cost.

The fair value of the investments carried at amortised cost is disclosed in note 62(a).

Impairment of financial assets

IFRS 7:35F(a)(i)
IFRS 7:35G

For the purposes of impairment assessment, the corporate bonds, investments in redeemable notes, bills of exchange and debentures are considered to have low credit risk as the counterparties to these investments have a minimum BBB- credit rating. Accordingly, for the purpose of impairment assessment for these financial assets, the loss allowance is measured at an amount equal to 12-month ECL. As for the loans to related and other parties lifetime ECL was provided for them upon initial application of IFRS 9 until these financial assets are derecognised as it was determined on initial application of IFRS 9 that it would require undue cost and effort to determine whether their credit risk has increased significantly since initial recognition to the date of initial application of IFRS 9. For any new loans to related or third parties, which are not purchased or originated credit-impaired financial assets, the impairment loss is recognised as 12-month ECL on initial recognition of such instruments and subsequently the group assesses whether there was a significant increase in credit risk.

In determining the expected credit losses for these assets, the directors of the parent company have taken into account the historical default experience, the financial position of the counterparties, as well as the future prospects of the industries in which the issuers of the redeemable notes, bills of exchange and debentures operate obtained from economic expert reports, financial analyst reports and considering various external sources of actual and forecast economic information, as appropriate, in estimating the probability of default of each of these financial assets occurring within their respective loss assessment time horizon, as well as the loss upon default in each case.

IFRS 7:35F(a)
IFRS 7:35G(c)

There has been no change in the estimation techniques or significant assumptions made during the current reporting period in assessing the loss allowance for these financial assets.

IFRS 7:35M

Note 62(d)(ii) details the gross carrying amount, loss allowance as well as the measurement basis of expected credit losses for each of these financial assets by credit risk rating grades.

International GAAP Holdings Limited Source The following table shows the movement in expected credit losses that has been recognised for the respective financial IFRS 7:35H assets: 12-month ECL Lifetime ECL—not credit impaired Bills of Loan to joint Redeemable Loans to Loans to other entities exchange venture Debentures notes associates Total CU CU CU CU CU CU CU **Balance** as at 1 January 2023 Increase in loss allowance arising from new financial assets recognised in the year Decrease in loss allowance from derecognition of financial assets in the year **Balance** as at **31 December 2023** Increase in loss allowance arising from new financial assets recognised in the year Decrease in loss allowance from derecognition of financial assets in the year **Balance** as at 31 December 2024 The changes in the loss allowance were caused predominantly by early repayment of the loan by Associate A Limited. The IFRS 7:35B(b) IFRS 7:35H gross carrying amount of the loan was CU__ and associated loss allowance was CU__. There was no significant increase in the credit risk since inception in respect of new loans to associates, the joint venture and other entities. The loss allowance for the corporate bonds measured at FVTOCI is recognised in other comprehensive income. The movement in loss allowance is disclosed in note 43. 25. Inventories 31/12/2024 31/12/2023 CU CU Raw materials IAS 2:36(b) Work-in-progress Finished goods The cost of inventories recognised as an expense during the year in respect of continuing operations was CU__ million (2023: IAS 2:36(d) CU__ million). The cost of inventories recognised as an expense includes CU_ million (2023: CU_ million) in respect of write-downs of IAS 2:36(e)-(g) inventory to net realisable value, and has been reduced by CU_ million (2023: CU_ million) in respect of the reversal of such \bigoplus write-downs. Previous write-downs have been reversed as a result of increased sales prices in certain markets. Inventories of CU_ million (2023: CU_ million) are expected to be recovered after more than 12 months. IAS 1:61

Inventories with a carrying amount of CU_ million (2023: CU_ million) have been pledged as security for certain of the

	Commentary:
	IFRS 16:47(a) states that where a lessee does not present right-of-use assets separately in the statement of financial position, the lessee shall:
	• include right-of-use assets within the same line item as that within which the corresponding underlying assets would be presented if they were owned
	• disclose which line items in the statement of financial position include those right-of-use assets.
IFRS 16:59(a)	The group leases several assets including buildings, plant and IT equipment. The average lease term is years (2023: years)
	The group has options to purchase certain manufacturing equipment for a nominal amount at the end of the lease term. The group's obligations are secured by the lessors' title to the leased assets for such leases.
IFRS 16:53(h)	Approximately one fifth of the leases for buildings and equipment expired in the current financial year. The expired contracts were replaced by new leases for identical underlying assets. This resulted in additions to right-of-use assets of CU million in 2024 (2023: CU million).
	The maturity analysis of lease liabilities is presented in note 36.
	31/12/2024 31/12/2023

IFRS 16:60	For short-term leases (defined as leases with a lease term of 12 months or less) and leases of low value assets (such as tablets and personal computers, small items of office furniture and telephones), the group recognises the lease payments as an operating expense [on a straight-line basis over the term of the lease/ describe the systematic basis use if this is more representative of the time pattern in which economic benefits from the leased assets are consumed].
IFRS 16:55	At 31 December 2024, the group is committed to CU_ million (2023: CU_ million) for short-term leases.
IFRS 16:59(b) IFRS 16:B49	Some of the property leases in which the group is the lessee contain variable lease payment terms that are linked to sales generated from the leased stores. Variable payment terms are used to link rental payments to store cash flows and reduce fixed cost. The breakdown of lease payments for these stores is as follows:
	31/12/2024 31/12/2023
	CU CU
	Fixed payments
	Variable payments
	Total payments
IFRS 16:59(b) (i) IFRS 16:B49	Overall, the variable payments constitute up to per cent of the group's entire lease payments. The group expects this ratio to remain constant in future years. The variable payments depend on sales and consequently on the overall economic development over the next few years. Taking into account the development of sales expected over the next years, variable rept expenses are expected to continue to present a similar proportion of store sales in future years.

rent expenses are expected to continue to present a similar proportion of store sales in future years.

Source International GAAP Holdings Limited

IFRS 16:53(g)

The total cash outflow for leases amount to CU_ million (2023: CU_ million)

On [date] 2024, Subsidiary A Limited entered into a 10-year lease to rent property, which had not commenced by the year-end and as a result, a lease liability and right-of-use asset has not been recognised at 31 December 2024. The aggregate future cash outflows to which the group is exposed in respect of this contract is fixed payments of CU__ per year, for the next 10 years.

There are no extension or termination options on the lease.

Commentary:

In addition to the disclosures required in IFRS 16:53-58, a lessee is required to disclose additional qualitative and quantitative information about its leasing activities necessary to meet the disclosure objective in IFRS 16:51. This additional information may include, but is not limited to, information that helps users of financial statements to assess:

- the nature of the lessee's leasing activities
- future cash outflows to which the lessee is potentially exposed that are not reflected in the measurement of lease liabilities. This includes exposure arising from:
- variable lease payments
- extension options and termination options
- residual value guarantees
- leases not yet commenced to which the lessee is committed
- · restrictions or covenants imposed by leases
- sale and leaseback transactions.

International GAAP Holdings Limited Source As at 1 January 2023, trade receivables from contracts with customers amounted to CU__(net of loss allowance of CU__). IFRS 15:116(a) **Trade receivables** The average credit period on sales of goods is 60 days. No interest is charged on outstanding trade receivables. The group always measures the loss allowance for trade receivables at an amount equal to lifetime ECL. The expected IFRS 7:35G credit losses on trade receivables are estimated using a provision matrix by reference to past default experience of the debtor and an analysis of the debtor's current financial position, adjusted for factors that are specific to the debtors, general economic conditions of the industry in which the debtors operate and an assessment of both the current as well as the forecast direction of conditions at the reporting date. The group has recognised a loss allowance of 100 per cent against all receivables over 120 days past due because historical experience has indicated that these receivables are generally not recoverable. The group has engaged a third-party supplier to provide relevant economic data for determining the factors that are IFRS 7:35G(c) specific to the debtors, the general economic conditions of the industry in which the debtors operate and the forecast direction of conditions at the reporting date. The group has significantly increased the expected loss rates for trade receivables from the prior year based on its judgement of the impact of current economic conditions and the forecast direction of travel at the reporting date. There has been no change in the estimation techniques during the current reporting period. The group writes off a trade receivable when there is information indicating that the debtor is in severe financial difficulty IFRS 7:35F(e) and there is no realistic prospect of recovery, e.g. when the debtor has been placed under liquidation or has entered into IFRS 7:35L bankruptcy proceedings, or when the trade receivables are over two years past due, whichever occurs earlier. The following table details the risk profile of trade receivables based on the group's provision matrix. As the group's IFRS 7:35M IFRS 7:35N historical credit loss experience does not show significantly different loss patterns for different customer segments, IFRS 9:B5.5.35 the provision for loss allowance based on past due status is not further distinguished between the group's different customer segments. International GAAP Holdings Limited Source Commentary: IFRS 7:35H requires an entity to explain the reasons for the changes in the loss allowance during the period. In addition to the reconciliation from the opening balance to the closing balance of the loss allowance, it may be necessary to provide a narrative explanation of the changes. This narrative explanation may include an analysis of the reasons for changes in the loss allowance during the period, including: • the portfolio composition • the volume of financial instruments purchased or originated • the severity of the expected credit losses. 32. IFRS 7:7	The other principal features of the group	's borrowings are as follo	ws:					
	(i) Bank overdrafts are repayable on der charge over certain debentures held value of these debentures is CU_ mil approximately _ per cent (2023: _ per	by the group dated [<i>date</i>] lion (2023: CU million).	. In line with the mini The average effective	mum required security, t e interest rate on bank ov	he carrying verdrafts is			
	(ii) The group has two principal bank loan	ns:						
	(a) A loan of CU_ million (2023: CU_ million). The loan was taken out on [date]. Repayments commenced on [date] and will continue until [date]. The loan is secured by a floating charge over certain of the group's trade receivables dated [date], whose carrying value is CU_ million (2023: CU_ million). The group is required to maintain trade receivables that are not past due with carrying value of CU_ million as security for the loan (see note 31). Originally, the loan carried interest rate at _ per cent above 3-month LIBOR. However, in the first quarter of 2023, the group transitioned its CU_ million bank borrowings to SOFR. The CU_ million bank borrowings that transitioned to SOFR had an additional fixed spread added of [x]bps. No other terms were amended as part of the transition. The group accounted for the change to SOFR using the practical expedient in IFRS 9, which allows the group to change the basis							

for determining the contractual cash flows prospectively by revising the effective interest rate. See note 62.

(b) An unsecured loan of CU__ million (2023: CU__ million). This loan was advanced on [date] and is due for repayment in full on [date]. The bank loan carries fixed interest rate at __ per cent (2023: __ per cent) per annum. The group hedges a portion of the loan for interest rate risk using an interest rate swap exchanging fixed rate interest for variable rate interest. The outstanding balance is adjusted for fair value movements in the hedged risk, being movements in the 6-month EURIBOR rate. The cumulative fair value adjustment to the loan was CU_ million (2023: CU_ million).

IFRS 7:10(a) IFRS 7:10(b)

- iii) Bills of exchange with a variable interest rate were issued on [date]. The current weighted average effective interest rate on the bills is __ per cent (2023: __ per cent) per annum.
- (iv) Amounts repayable to related parties of the group carry interest of __ per cent to __ per cent (2023: __ per cent to __ per cent) per annum charged on the outstanding loan balances
- (v) Redeemable cumulative preference shares of CU__ million were issued on [date] at an issue price of CU__ per share. The shares carry __ per cent non-discretionary dividends and are mandatorily redeemable on [date] at CU__ per share. The preference shares do not carry any equity component and are classified as financial liabilities in their entirety. At the same date when the preference shares were issued, the group entered into a pay-floating, receive-fixed interest rate swap to reduce the fair value risk of changing interest rates. The swap's notional is CU__ million and matches the principal of the preference shares. The swap matures on [date]. To mitigate the accounting mismatch arising on measuring the liability at amortised cost and measuring the derivative at FVTPL, the group designated the preference shares as at FVTPL. The changes in the fair value of the preference shares due to the changes in the credit risk do not create or enlarge the accounting mismatch and, therefore, they are recognised in other comprehensive income and accumulated in the financial liabilities at FVTPL credit risk reserve (see note 45). The cumulative amount change in fair value due to credit risk was CU__ (2023: CU__). The difference between the carrying amount (i.e. the fair value) of the preference shares and the contractual amount that will be required to pay at maturity is CU__ (2023: CU__). The valuation methodology and inputs used are disclosed in note 62(a)(i).
- (vi) Perpetual notes of CU_ million carrying interest of _ per cent were issued on [date] at principal value. Issue costs of CU_ million were incurred
- (vii) On [date], the group received an interest-free loan of CU_ million from the government of [B Land] to finance staff training costs. The loan is repayable in full at the end of a two-year period. Using prevailing market interest rates for an equivalent loan of _ per cent, the fair value of the loan is estimated at CU_ million. The difference of CU_ between the gross proceeds and the fair value of the loan is the benefit derived from the interest-free loan and is recognised as deferred income (see note 59). Interest charges will be recognised on this loan in 2024 (CU_) and 2025 (CU_).

The weighted average interest rates paid during the year were as follows:

31/12/2024	31/12/2023
 %	%

Bank overdrafts

Bills of exchange

Loans from related parties

Redeemable cumulative preference shares

Perpetual notes

Bank loans

IFRS 7:18 Breach of a loan agreement

During the current year, the group was late in paying interest for the first quarter on one of its loans with a carrying amount of CU_ million. The delay arose because of a temporary lack of funds on the date interest was payable due to a technical problem on settlement. The interest payment outstanding of CU_ million was paid in full on the following day, including the additional interest and penalty. The lender did not request accelerated repayment of the loan and the terms of the loan were not changed. Management has reviewed the group's settlement procedures to ensure that such circumstances do not recur.

Covenants

The secured bank loan is subject to a financial covenant which is tested semi-annually on 30 June and 31 December each year. The covenant measures the group's gearing ratio as calculated in note 62(f). The group has complied with this covenant in 2024 and 2023.

Commentary:

If an entity has classified a liability as non-current but the right to defer settlement of that liability is subject to the entity complying with covenants within 12 months after the reporting period, it should disclose information which enables users of financial statements to understand the risk of the liabilities becoming repayable within 12 months after the reporting period, including: [IAS 1:76ZA]

- information about the covenants (including the nature of the covenants and when the entity is required to comply with them) and the carrying amount of related liabilities
- facts and circumstances, if any, which indicate that the entity may have difficulties complying with the covenants (e.g. if the entity would be in breach of the covenant if it had been assessed at the end of the reporting period).

Perpetual notes issued by the group do not contain financial covenants, however the group is required to provide notification to the note holders following a change of control. Change of control may, at the discretion of the note holders, trigger the establishment of additional guarantees or the early repayment of outstanding amounts.

Other borrowings issued by the group do not contain any covenants.

IFRS 7:7 33. Convertible loan notes

The convertible loan notes were issued on [date] at an issue price of CU__ per note. The notes are convertible into ordinary shares of the parent company at any time between the date of issue of the notes and their settlement date. On issue, the loan notes were convertible at __ shares per CU__ loan note. The conversion price is at a __ per cent premium to the share price of the ordinary shares at the date the convertible loan notes were issued.

If the notes have not been converted, they will be redeemed on [date] at par. Interest of __ per cent will be paid annually up until that settlement date.

IAS 32:28

The net proceeds received from the issue of the convertible loan notes have been split between the financial liability element and an equity component, representing the fair value of the embedded option to convert the financial liability into equity of the parent company, as follows:

	CU
Proceeds of issue of convertible loan notes	
Transaction costs	
Net proceeds from issue of convertible loan notes	
Equity component	
Transaction costs relating to equity component	
Amount classified as equity	
Liability component at date of issue (net of transaction costs)	
Interest charged (using effective interest rate)	
Interest paid	()
Carrying amount of liability component at 31 December 2024	

The equity component of CU_ million has been credited to the option premium on convertible notes reserve (see note 44).

The interest expensed for the year is calculated by applying an effective interest rate of __ per cent to the liability component for the __ months period since the loan notes were issued. The liability component is measured at amortised cost. The difference between the carrying amount of the liability component at the date of issue and the amount reported in the reporting at 31 December 2024 represents the effective interest rate less interest paid to that date.

International GAAP Holdings Limited

The derivative asset and liability with Counterparty A meet the offsetting criteria in IAS 32 *Financial Instruments: Presentation*. Consequently, the gross derivative liability is offset against the gross derivative asset, resulting in the presentation of a net derivative asset of CU__ million in the group's statement of financial position.

Cash collateral has also been received from Counterparty A for a portion of the net derivative asset (CU_ million). The cash collateral of CU_ million does not meet the offsetting criteria in IAS 32, but it can be offset against the net amount of the derivative asset and derivative liability in the case of default and insolvency or bankruptcy, in accordance with associated collateral arrangements.

The derivative asset and liability with Counterparty B do not meet the offsetting criteria in IAS 32. Consequently, the gross amount of the derivative asset (CU_ million) and gross amount of derivative liability (CU_ million) are presented separately in the group's statement of financial position.

The group did not enter into any other enforceable netting arrangements than discussed above.

Further details of derivative financial instruments are provided in note 62(c).

Trade and other payables 31/12/2024 31/12/2023 CUCU Trade payables Of which amounts that are part of supplier finance arrangements (see note 54) Other taxation and social security Other payables Accruals Trade payables and accruals principally comprise amounts outstanding for trade purchases and ongoing costs. The average **IFRS 7:7** credit period taken for trade purchases is days (excluding supplier finance arrangements) and days (including supplier finance arrangements). For most suppliers no interest is charged on the trade payables for the first __ days from the date of the invoice. Thereafter, interest is charged on the outstanding balances at various interest rates. The group has financial risk management policies in place to ensure that all payables are paid within the pre-agreed credit terms. The directors consider that the carrying amount of trade payables approximates to their fair value. IFRS 7:29 (a) 38. Other financial liabilities 31/12/2024 31/12/2023 CU CU Contingent consideration Financial guarantee contract The group's major supplier, Entity A, borrowed CU_ million from Bank Z on 30 June 2023. The bank loan has a maturity of 3 years. The group guaranteed this bank loan and in the event of default of Entity A will have to pay Bank Z. The maximum group exposure is CU__ million and the given guarantee covers the time until maturity of underlying bank loan. The group received a premium of CU__. The carrying amount of the guarantee is established as the higher of: amount of loss allowance calculated in accordance with IFRS 9 premium received less cumulative amortisation of the premium to date (according to group's policy amortisation is calculated on straight-line basis until maturity of the contract). At the end of the reporting period, the directors of the parent company have assessed the past due status of the debts IFRS 7:35G under guarantee, the financial position of the debtors as well as the economic outlook of the industries in which the debtors (a)-(b)operate, and concluded that there has not been a significant increase in the credit risk since initial recognition of the financial guarantee contract. Accordingly, the loss allowance for financial guarantee contract issued by the group is measured at an amount equal to 12-month ECL. Note 62(d)(ii) contains the credit risk rating grades for this financial guarantee contract.

There has been no change in the estimation techniques or significant assumptions made during the current reporting period

In both years the amount of loss allowance is lower than the premium less cumulative amortisation, therefore no loss

in assessing the loss allowance for these financial assets.

allowance was recognised in profit or loss for the financial guarantee contract.

IFRS 7:35G(c)

Source **International GAAP Holdings Limited** 39. Provisions 31/12/2024 31/12/2023 CU Warranty provision Restructuring provision Restoration provision Other Current Non-current Warranty Restructuring Restoration provision provision Other provision Total CU CU CU CU CU At 1 January 2024 Additional provision in the year IAS 37:84(a) Utilisation of provision IAS 37:84(b) On acquisition of subsidiary IAS 37:84(c) Unwinding of discount IAS 37:84(e) Adjustment for change in discount rate IAS 37:84(e) Exchange difference At 31 December 2024 IAS 37:84(a) The warranty provision represents management's best estimate of the group's liability under 12-month warranties granted IAS 37:85 on electrical products, based on past experience and industry averages for defective products. (a)-(b)The restructuring provision relates to redundancy costs incurred on the disposal of [name of subsidiary] (see note 52). As IAS 37:85 at 31 December 2024, approximately 50 per cent of the affected employees had left the group's employment, with the (a)-(b)remainder departing in January 2025. The restoration provision has been created upon the enactment of new environmental legislation in [A Land] on IAS 37:85 15 December 2024 which requires companies in [A Land] to clean up contaminated land by 30 June 2025 and bear the (a)-(b) associated costs thereof. Management is in the process of clarifying certain aspects of the legislation and therefore the final assessment of costs that the parent company will need to incur may change materially based on the outcome of this process. Based on the current interpretation of the legislation, the directors have estimated a liability of CU__ million. In estimating the liability, the directors have made assumptions regarding the following: local site volume of contamination, proximity to approved landfill sites, technology available to decontaminate and costs required to dispose of specialised raw materials. [Describe other provisions]

Commentary:

Notes 40 to 51 below set out detailed descriptions and reconciliations for each class of share capital and each component of equity, as required by IAS 1:79, IAS 1:106 and IAS 1:106A. IAS 1 permits some flexibility regarding the level of detail presented in the statement of changes in equity and these supporting notes. IAS 1 allows an analysis of other comprehensive income by item for each component of equity to be presented either in the statement of changes in equity or in the notes. For the purposes of the preparation of these illustrative financial statements, the group has elected to present the analysis of other comprehensive income in the notes.

IAS 1 also allows that some of the details regarding items of other comprehensive income (income tax and reclassification adjustments) may be disclosed in the notes rather than in the statement of profit or loss and other comprehensive income. Entities will determine the most appropriate presentation for their circumstances – electing to present much of the detail in the notes (as we have done in these illustrative financial statements) ensures that the primary financial statements are not cluttered by unnecessary detail, but it does result in very detailed supporting notes.

Whichever presentation is selected, entities will need to ensure that the following requirements are met:

- detailed reconciliations are required for each class of share capital (in the statement of changes in equity or in the notes)
- detailed reconciliations are required for each component of equity separately disclosing the impact on each such component of (i) profit or loss, (ii) each item of other comprehensive income, and (iii) transactions with owners in their capacity as owners (in the statement of changes in equity or in the notes)
- the amount of income tax relating to each item of other comprehensive income should be disclosed (in the statement of profit or loss and other comprehensive income or in the notes)
- reclassification adjustments should be presented separately from the related item of other comprehensive income (in the statement

(2)		

International GAAP Holdings Limited Source The initial accounting for the acquisition of [Acquisition B Limited] has only been provisionally determined at the end of the IFRS 3:B67(a) reporting period. For tax purposes, the tax values of [Acquisition B Limited]'s assets are required to be reset based on market values of the assets. At the date of finalisation of these consolidated financial statements, the necessary market valuations and other calculations had not been finalised and they have therefore only been provisionally determined based on the directors' best estimate of the likely tax values. The fair value of the financial assets includes receivables [describe type of receivables] with a fair value of CU million and IFRS 3:B64(h) a gross contractual value of CU_ million. The best estimate at acquisition date of the contractual cash flows not to be collected are CU__ million. The goodwill of CU_ million arising from the acquisition consists of [describe factors that make up goodwill recognised]. None of IFRS 3:B64(e) the goodwill is expected to be deductible for income tax purposes. (k) The fair value of the __ ordinary shares issued as part of the consideration paid for [Acquisition B Limited] (CU__ million) was determined on the basis of [describe method for determining fair value]. The non-controlling interest (20 per cent ownership interest in [Acquisition B Limited]) recognised at the acquisition date was IFRS 3:B64(o) measured by reference to the fair value of the non-controlling interest and amounted to CU__. This fair value was estimated by applying an income approach. The following were the key model inputs used in determining the fair value: • assumed discount rate of __ per cent assumed long-term sustainable growth rates of __ per cent to __ per cent assumed adjustments because of the lack of control or lack of marketability that market participants would consider when estimating the fair value of the non-controlling interests in [Acquisition B Limited]. All outstanding share options granted by [Acquisition B Limited] to its employees had vested by the acquisition date. These share options were measured in accordance with IFRS 2 at their market-based measure of CU_ and were included in the non-controlling interest in [Acquisition B Limited]. Methods and significant assumptions used in determining the marketbased measure at the acquisition date are set out in note 57. Acquisition-related costs (included in administrative expenses) amount to CU_ million. IFRS 3:B64(m) [Name of entity acquired] contributed CU_ million revenue and CU_ million to the group's profit for the period between the IFRS 3:B64(q) date of acquisition and the reporting date. If the acquisition of [name of entity acquired] had been completed on the first day of the financial year, group revenues for the IFRS 3:B64(q) year would have been CU_ million and group profit would have been CU_ million. Commentary: The disclosures illustrated should be given separately for each business combination except that certain disclosures may be disclosed IFRS 3:B65 in aggregate for business combinations that are individually immaterial. The standard also imposes identical disclosure requirements for business combinations that are effected after the reporting date but IFRS 3:B66 before the financial statements are authorised for issue.

57. Share-based payments

Equity-settled share option plan

IFRS 2:44 IFRS 2:45(a)

The parent company has a share option plan for all employees of the group. In accordance with the terms of the plan, as approved by shareholders at a previous annual general meeting, employees with more than __ years' service with the group may be granted options to purchase ordinary shares.

Each employee share option converts into one ordinary share of the parent company on exercise. No amounts are paid or payable by the recipient on receipt of the option. The options carry neither rights to dividends nor voting rights. Options may be exercised at any time from the date of vesting to the date of their expiry.

The number of options granted is calculated in accordance with the performance-based formula approved by shareholders at the previous annual general meeting and is subject to approval by the remuneration committee. The formula rewards employees to the extent of the group's and the individual's achievement judged against both qualitative and quantitative criteria from the following financial and customer service measures:

- · improvement in share price
- improvement in net profit
- improvement in return to shareholders
- reduction in warranty claims
- results of client satisfaction surveys
- reduction in rate of staff turnover.

Options are exercisable at a price equal to the average quoted market price of the parent company's shares on the date of grant. The vesting period is three years. If the options remain unexercised after a period of five years from the date of grant the options expire. Options are forfeited if the employee leaves the group before the options vest.

IFRS 2:45(b)

Details of the share options outstanding during the year are as follows:

		31/12/2024		31/12/2023

IFRS 2:45(d)

No share options were granted or exercised after the group obtained control over [Acquisition B Limited]. The share options outstanding at 31 December 2024 had an exercise price of CU__ and a weighted average remaining contractual life of __ days.

Other share-based payment plans

The employee share purchase plans are open to almost all employees and provide for a purchase price equal to the daily average market price on the date of grant, less __ per cent. The shares can be purchased during a two-week period each year. The shares so purchased are generally placed in the employee share savings plan for a five-year period. Pursuant to these plans, the group issued __ ordinary shares in 2024, at weighted average share prices of __. The discount of CU_ million will be expensed over the vesting period of __ years.

58. Retirement benefit plans Defined contribution plans

The group operates defined contribution retirement benefit plans for all qualifying employees of its construction and leasing divisions in [*A Land*]. The assets of the plans are held separately from those of the group in funds under the control of trustees.

IAS 19:43

The employees of the group's subsidiary in [*B Land*] are members of a state-managed retirement benefit plan operated by the government of [*B Land*]. The subsidiary is required to contribute a specified percentage of payroll costs to the retirement benefit plan to fund the benefits. The only obligation of the group with respect to the retirement benefit plan is to make the specified contributions.

IAS 19:53

The total expense recognised in profit or loss of CU_ million (2023: CU_ million) represents contributions payable to these plans by the group at rates specified in the rules of the plans. As at 31 December 2024, contributions of CU_ million (2023: CU_ million) due in respect of the current reporting period had not been paid over to the plans.

Defined benefit plans

IAS 19:139(a)

The group sponsors defined benefit plans for qualifying employees of its subsidiaries in [*D Land*] and previously for the employees of [*name of entity*]. The defined benefit plans are administered by a separate fund that is legally separated from the parent company. The trustees of the pension fund are required by law to act in the interest of the fund and of all relevant stakeholders in the plan. The trustees of the pension fund are responsible for the investment policy with regard to the assets of the fund.

Under the plans, the employees are entitled to post-retirement yearly instalments amounting to __ per cent of final salary on attainment of a retirement age of __. The pensionable salary is limited to CU__. The pensionable salary is the difference between the current salary of the employee and the state retirement benefit. In addition, the service period is limited to __ years resulting in a maximum yearly entitlement (life-long annuity) of __ per cent of final salary.

The defined benefit plans require contributions from employees. Contributions are in the following two forms; one is based on the number of years of service and the other one is based on a fixed percentage of salary of the employees. Employees can also make discretionary contributions to the plans.

IAS 19:139(b)

The plans in [D Land] typically expose the parent company to actuarial risks such as: investment risk, interest rate risk, longevity risk and salary risk. The risk relating to benefits to be paid to the dependents of plan members is re-insured by an external insurance entity.

Investment risk	The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to high quality corporate bond yields; if the return on plan asset is below this rate, it will create a plan deficit. Currently the plan has a relatively balanced investment in equity securities, debt instruments and real estate. Due to the long-term nature of the plan liabilities, the trustees of the pension fund consider it appropriate that a reasonable portion of the plan assets should be invested in equity securities and in real estate to leverage the return generated by the fund.
Interest risk	A decrease in the bond interest rate will increase the plan liability but this will be partially offset by an increase in the return on the plan's debt investments.
Longevity risk	The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after their employment. An increase in the life expectancy of the plan participants will increase the plan's liability.
Salary risk	The present value of the defined benefit plan liability is calculated by reference to the future salaries of plan participants. As such, an increase in the salary of the plan participants will increase the plan's liability.

International GAAP Holdings Limited Source No other post-retirement benefits are provided to these employees. The most recent actuarial valuations of the plan assets and the present value of the defined benefit liability were carried out at 31 December 2024 by [name], Fellow of the Institute of Actuaries. The present value of the defined benefit liability, and the related current service cost and past service cost, were measured using the projected unit credit method. The principal assumptions used for the purposes of the actuarial valuations were as follows: IAS 19:144 Valuation at 31/12/2023 31/12/2024 Key assumptions used: Discount rate(s) __% __% Expected rate(s) of salary increase % % Average longevity at retirement age for current pensioners* Male __ years __ years Female __ years __ years Average longevity at retirement age for current employees (future pensioners)* Male __ years __ years Female __ years __ years Others [describe] *Based on [D Land]'s standard mortality table with modifications to reflect expected changes in mortality/others [describe]. Amounts recognised in profit or loss in respect of these defined benefit plans are as follows: IAS 19:135 IAS 19:120 31/12/2024 31/12/2023 CU CU Service cost: Current service cost Past service cost and (gain)/loss from settlements Net interest expense Components of defined benefit costs recognised in profit or loss Of the expense (service cost) for the year, CU_ million (2023: CU_ million) has been included in profit or loss as cost of sales and CU_ million (2023: CU_ million) has been included in administrative expenses. The net interest expense has been included within finance costs (see note 11). The remeasurement of the net defined benefit liability is included in other

comprehensive income.

Others [describe]						

Derivatives are classified as Level 2 instruments and property as Level 3 instruments. It is the policy of the fund to use interest rate swaps to hedge its exposure to interest rate risk. It is the policy of the fund to cover __ per cent of the exposure to interest rate risk of the defined benefit obligation by the use of debt instruments in combination with interest rate swaps. This policy has been realised during the reporting and preceding period. Foreign currency exposures are fully hedged by the use of the forward foreign exchange contracts.

IAS 19:143

The plan assets include ordinary shares of International GAAP Holdings Limited with a fair value of CU_ million (2023: CU_ million) and property occupied by a subsidiary of International GAAP Holdings Limited with a fair value of CU_ million (2023: CU_ million).

IAS 19:145 (a)-(b)

Significant actuarial assumptions for the determination of the defined benefit obligation are discount rate, expected salary increase and mortality. The sensitivity analyses below have been determined based on reasonably possible changes of the respective assumptions occurring at the end of the reporting period, while holding all other assumptions constant.

If the discount rate is 100 basis points higher (lower), the defined benefit obligation would decrease (increase) by CU_ million (2023: CU_ million).

If the expected salary growth increases (decreases) by 1 per cent, the defined benefit obligation would increase (decrease) by CU__ million (2023: CU_ million).

If the life expectancy increases (decreases) by one year for both men and women, the defined benefit obligation would increase (decrease) by CU_ million (2023: CU_ million).

The sensitivity analysis presented above may not be representative of the actual change in the defined benefit obligation as it is unlikely that the changes in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

IAS 19:145(c)

In presenting the above sensitivity analysis, the present value of the defined benefit obligation has been calculated using the projected unit credit method at the end of the reporting period, which is the same as that applied in calculating the defined benefit obligation liability recognised in the statement of financial position.

There was no change in the methods and assumptions used in preparing the sensitivity analysis from prior years.

IAS 19:146

Each year an asset-liability matching (ALM) study is performed in which the consequences of the strategic investment policies are analysed in terms of risk-and-return profiles. Investment and contribution policies are integrated within this study.

The main strategic choices that are formulated in the actuarial and technical policy document of the fund are:

- asset mix based on __ per cent equity instruments, __ per cent debt instruments and __ per cent investment property
- interest rate sensitivity caused by the duration of the defined benefit obligation should be reduced by __ per cent using debt instruments in combination with interest rate swaps
- maintaining an equity buffer that gives a __ per cent assurance that assets are sufficient within the next 12 months.

There has been no change in the processes used by the group to manage its risks from prior periods.

IAS 19:147

The group's subsidiaries should fund the cost of the entitlements expected to be earned on a yearly basis. Employees pay a fixed __ per cent of pensionable salary. The residual contribution (including back service payments) is paid by the entities of the group. The funding requirements are based on a local actuarial measurement framework. In this framework the discount rate is set on a risk free rate. Furthermore, premiums are determined on a current salary base. Additional liabilities stemming from past service due to salary increases (back-service liabilities) should be paid immediately to the plan. Apart from paying the costs of the entitlements the group's subsidiaries are not liable to pay additional contributions in case the plan does not hold sufficient assets. In that case the plan should take other measures to restore its solvency such as a reduction of the entitlements of the plan members.

The average duration of the benefit obligation at the end of the reporting period is __ years (2023: __ years). This number can be subdivided into the duration related to:

- active members: __ years (2023: __ years)
- deferred members: __years (2023: __years)
- retired members: __ years (2023: __ years).

The group expects to make a contribution of CU_ million (2023: CU_ million) to the defined benefit plans during the next financial year. The group is committed to paying into the plan for [X] future years, CU_ per annum in line with the agreed Schedule of Contributions.

IFRS 7:6-8 IFRS 7:25

IFRS 7:29(a) IFRS 13:97

IFRS 13:93(c)

The refund liability relates to customers' right to return products within 30 days of purchase. At the point of sale, a refund liability and a corresponding adjustment to revenue is recognised for those products expected to be returned. The group uses its accumulated historical experience to estimate the number of returns on a portfolio level using the expected value method.

62. Financial Instruments

Commentary:

The following are examples of the types of disclosures that might be required in this area. The matters disclosed will be dictated by the circumstances of the individual entity, by the significance of judgements and estimates made to the results and financial position, and the information provided to key management personnel.

(a) Classes and categories of financial instruments and their fair values

The following table combines information about:

- classes of financial instruments based on their nature and characteristics
- the carrying amounts of financial instruments
- fair values of financial instruments (except financial instruments when carrying amount approximates their fair value)
- fair value hierarchy levels of financial assets and financial liabilities for which fair value was disclosed.

Fair value hierarchy levels 1 to 3 are based on the degree to which the fair value is observable:

- Level 1 fair value measurements are those derived from quoted prices (unadjusted) in active markets for identical assets or liabilities
- Level 2 fair value measurements are those derived from inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices)
- Level 3 fair value measurements are those derived from valuation techniques that include inputs for the asset or liability that are not based on observable market data (unobservable inputs).

IFRS 13:91

(a)(i) Fair value of the group's financial assets and financial liabilities that are measured at fair value on a recurring basis

Some of the group's financial assets and financial liabilities are measured at fair value at the end of each reporting period. The following table gives information about how the fair values of these financial assets and financial liabilities are determined (in particular, the valuation technique(s) and inputs used).

IFRS 13:93(d), (g)&(h)(i) IFRS 13:IE65(e)

Financial assets/ financial liabilities	Valuation technique(s) and key input(s)	Significant unobservable input(s)	Relationship and sensitivity of unobservable inputs to fair value
1) Foreign currency forward contracts and interest rate swaps (note 34)	Discounted cash flow. Future cash flows are estimated based on forward exchange rates (from observable forward exchange rates at the end of the reporting period) and contract forward rates, discounted at a rate that reflects the credit risk of various counterparties.	N/A	N/A
2) Commodity options (note 34)	Black-Scholes model. The following variables were taken into consideration: current underlying price of the commodity, options strike price, time until expiration (expressed as a per cent of a year), implied volatility of the commodity and risk-free rate (RFR).	N/A	N/A
3) Held-for- trading shares (note 24)	Quoted bid prices in an active market.	N/A	N/A
4) Investments in unlisted shares (note 24)	Income approach. In this approach, the discounted cash flow method was used to capture the present value of the expected future economic benefits to be derived from the ownership of these investees.	Long-term revenue growth rates, taking into account management's experience and knowledge of market conditions of the specific industries, ranging from to per cent (2023: to per cent).	The higher the revenue growth rate, the higher the fair value. If the revenue growth was per cent higher/lower while all other variables were held constant, the carrying amount would increase/decrease by CU million (2023: increase/decrease by CU million).
		Long-term pre-tax operating margin taking into account management's experience and knowledge of market conditions of the specific industries, ranging from to per cent (2023: to per cent).	The higher the pre-tax operating margin, the higher the fair value. If the pre-tax operating margin was per cent higher/lower while all other variables were held constant, the carrying amount would increase/decrease by CUmillion(2023: increase/decrease by CU million).
		Weighted average cost of capital, determined using a Capital Asset Pricing Model, ranging from to per cent (2023: to per cent).	The higher the weighted average cost of capital, the lower the fair value. If the weighted average cost of capital was per cent higher/lower while all other variables were held constant, the carrying amount would decrease/increaseby CUmillion(2023: decrease/increase by CUmillion).
		Discount for lack of marketability, determined by reference to the share price of listed entities in similar industries, ranging from to per cent (2023: to per cent).	The higher the discount, the lower the fair value. If the discount was per cent higher/ lower while all other variables were held constant, the carrying amount would decrease/increase by CUmillion (2023: decrease/increase by CU million).
5) Listed corporatebond (note 24)	Quoted bid prices in an active market.	N/A	N/A

Internationa	GAAP Holdings Limited		
6) Redeemable cumulative preference shares(note3)	Discounted cash flow at a discount rate of per cent (2023: per cent) that reflects the group's current borrowing rate at the end of the reporting period.	N/A	N/A
7) Contingent consideration in a business combination (note 38) There were no trace commentary: For financial assets unobservable input	Discounted cash flow method was used to capture the present value of the group arising from the contingent consideration.	Discount rate of per cent determined using a Capital Asset Pricing Model.	The higher the discount rate, the lower the fair value. If the discount rate was per cent higher/lower while all other variables were held constant, the carrying amoun would decrease/increase by CU million (2023: decrease/increase by CU million).
		Probability-adjusted revenues and profits, with a range from CU to CU and a range from CU to CU respectively.	The higher the amounts of revenue and profit, the higher the fair value. If the revenue was per cent higher/ lower while all other variables were held constant, the carrying amount would increase/decrease by CU million (2023 increase/decrease by CU million).
There were no	transfers between Level 1 and 2 durin	ng the current or prior year.

Balance at 31 December 2024

International GAAP Holdings Limited Source All gains and losses for 2024 included in other comprehensive income relate to listed corporate bond and unquoted equities IFRS 13:93(e) held at the reporting date and are reported as changes of 'Investment revaluation reserve' (see note 43). (ii) Commentary: For recurring Level 3 fair value measurements, an entity should disclose the amount of total unrealised gains or losses for the period included in profit or loss relating to those assets and liabilities held at the end of the reporting period, and the line item(s) in profit or loss in which those unrealised gains or losses are recognised. (a)(iii) Fair value of financial assets and financial liabilities that are not measured at fair value (but fair value IFRS 13:97 disclosures are required) The fair value of the instruments classified as Level 1 (see above) was derived from quoted prices for that financial IFRS 13:97 instrument. The fair value of the instruments classified as Level 2 (see above) was calculated using the discounted cash flow IFRS 13:93(d) method. RFR adjusted by credit risk was used for discounting future cash flows. There were no financial instruments that are measured at amortised cost but for which fair value was disclosed classified as Level 3 either in current year or in prior year. (a)(iv) Financial liabilities designated as at FVTPL (with changes attributable to the change in credit risk being recognised in other comprehensive income) 31/12/2024 31/12/2023 CU CU Total cumulative gain/(loss) on changes in fair value: IFRS 7:10(a) - Cumulative gain/(loss) on changes in fair value attributable to changes in credit risk recognised in other comprehensive income (i) Cumulative gain/(loss) on changes in fair value recognised in profit or loss Cumulative gain/(loss) on changes in fair value attributable to changes in credit risk recognised in other comprehensive income: - Relating to financial liabilities derecognised during the year IFRS 7:10(d) Difference between carrying amount and contractual amount at maturity: IFRS 7:10(d) - Cumulative preference shares at fair value (note 32) - Amount payable at maturity (i) The change in fair value attributable to change in credit risk is calculated as the difference between the total change in fair value of cumulative preference shares (CU__) and the change in fair value of cumulative redeemable preference shares due to change in market risk factors alone (CU__). The change in fair value due to market risk factors was calculated using benchmark interest yield curves as at the end of the reporting period holding credit risk margin constant. The fair value of cumulative redeemable preference shares was estimated by discounting future cash flows using quoted benchmark interest yield curves as at the end of the reporting period and by obtaining lender quotes for borrowings of similar maturity to estimate credit risk margin. A qualitative assessment of the terms of the cumulative preference shares and the matching interest rate swap (see IFRS 7:11(c) note 34) indicates that the effects of changes in the cumulative preference shares' credit risk are not expected to be offset by changes in the fair value of the interest rate swap. Accordingly, management determines that presenting the effects of changes in the cumulative preference shares' credit risk in other comprehensive income would not create or enlarge an accounting mismatch in profit or loss.

Commentary:

If an entity has designated a financial liability as at FVTPL and is required to present all changes in the fair value of that liability (including the effects of changes in the credit risk of the liability) in profit or loss (because recognising changes in the credit risk of the liability in other comprehensive income would enlarge an accounting mismatch in profit or loss), it shall disclose:.

- the amount of change, during the period and cumulatively, in the fair value of the financial liability that is attributable to changes in the credit risk of that liability (see above)
- the difference between the financial liability's carrying amount and the amount the entity would be contractually required to pay at maturity to the holder of the obligation (see above)
- a detailed description of the methodology(ies) used to determine whether presenting the effects of changes in a liability's credit risk in other comprehensive income would create or enlarge an accounting mismatch in profit or loss, and a detailed description of the economic relationship between the characteristics of the liability and the characteristics of the other financial instrument, when the effects of changes in the liability's credit risk are recognised in profit or loss.

IFRS 7:31 (b) Financial risk management objectives

The group's Corporate Treasury function provides services to the business, coordinates access to domestic and international financial markets, monitors and manages the financial risks relating to the operations of the group through internal risk reports which analyses exposures by degree and magnitude of risks. These risks include market risk (including currency risk, interest rate risk and price risk), credit risk and liquidity risk.

The group seeks to minimise the effects of these risks by using derivative financial instruments to hedge these risk exposures. The use of financial derivatives is governed by the group's policies approved by the board of directors, which provide written principles on foreign exchange risk, interest rate risk, credit risk, the use of financial derivatives and non-derivative financial instruments, and the investment of excess liquidity. Compliance with policies and exposure limits is reviewed by the internal auditors on a continuous basis. The group does not enter into or trade financial instruments, including derivative financial instruments, for speculative purposes.

The Corporate Treasury function reports quarterly to the group's risk management committee, an independent body that monitors risks and policies implemented to mitigate risk exposures.

IFRS 7:33 (c) Market risk

The group's activities expose it primarily to the financial risks of changes in foreign currency exchange rates and interest rates (see below). The group enters into a variety of derivative financial instruments to manage its exposure to interest rate and foreign currency risk, including:

- forward foreign exchange contracts to hedge the exchange rate risk arising on the export of goods to [B Land] and [C Land]
- interest rate swaps to mitigate the risk of rising interest rates
- commodity option to mitigate the price risk of purchased inventory
- forward foreign exchange contracts to hedge the exchange rate risk arising on translation of the group's investment in foreign operation [name], which has the [currency] as its functional currency

Market risk exposures are measured using value-at-risk (VaR) analysis supplemented by sensitivity analysis.

Value-at-risk (VaR) analysis

There has been no change to the group's exposure to market risks or the manner in which these risks are managed and measured.

The VaR measure estimates the potential loss in pre-taxation profit over a given holding period for a specified confidence level. The VaR methodology is a statistically defined, probability-based approach that takes into account market volatilities as well as risk diversification by recognising offsetting positions and correlations between products and markets. Risks can be measured consistently across all markets and products, and risk measures can be aggregated to arrive at a single risk number. The one-day 95 per cent VaR number used by the group reflects the 95 per cent probability that the daily loss will not exceed the reported VaR.

152

IFRS 7:33(c)

IFRS 7:41

International GAAP Holdings Limited

VaR methodologies employed to calculate daily risk numbers include the historical and variance-covariance approaches. In addition to these two methodologies, Monte Carlo simulations are applied to the various portfolios on a monthly basis to determine potential future exposure.

Historical VaR (95%, one-day) by risk type

		Average		Minimum		Maximum	Year end		
	31/12/2024	31/12/2023	31/12/2024 31/12/2023		31/12/2024	31/12/2023	31/12/2024	31/12/2023	
	CU	CU	CU	CU	CU	CU	CU	CU	
Foreign exchange									
Interest rate									
Diversification									
Total VaR exposure									

The group's VaR should be interpreted in light of the limitations of the methodologies used. These limitations include the following:

- Historical data may not provide the best estimate of the joint distribution of risk factor changes in the future and may fail to capture the risk of possible extreme adverse market movements which have not occurred in the historical window used in the calculations
- VaR using a one-day time horizon does not fully capture the market risk of positions that cannot be liquidated or hedged within one day
- VaR using a 95 per cent confidence level does not reflect the extent of potential losses beyond that percentile

These limitations and the nature of the VaR measure mean that the group can neither guarantee that losses will not exceed the VaR amounts indicated nor that losses in excess of the VaR amounts will not occur more frequently than once in 20 business days.

While VaR captures the group's daily exposure to currency and interest rate risk, sensitivity analysis evaluates the impact of a reasonably possible change in interest or foreign currency rates over a year. The longer time frame of sensitivity analysis complements VaR and helps the group to assess its market risk exposures. Details of sensitivity analysis for foreign currency risk and for interest rate risk are set below.

IFRS 7:33-34

(c)(i) Foreign currency risk management

The group undertakes transactions denominated in foreign currencies; consequently, exposures to exchange rate fluctuations arise. Exchange rate exposures are managed within approved policy parameters utilising forward foreign exchange contracts.

The carrying amounts of the group's foreign currency denominated monetary assets and monetary liabilities at the reporting date are as follows:

Assets		Liabilities	
31/12/2023	31/12/2024	31/12/2023	31/12/2024
CU	CU	CU	CU

1.1541411414

[Currency B]

[Currency C]

Other

Foreign currency sensitivity analysis

The group is mainly exposed to the currency of [B Land] ([Currency B]) and the currency of [C Land] ([Currency C]).

IFRS 7:34(a) IFRS 7:40(b) The following table details the group's sensitivity to a __ per cent increase and decrease in currency units against the relevant foreign currencies. __ per cent is the sensitivity rate used when reporting foreign currency risk internally to key management personnel and represents management's assessment of the reasonably possible change in foreign exchange rates. The sensitivity analysis includes only outstanding foreign currency denominated monetary items and adjusts their translation at the year-end for a __ per cent change in foreign currency rates.

International GAAP Holdings Limited Source

The sensitivity analysis includes external loans as well as loans to foreign operations within the group where the denomination of the loan is in a currency other than the currency of the lender or the borrower. A positive number below indicates an increase in profit and other equity where currency units strengthens __ per cent against the relevant currency. For a __ per cent weakening of currency units against the relevant currency, there would be a comparable impact on the profit and other equity, and the balances below would be negative.

[Where the assumptions used have changed from previous years, include detail of and reasons for those changes] IFRS 7:40(c)

		[Currency B] impact		[Currency C] impact
	31/12/2024 31/12/20		31/12/2023 31/12/2024	
	CU	CU	CU	CU
Profit or loss		(i)		(iii)
Other equity		(ii)		(iv)

- (i) This is mainly attributable to the exposure outstanding on [Currency B] receivables and payables in the group at the reporting date.
- (ii) This is the result of the changes in fair value of derivative instruments designated as cash flow hedges and net investment hedges.
- (iii) This is mainly attributable to the exposure to outstanding [Currency C] payables at the reporting date.
- (iv) This is mainly as a result of the changes in fair value of derivative instruments designated as cash flow hedges.
- The group's sensitivity to foreign currency has decreased during the current year mainly due to the disposal of [Currency B] IFRS 7:33(c) denominated investments and the reduction in [Currency B] sales in the last quarter of the financial year which has resulted in lower [Currency B] denominated trade receivables.
 - In management's opinion, the sensitivity analysis is unrepresentative of the inherent foreign exchange risk as the year end exposure does not reflect the exposure during the year.

[Currency B] denominated sales are seasonal with lower sales volumes in the last quarter of the financial year, which results in a reduction in [Currency B] receivables at year end.

In addition, the change in equity due to a __ per cent change in the currency units against all exchange rates for the translation of net investment hedging instruments would be a decrease of CU__ million (2023: CU__ million). However, there would be no net effect on equity because there would be an offset in the currency translation of the foreign operation.

Foreign exchange forward contracts IFRS 7:22B

It is the policy of the group to enter into foreign exchange forward contracts to manage the foreign currency risk associated with anticipated sales and purchase transactions out to 6 months within __ per cent to __ per cent of the exposure generated. Basis adjustments are made to the initial carrying amounts of inventories when the anticipated purchases take place.

In the current year, the group has designated certain forward contracts as a hedge of its net investment in [name of foreign operation], which has [Currency B] as its functional currency. The group's policy has been reviewed and, due to the increased volatility in [Currency B], it was decided to hedge up to 50 per cent of the net assets of the [name of foreign operation] for foreign currency forward risk arising on translation of the foreign operation. The group utilises a rollover hedging strategy, using contracts with terms of up to 6 months. Upon the maturity of a forward contract, the group enters into a new contract designated as a separate hedging relationship.

For hedges of highly probable forecast sales and purchases, as the critical terms (i.e. the notional amount, life and underlying) of the foreign exchange forward contracts and their corresponding hedged items are the same, the group performs a qualitative assessment of effectiveness and it is expected that the value of the forward contracts and the value of the corresponding hedged items will systematically change in opposite direction in response to movements in the underlying exchange rates. The group uses the hypothetical derivative method for the hedge effectiveness assessment and measurement of hedge ineffectiveness. As for the hedge of the net investment in [name of foreign operation], the group assesses effectiveness by comparing the nominal amount of the net assets designated in the hedge relationship with the nominal amount of the hedging instruments. This is a simplified approach because the currency of the exposure and hedging instruments perfectly match and the group excludes from the designation the foreign currency basis spread.

[name of foreign operation] (iii)

Investment in

[name of foreign operation] (iii)

- (i) The group expects to supply goods to customers in [*B Land*]. The expected sales are highly probable. The group has entered into foreign exchange forward contracts (for terms not exceeding three months) to hedge the exchange rate risk arising from these anticipated future transactions. It is anticipated that the sales will take place during the first three months of the next financial year, at which time the amount deferred in equity will be reclassified to profit or loss.
- (ii) The group expects to purchase raw materials from suppliers in [B Land] and [C Land]. The expected purchases are highly probable. The group has entered into foreign exchange forward contracts (for terms not exceeding six months) to hedge the exchange rate risk arising from these anticipated future purchases.
 - As at 31 December 2024, the aggregate amount of gains under foreign exchange forward contracts deferred in the cash flow hedge reserve relating to these anticipated future purchase transactions is CU__ million (2023: gains of CU__ million). It is anticipated that the purchases will take place during the first six months of the next financial year at which time the amount deferred in equity will be removed from equity and included in the carrying amount of the raw materials. It is anticipated that the raw materials will be converted into inventory and sold within 12 months after purchase.
- (iii) The group had, in previous years, hedged its investment in [name of foreign operation] against the foreign currency risk arising from the translation of [name of foreign operation]'s net assets from [Currency A] into the group's functional currency. However, the group ceased to hedge this investment in 2019 based on management's expectation of the continued strength of [Currency A]. The investment in [name of foreign operation] was fully disposed of in the current year and the cumulative amount arising from the previous hedging relationships which was deferred in equity was reclassified to profit or loss on disposal.

⁽i) At the start of the third quarter of 2024, the group reduced its forecasts on sales of electronic equipment to [B Land] due to increased local competition and higher shipping costs. The group had previously hedged CU_ million of future sales of which CU_ are no longer expected to occur, and CU_ remain highly probable. Accordingly, the group has reclassified CU_ of gains on foreign currency forward contracts relating to forecast transactions that are no longer expected to occur from the cash flow hedging reserve to profit or loss.

Commentary:

The tables above provide an example of summary quantitative data about exposure to foreign exchange risks at the end of the reporting period that an entity may provide internally to key management personnel. Other presentations may also be appropriate.

IFRS 7:33-34 (c)(ii) Interest rate risk management

The group is exposed to interest rate risk because entities in the group borrow funds at both fixed and floating interest rates. The risk is managed by the group by maintaining an appropriate mix between fixed and floating rate borrowings, and by the use of interest rate swap contracts. Hedging activities are evaluated regularly to align with interest rate views and defined risk appetite; ensuring the most cost-effective hedging strategies are applied.

The group's exposures to interest rates on financial assets and financial liabilities are detailed in the liquidity risk management section of this note.

The group is exposed to the following risk-free rates: [SOFR, EURIBOR, SONIA]. The exposures arise on derivatives and non-derivative financial assets and liabilities (e.g. bills of exchange, debt and leases).

Some of the group cash flow and fair value hedge relationships were affected by the interest rate benchmark reform. All the affected hedged items and hedging instruments were transitioned to risk-free rates. The hedge documentation has been amended accordingly.

Interest rate sensitivity analysis

IFRS 7:34(a) IFRS 7:40(b) The sensitivity analyses below have been determined based on the exposure to interest rates for both derivatives and non-derivative instruments at the reporting date. For floating rate liabilities, the analysis is prepared assuming the amount of liability outstanding at the reporting date was outstanding for the whole year. A __ per cent increase or decrease is used when reporting interest rate risk internally to key management personnel and represents management's assessment of the reasonably possible change in interest rates.

IFRS 7:40(c)

[Where the assumptions used have changed from previous years, include detail of and reasons for those changes]

IFRS 7:40(a)

If interest rates had been __ per cent higher/lower and all other variables were held constant, the group's:

- profit for the year ended 31 December 2024 would decrease/increase by CU_ million (2023: decrease/increase by CU_ million). This is mainly attributable to the group's exposure to interest rates on its variable rate borrowings
- other comprehensive income would decrease/increase by CU_ million (2023: decrease/increase by CU_ million) mainly as a result of the changes in the fair value of investment in corporate bonds classified as at FVTOCI.

IFRS 7:33(c)

The group's sensitivity to interest rates has decreased during the current year mainly due to the reduction in variable rate debt instruments and the increase in interest rate swaps to swap floating rate debt to fixed rate debt.

Interest rate swap contracts

IFRS 7:22A IFRS 7:22B IFRS 7:33-34 Under interest rate swap contracts, the group agrees to exchange the difference between fixed and floating rate interest amounts calculated on agreed notional principal amounts. Such contracts enable the group to mitigate the risk of changing interest rates on the fair value of issued fixed rate debt held and the cash flow exposures on the issued variable rate debt held. The fair value of interest rate swaps at the reporting date is determined by discounting the future cash flows using the curves at the reporting date and the credit risk inherent in the contract, and is disclosed below. The average interest rate is based on the outstanding balances at the end of the financial year.

IFRS 7:22B IFRS 7:23D IFRS 7:23E As the critical terms of the interest rate swap contracts and their corresponding hedged items are the same, the group performs a qualitative assessment of effectiveness and it is expected that the value of the interest rate swap contracts and the value of the corresponding hedged items will systematically change in opposite direction in response to movements in the underlying interest rates. The main source of hedge ineffectiveness in these hedge relationships is the effect of the counterparty and the group's own credit risk on the fair value of the interest rate swap contracts, which is not reflected in the fair value of the hedged item attributable to the change in interest rates. No other sources of ineffectiveness emerged from these hedging relationships.

IFRS 7:23B IFRS 7:24A(b) The following tables detail various information regarding interest rate swap contracts outstanding at the end of the reporting period and their related hedged items. Interest rate swap contract assets and liabilities are included in note 34.

IFRS 7:33-34

(c)(iii) Commodity price risk

Commodity price risk in the group primarily arises from price fluctuations and the availability of [type of commodity]. The group may enter into derivative transactions to limit these risks. Hedging activities are evaluated regularly to align with group expectations about the price changes and defined risk appetite; ensuring the most cost-effective hedging strategies are applied.

IFRS 7:40

Commodity price sensitivity analysis

If the commodity prices of the hedged commodity had been __ per cent higher (lower) as of December 2024, profit after tax would have been CU_ million (2023: CU_ million) higher (lower).

If the commodity prices of the hedging transactions accounted for using cash flow hedge accounting had been __ per cent higher (lower) as of December 2024, equity would have been CU_ million (2023: CU_ million) higher (lower).

Commodity options

It is the policy of the group to enter into commodity options to manage the commodity price risk associated with anticipated purchase transactions out to 24 months. The group policy is to hedge up to 80 per cent of exposure generated within 3 months, about 60 per cent of exposure with maturity between 3 months and 12 months and no more than 40 per cent of exposure generated in 2 years. Basis adjustments are made to the initial carrying amounts of inventories when the anticipated purchases take place. The group always designates the intrinsic value of the options.

In the current year, the group has designated certain commodity options as a cash flow hedge of highly probable purchases. Because the critical terms (i.e. the quantity, maturity and underlying) of the commodity option and their corresponding hedged items are the same, the group performs a qualitative assessment of effectiveness and it is expected that the intrinsic value of the commodity option and the value of the corresponding hedged items will systematically change in opposite direction in response to movements in the price of underlying commodity if the price of the commodity increases above the strike price of the derivative.

The main source of hedge ineffectiveness in these hedge relationships is the effect of the counterparty and the group's own credit risk on the fair value of the option contracts, which is not reflected in the fair value of the hedged item and if the forecast transaction will happen earlier or later than originally expected.

IFRS 7:23C IFRS 7:23E The following tables detail the commodity options outstanding at the end of the reporting period, as well as information regarding their related hedged items. Commodity options are presented in the line 'Derivative financial instruments' within the statement of financial position (see note 34 for further details):

IFRS 7:33-34 (c)(iv) Other price risks

The group is exposed to equity price risks arising from equity investments.

Equity investments in unlisted entities (see note 24) are held for strategic rather than trading purposes. The group does not actively trade these investments.

The group invested in a portfolio of listed shares which are held for trading (see note 24). This type of investment is approved by the board [or insert name of the relevant committee] as the alternative to investment in money market funds in order to generate higher investment return on the spare funds. In accordance with the policy, the group may invest only in the entities that form part of the following indices: FTSE 100, DJIA, S&P 500, NASDAQ 100, etc.

Equity price sensitivity analysis

IFRS 7:40(b)

The sensitivity analyses below have been determined based on the exposure to equity price risks at the reporting date.

IFRS 7:40(a)

If equity prices had been __ per cent higher/lower:

- net profit for the year ended 31 December 2024 and 2023 would increase/decrease by CU_ million (2023: increase/decrease by CU_ million) as a result of the changes in fair value of the investments in listed shares
- other comprehensive income would increase/decrease by CU__ million (2023: increase/decrease by CU__ million) as a result of the changes in fair value of the investments in equity instruments

The methods and assumptions used in preparing the sensitivity analysis above have not changed significantly from the prior year.

[Where the assumptions used have changed from previous years, include detail of and reasons for those changes]

International GAAP Holdings Limited Source (d) Credit risk management IFRS 7:33-34 IFRS 7:35B Note 62(d)(ii) details the group's maximum exposure to credit risk and the measurement bases used to determine expected credit losses. In order to minimise credit risk, the group has adopted a policy of only dealing with creditworthy counterparties and IFRS 7:35F(a)(i) obtaining sufficient collateral, where appropriate, as a means of mitigating the risk of financial loss from defaults. The group only transacts with entities that are rated the equivalent of investment grade. Investments in instruments, including bills of exchange, debentures and redeemable notes as detailed in note 24, where the counterparties have a minimum BBB- credit rating, are considered to have low credit risk for the purpose of impairment assessment. The credit rating information is supplied by independent rating agencies where available and, if not available, the group uses other publicly available financial information and its own trading records to rate its major customers. The group's exposure and the credit ratings of its counterparties are continuously monitored and the aggregate value of transactions concluded is spread amongst approved counterparties. Before accepting any new customer, a dedicated team responsible for the determination of credit limits uses an external IFRS 7:34(c) credit scoring system to assess the potential customer's credit quality and defines credit limits by customer. Limits and scoring attributed to customers are reviewed and approved twice a year by the risk management committee. 80 per cent of the trade receivables have the best credit scoring attributable under the external credit scoring system used by the group. Credit approvals and other monitoring procedures are also in place to ensure that follow-up action is taken to recover overdue debts. Furthermore, the group reviews the recoverable amount of each trade debt and debt investment on an individual basis at the end of the reporting period to ensure that adequate loss allowance is made for irrecoverable amounts. In this regard, the directors of the parent company consider that the group's credit risk is significantly reduced. Trade receivables consist of a large number of customers, spread across diverse industries and geographical areas. Ongoing credit evaluation is performed on the financial condition of accounts receivable and, where appropriate, credit guarantee insurance cover is purchased. Of the trade receivables balance at the end of the year, CU million (2023: CU million) is due from Entity A, the group's IFRS 7:B8 largest customer. Apart from this, the group does not have significant credit risk exposure to any single counterparty or any IFRS 7:34(c) IFRS 7:35B(c) group of counterparties having similar characteristics. The group defines counterparties as having similar characteristics if they are related entities. Concentration of credit risk related to Entity A did not exceed 20 per cent of gross monetary assets at any time during the year. Concentration of credit risk to any other counterparty did not exceed 5 per cent of gross monetary assets at any time during the year. The concentration of credit risk is limited due to the fact that the customer base is large and unrelated. The credit risk on liquid funds and derivative financial instruments is limited because the counterparties are banks with high IFRS 7:B10(b) credit-ratings assigned by international credit-rating agencies. In addition, the group is exposed to credit risk in relation to financial guarantees given to banks. The group's maximum IFRS 7:B10(c)

exposure in this respect is the maximum amount the group could have to pay if the guarantee is called on (see below). As at

IFRS 9, however, no loss allowance was recognised in profit or loss because the premium received less cumulative amount

31 December 2024, an amount of CU_ (2023: CU_) has been estimated as a loss allowance in accordance with

recognised in profit or loss was higher than the expected amount of loss allowance (see note 37).

International GAAP Holdings Limited

IFRS 7:35K(b)

(d)(i) Collateral held as security and other credit enhancements

The group does not hold any collateral or other credit enhancements to cover its credit risks associated with its financial assets, except that the credit risk associated with finance lease receivables is mitigated because they are secured over the leased store equipment. The carrying amount of finance lease receivables amounts to CU_ million (2023: CU_ million) and the fair value of the leased assets is estimated to be approximately CU_ million (2023: CU_ million). The group is not permitted to sell or repledge the collateral in the absence of default by the lessee. There have not been any significant changes in the quality of the collateral held for finance lease receivables. The group has not recognised a loss allowance for the finance lease receivables as a result of these collaterals.

Commentary:

For all financial instruments to which the impairment requirements in IFRS 9 are applied, IFRS 7:35K(b) and (c) specify that entities should disclose the following:

- a narrative description of collateral held as security and other credit enhancements, including:
 - a description of the nature and quality of the collateral held
 - an explanation of any significant changes in the quality of that collateral or credit enhancements as a result of deterioration or changes in the collateral policies of the entity during the reporting period
- information about financial instruments for which an entity has not recognised a loss allowance because of the collateral
- quantitative information about the collateral held as security and other credit enhancements (for example, quantification of the extent to which collateral and other credit enhancements mitigate credit risk) for financial assets that are credit-impaired at the reporting date. For all financial instruments within the scope of IFRS 7, but to which the impairment requirements in IFRS 9 are not applied, IFRS 7:36(b) specifies that entities should give a description of collateral held as security and of other credit enhancements, and their financial effect (e.g. a quantification of the extent to which collateral and other credit enhancements mitigate credit risk) in respect of the amount that best represents the maximum exposure to credit risk.

IFRS 7:7 IFRS 7:31 IFRS 7:35K(a)

(d)(ii) Overview of the group's exposure to credit risk

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the group. As at 31 December 2024, the group's maximum exposure to credit risk without taking into account any collateral held or other credit enhancements, which will cause a financial loss to the group due to failure to discharge an obligation by the counterparties and financial guarantees provided by the group arises from:

- the carrying amount of the respective recognised financial assets as stated in the consolidated statement of financial position
- IFRS 7:35M IFRS 7:B10(c)
- the maximum amount the entity would have to pay if the financial guarantee is called upon, irrespective of the likelihood of the guarantee being exercised as disclosed in note 62(e)(i). The related loss allowance is disclosed in note 38.

The group's current credit risk grading framework comprises the following categories:

Category	Description	Basis for recognising expected credit losses
Performing	The counterparty has a low risk of default and does not have any past-due amounts	12-month ECL
Doubtful	Amount is >30 days past due or there has been a significant increase in credit risk since initial recognition	Lifetime ECL – not credit-impaired
In default	Amount is >90 days past due or there is evidence indicating the asset is credit- impaired	Lifetime ECL – credit-impaired
Write-off	There is evidence indicating that the debtor is in severe financial difficulty and the group has no realistic prospect of recovery	Amount is written off

International GAAP Holdings Limited

Commentary:

IFRS 7:35M requires the disclosure of information about an entity's credit risk exposure and significant concentrations of credit risk by credit risk grading at the reporting date. The number of credit risk rating grades used to disclose such information should be consistent with the number that the entity reports to key management personnel for credit risk management purposes. However, in some cases, delinquency and past due information may be the only borrower-specific information available without undue cost or effort, which is used to assess whether credit risk has increased significantly since initial recognition. In such cases, an entity should provide an analysis of those financial assets by past due status.

IFRS 7:35M IFRS 7:35N IFRS 7:36(a) The tables below detail the credit quality of the group's financial assets, contract assets and financial guarantee contracts, as well as the group's maximum exposure to credit risk by credit risk rating grades:

31/12/2024	Note _	External credit rating	Internal credit rating	12-month or lifetime ECL?	Gross carrying amount (i)	Loss allowance CU	Net carrying amount (i)

⁽i) For financial guarantee contracts, the gross carrying amount represents the maximum amount the group has guaranteed under the respective contracts, and the net carrying amount represents the loss allowance recognised for the contracts.

⁽ii) For trade receivables, finance lease receivables and contract assets, the group has applied the simplified approach in IFRS 9 to measure the loss allowance at lifetime ECL. The group determines the expected credit losses on these items by using a provision matrix, estimated based on historical credit loss experience based on the past due status of the debtors, adjusted as appropriate to reflect current conditions and estimates of future economic conditions. Accordingly, the credit risk profile of these assets is presented based on their past due status in terms of the provision matrix. Notes 27, 29 and 31 include further details on the loss allowance for these assets respectively.

International GAAP Holdings Limited

The loss allowance on corporate bonds measured at FVTOCI is recognised against other comprehensive income and accumulated in the investment revaluation reserve. See note 43.

IFRS 7:36(a)-(b) IFRS 7:B10(b) The carrying amount of the group's financial assets at FVTPL as disclosed in note 24 best represents their respective maximum exposure to credit risk. The group holds no collateral over any of these balances.

Commentary:

For all financial instruments within the scope of IFRS 7, but to which the impairment requirements in IFRS 9 are not applied, IFRS 7:36(a) requires an entity to disclose by class of financial instrument the amount that best represents the entity's maximum credit risk exposure at the end of the reporting period, excluding the effect of any collateral and other amounts that do not qualify for offset in accordance with IAS 32. Examples of financial instruments that are within the scope of IFRS 7 but that are not subject to the IFRS 9 impairment requirements include:

- financial assets and derivatives measured at FVTPL
- financial guarantee contracts issued measured at FVTPL
- loan commitments issued measured at FVTPL.

Equity investments, regardless of whether they are measured at FVTPL or FVTOCI, are also in the scope of IFRS 7 but not subject to the IFRS 9 impairment requirements; however, they do not give rise to an exposure to credit risk and therefore are not subject to the IFRS 7 credit risk disclosures.

IFRS 7:33-34

(e) Liquidity risk management

Ultimate responsibility for liquidity risk management rests with the board of directors, which has established an appropriate liquidity risk management framework for management of the group's short, medium and long-term funding and liquidity management requirements. The group manages liquidity risk by maintaining adequate reserves, banking facilities and reserve borrowing facilities, by continuously monitoring forecast and actual cash flows, and by matching the maturity profiles of financial assets and liabilities. Details of additional undrawn facilities that the group has at its disposal to further reduce liquidity risk are set out below.

IFRS 7:34-35 IFRS 7:39(c)

(e)(i) Liquidity and interest risk tables

The following tables detail the group's remaining contractual maturity for its non-derivative financial liabilities with agreed repayment periods. The tables have been drawn up based on the undiscounted cash flows of financial liabilities based on the earliest date on which the group can be required to pay. The table includes both interest and principal cash flows. To the extent that interest cash flows are floating rate, the undiscounted amount is derived from interest rate curves at the reporting date.

IFRS 7:B10(c)

The amounts included in the following table for financial guarantee contracts are the maximum amount the group could be forced to settle under the arrangement for the full guaranteed amount if that amount is claimed by the counterparty to the guarantee (see note 38). Based on expectations at the end of the reporting period, the group considers that it is more likely than not that no amount will be payable under the arrangement. However, this estimate is subject to change depending on the probability of the counterparty claiming under the guarantee which is a function of the likelihood that the financial receivables held by the counterparty which are guaranteed suffer credit losses.

The contractual maturity is based on the earliest date on which the group may be required to pay.

Commentary:

The tables below include the weighted average effective interest rate and the carrying amount of the respective financial liabilities as reflected in the consolidated statement of financial position as an example of summary quantitative data about exposure to interest rates at the end of the reporting period that an entity may provide internally to key management personnel.

	The group manages its capital to ensure that entities in the group will be able to cont maximising the return to shareholders through the optimisation of the debt and equ remains unchanged from 2023.		
	The capital structure of the group consists of net debt and equity of the group.		
	Debt is defined by the group as long- and short-term borrowings and lease liabilities consideration, and financial guarantee contracts) as disclosed in notes 32, 33 and 36 deducting cash and cash equivalents (including cash and bank balances in a disposal	. Net debt is defined as	

Equity includes capital, reserves, retained earnings, and non-controlling interests as disclosed in notes 40 to 51.

The group is not subject to any externally imposed capital requirements.

The group's risk management committee reviews the capital structure on a semi-annual basis. As part of this review, the committee considers the cost of capital and the risks associated with each class of capital. The group has a target gearing ratio of __ per cent to __ per cent determined as the proportion of net debt to equity. The gearing ratio at 31 December 2024 of __ per cent (see below) was at below the target range, and has returned to a more typical level of __ per cent since the reporting date.

Appendix 1—Areas of the illustrative financial statements affected by climate change

Risks and uncertainties arising from climate change or the transition to a lower carbon economy could affect the following areas of the financial statements.

Section	Area	Commentary
3. Accounting policies	Going concern assessment	IAS 1 requires disclosure of material uncertainties relating to events or conditions which may cast significant doubt upon an entity's ability to continue as a going concern, or of significant judgements made in concluding there are no material uncertainties related to the going concern assumption. Such uncertainties may arise from climate-related factors. For example, the introduction of legislation directly affecting an entity's business model, or giving rise to increased compliance costs, may cast significant uncertainty upon the entity's ability to continue as a going concern.
		Alternatively, management may have applied significant judgement about the effectiveness of the entity's planned response in concluding that there is no material uncertainty.
Critical accounting judgements and key sources of estimation uncertainty	Impairment of non-financial assets	Exposure to climate-related risks could be an indicator of impairment, for example, a significant decline in demand for products or services, or new regulations that have a negative impact on an entity. Such factors could also affect the estimated cash flows used in determining the recoverable amount of an asset or group of assets.
16. Goodwill		
17. Intangible assets		Sensitivity disclosures under IAS 36:134 should reflect all reasonably possible changes in the values assigned to key assumptions. Unlike
18. Property, plant and equipment		IAS 1:125, this is not limited to changes within the next year and should address all reasonably possible changes over the period of the impairment assessment.
21. Associates		An entity should consider the long-term impacts of climate change and
22. Joint ventures		consider disclosing climate-related assumptions as key assumptions.
30. Leases (group as a lessee)		
3. Accounting policies18. Property, plant and equipment17. Intangible assets	Changes in the recognition, useful life or residual value of assets	When climate-related risks are significant, concerns over viability could mean that the criterion (in IAS 16:7 for property, plant and equipment and paragraph 21 of IAS 38 <i>Intangible Assets</i> for intangible assets) that costs are only recognised as an asset when it is probable that future economic benefits associated with the asset will flow to the entity is not met.
30. Leases (group as a lessee)		Adaption of an entity's business to address climate change issues could also result in additional research and development activities, requiring consideration of the criteria for recognition as intangible assets under IAS 38:57.
		In addition, intangible assets related to carbon offset schemes may need to be recognised.
		Climate-related risks may also affect the depreciation or amortisation of assets (property, plant and equipment, right-of-use assets and intangible assets) through a change in their useful lives or residual values.
		Such factors should be incorporated into a review of an asset's useful life and residual value.

39. Provisions 55. Contingent liabilities	Provisions, contingencies and onerous contracts	The pace and severity of climate change, as well as accompanying government policy and regulatory measures, may affect the recogn measurement and disclosure of provisions, contingencies and onerous contracts.
		Major assumptions about future events must be disclosed, which include an explanation of how climate-related risks have been fact into the best estimate of the provision. Information may also need be included to help users understand the potential effect of chang major assumptions used.
Critical accounting judgements and key sources of estimation uncertainty	Key judgements and estimates disclosures	If assumptions related to the impact of climate change or the trans to a lower carbon economy have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the next financial year, then information about the assumpt should be disclosed in accordance with IAS 1:125. This includes lor term assumptions which are at risk of significant revision within the next year.
		It may also be necessary to disclose other uncertainties that are neexpected to cause a material adjustment within one year to enable better understanding of the financial statements. Such disclosure however, be clearly separated from uncertainties that have a significant risk of causing material adjustment to the carrying amount of asseliabilities within the next financial year, per IAS 1:125.
		In the process of applying the entity's accounting policies, manage may make various judgements, other than those involving estimat that can significantly affect the amounts recognised in the financia statements. Such judgements are required to be disclosed in account lAS 1:122.
		The IFRS Foundation has published educational material that incluan example of an entity operating in an industry particularly affect by climate-related matters. In the example, the entity tests an asset impairment applying IAS 36 but recognises no impairment loss. The entity should disclose judgements management has made, for examinidentifying the asset's cash-generating unit, if such judgements could significantly affect the amounts recognised in the entity's financial statements.
		The transition to a low carbon economy will also give rise to new transactions for which significant judgements may be required in developing accounting policies. For example, 'green' bonds, carbor offsetting or emission trading schemes.
4. Critical accounting judgements and key sources of estimation uncertainty	Information that is relevant to understanding the financial statements	If users of the financial statements could reasonably expect that cleaning change-related risks will have significant impact on the parent come and this would qualitatively influence their decisions, then manages should clearly disclose information about the climate change assumptions that they have made (if not disclosed elsewhere), includisclosures around the sensitivity of those assumptions. This is to enable users to understand the basis of forecasts on which the fin statements are prepared. This may mean that disclosure is provide even if the effects of climate change on the parent company may contain the statement of the statement of the effects of climate change on the parent company may contain the statement of the effects of climate change on the parent company may contain the statement of the effects of climate change on the parent company may contain the effects of th

 4. Critical accounting judgements and key sources of estimation uncertainty 24. Investments 27. Contract assets 29. Finance lease receivables 31. Trade and other receivables 	Impairment of financial assets	Climate-related events, such as floods and hurricanes, can affect the creditworthiness of borrowers due to business interruption, impacts on economic strength, asset values and unemployment. In addition, borrowers' ability to pay debts might be diminished if they are in industries that have fallen out of favour and are therefore depressed. The impact on receivables in entities operating in non-financial industr is likely to be less severe because the economic conditions are less like to change during the collection period of the debtors. However, where significant climate-related event has occurred, the effect of this event of trade receivables at balance sheet date should be assessed.
18. Property, plant and equipment19. Investment property62. Financial Instruments	Assets measured on a fair value basis	The requirements of IFRS 13 on fair value measurement apply to a broad range of assets and liabilities whether for measurement or disclosure purposes. This includes assets or cash-generating units tested for impairment on a fair value less costs of disposal basis, as well as the initial measurement at fair value of assets acquired in a business combination. The broad scope of IFRS 13's requirements could mean that the effects of climate-related risks on fair values become significant for entities whose own business might not be thought of as being directly affected by the more apparent physical and transition risks of climate change.
58. Retirement benefit plans	Impact on pension risks from climate	Pension trustees are required to consider all material financial risks, including the exposure of pension assets to climate change risk. Demographic assumptions and investment performance can vary significantly under different climate change scenarios, affecting the measurement of pension asset and liability balances at the balance sheet date.
35. Deferred tax	Recoverability of deferred tax assets	Climate-related factors may cause a decrease in estimates of future taxable profits. Assumptions underlying the forecast of future taxable profits that supports the recoverability of deferred tax assets should be consistent with assumptions underlying other profit forecasts used in the preparation of the financial statements or disclosed in the narrative reports.
 4. Critical accounting judgements and key sources of estimation uncertainty 12. Income Tax 39. Provisions 55. Contingent liabilities 	New levies or taxes	New levies or taxes may be introduced to encourage decarbonisation. Any levy liabilities should be recognised as the obligation is triggered under law (per IFRIC 21 <i>Levies</i>) and any income tax effects should be incorporated into normal IAS 12 accounting. Care should be taken whe distinguishing between a levy and income tax and the application of IFRIC 21 or IAS 12 as this has proven to be a challenging area as new taxes/levies have been introduced in the past.
17. Intangible assets	Carbon trading schemes	There are currently different acceptable approaches to account for carbon trading schemes. The accounting policy applied by the entity should be disclosed if this is relevant for users to understand the financial statements.

57. Share-based payments	Incentive schemes	Entities may introduce schemes to incentivise management to decarbonise. Such schemes may either fall in the scope of IAS 19 or IFRS 2 depending on the nature of the awards. Decarbonisation targets should be treated as any other uncertainties or actuarial assumptions for IAS 19 benefits, and as any other performance conditions for share based payments under IFRS 2.
25. Inventories	Net realisable value of inventories	The net realisable value of inventories could be impacted by climate-related factors, when either selling prices decline or costs of completio increase. Changing consumer behaviour could cause a fall in demand for a product, raw material sourcing constraints could cause an increas in completion costs, a regulatory change could render inventories obsolete, or a significant weather event could cause physical damage to inventories. If such instances mean that the cost of inventory is no long recoverable, IAS 2 <i>Inventories</i> requires that such inventories be written down to their net realisable value.
Revenue Operating Segments	Segmental and disaggregated revenue disclosures	IFRS 8 requires disclosure of information about operating segments. Such information may only be aggregated when segments have similar economic characteristics and are similar in various other respects as so out in IFRS 8:12. The anticipated impact of climate change is an indicate that segments may not have similar economic characteristics in the long term. IFRS 15:114 requires revenue recognised from contracts with customer to be disaggregated into categories that depict how the nature, amoun timing and uncertainty of revenue and cash flows are affected by economic factors. This could include climate-related factors which result in different categories of revenue being subject to substantially different risks or opportunities.
7. Profit for the year	Government grants	Governments may increasingly provide government grants and other forms of government assistance to entities to encourage the transition a lower carbon economy in line with the government's commitments to reduce greenhouse gas emissions. IAS 20 Accounting for Government Grants and Disclosure of Government Assistance prescribes the accounting for, and disclosure of, government grants and other forms of government assistance. Whether government grants which are intended to compensate entities for costs related to 'green' capital or operating expenditure are within the scope of IAS 20 and how such grants should be recognised in profit or loss on a systematic basis, will depend on the nature of the grants and the conditions attaching to them.

Deloitte.

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited ("DTTL"), its global network of member firms, and their related entities (collectively, the "Deloitte organisation"). DTTL (also referred to as "Deloitte Global") and each of its member firms and related entities are legally separate and independent entities, which cannot obligate or bind each other in respect of third parties. DTTL and each DTTL member firm and related entity is liable only for its own acts and omissions, and not those of each other. DTTL does not provide services to clients. Please see www.deloitte.com/about to learn more.

Deloitte provides industry-leading audit and assurance, tax and legal, consulting, financial advisory and risk advisory services to nearly 90% of the Fortune Global 500® and thousands of private companies. Our people deliver measurable and lasting results that help reinforce public trust in capital markets, enable clients to transform and thrive, and lead the way toward a stronger economy, a more equitable society and a sustainable world. Building on its 175-plus year history, Deloitte spans more than 150 countries and territories. Learn how Deloitte's more than 450,000 people worldwide make an impact that matters at www.deloitte.com.
